

21 January 2022

Quarterly Activities and Cashflow Report for the period ending 31 December 2021

Boab Metals Limited (ASX: **BML**) (“**Boab**” or “**Company**”) is pleased to provide the following activity and cashflow report for the quarter ending 31 December 2021. The quarter saw significant progress toward the development of the Company’s 75% owned Sorby Hills Lead-Silver-Zinc Project (“**Sorby Hills**” or “**the Project**”), located in the Kimberley Region of Western Australia.

HIGHLIGHTS

- **Updated Mineral Resource Estimate for Sorby Hills** 47.3Mt at 4.1% Pb Eq (3.1% Pb, 35g/t Ag) and 0.4% Zn containing 1.47Mt Pb, 53Moz Ag and 0.21kt Zn, including:
 - **14% increase in Measured and Indicated Resources versus the PFS Resource**, and a 7% increase versus the April 2021 estimate; and
 - **Inaugural 1.0Mt Indicated Resource reported for the Beta Deposit.**
- **Sorby Hills DFS Metallurgical Testwork Results** confirming:
 - separate flotation of Oxidised and Fresh Ore will deliver **significant uplift in metal recovery across the Life of Mine**;
 - **Lead recoveries of up to 95% (Fresh Ore) and up to 90% (Oxidised Ore)**; and
 - **Silver recoveries of up to 87%Ag (Fresh Ore) and up to 92% (Oxidised Ore).**
- **Sorby Hills Site Visit Undertaken by NAIF and Commercial Banks.**
- **The Company has a cash balance of A\$8.4M as at 31 December 2021** and is well funded to continue progressing Sorby Hills to a Final Investment Decision (“**FID**”).

Boab Managing Director and CEO, Simon Noon, stated:

“The quarter has seen the Company put in place significant building blocks to support the Sorby Hills Definitive Feasibility Study and development of the Project. The updated Mineral Resource Estimate and Metallurgical Testwork will underpin our Mine Plan and Process Plant design and I am confident the results will have a positive impact on the Project economics.”

Upgraded Mineral Resource Estimate for Sorby Hills

Boab's Pre-Feasibility Study ("PFS") confirmed the Sorby Hills Project as a low-risk, high value project underpinned by a large near-surface Pb-Ag-Zn deposit comprising a Mineral Resource of 44.1Mt at 3.3% Pb, 38g/t Ag and 0.5% Zn (ASX release 2 June 2020), and Proved and Probable Reserves of 13.6Mt at 3.6% Pb, and 40g/t Ag (ASX release 25 August 2020).

On the back of the positive PFS results, a Phase IV drilling program was designed to primarily advance the Project towards DFS status. As such, the bulk of drilling metres (3,340m, 70%) were apportioned to collecting samples for metallurgical and geotechnical testwork. The balance of the program was targeted at increasing geological confidence via infill drilling and testing potential shallow Resource extensions to the south of the Omega deposit (~1,460m, 30%).

An interim Mineral Resource update incorporating the results of the Phase IV drilling was released in April 2021 (ASX release 6 April 2021) and delivered 44.9Mt at 3.2% Pb, 0.5% Zn and 37g/t Ag.

Subsequently, a Phase V drilling program comprising an additional 59 diamond drill holes (5,284m) was completed with the objective of expanding the Sorby Hills Mining Inventory and supporting the opportunity to increase the 1.5Mtpa processing plant capacity proposed in the PFS.

The updated Mineral Resource Estimate (ASX release 17 December 2021) was undertaken by CSA Global and upgrades the PFS Mineral Resource Estimate via the inclusion of results from the Phase IV and Phase V drilling programs (Figure 1). A comprehensive breakdown of the Mineral Resource by Resource classification and deposit is shown in Table 1 and Table 2 below.

The Mineral Resource Estimate for Lead domains of the Sorby Hills deposit comprises 47.3Mt at 3.1% Pb, 0.4% Zn and 35g/t Ag (1% Pb cut-off).

The updated Mineral Resource Estimate has resulted in a 2.8 Mt (14%) increase in Measured and Indicated Tonnes of 2.8Mt (14%), 65kt contained Lead (9%) and 3.0Moz contained Silver (11%) versus the Mineral Resource Estimate that underpinned the PFS.

The increase in Resource quantity and confidence is expected to have a positive impact on the Sorby Hills Ore Reserve and DFS economics.

Metallurgical Testwork Program Delivers Enhanced Metal Recoveries

The DFS Metallurgical Testwork Program was launched on the back of a successful Phase IV drilling program with the primary objective of delivering robust results to underpin the Sorby Hills DFS Process Plant design criteria.

Approximately 1,420kg from 399m of half core was recovered from 35 HQ diamond holes drilled during the Phase IV and V programs and then combined and composited into Variability Samples, Schedule Composites and Master Composites.

Samples and Composites were utilised for a range of testwork including: Flotation, Comminution, Mineralogy, Heavy Liquid Separation ("HLS"), Tailings Thickening, Concentrate Filtration and Concentrate Analysis. The DFS Metallurgical Testwork Program builds upon a significant body of previous metallurgical testwork undertaken by Boab since acquiring the Sorby Hills Project in 2018 and testwork by others dating back to 1979.

Flotation Testwork

Metal recoveries adopted for economic modelling for the PFS comprised Lead: 94.9% (Fresh Ore) and 84% (Oxidised Ore) and Silver: 78.2% (Fresh Ore) and 94.4% (Oxidised Ore).

The DFS testwork program was designed to investigate and compare processing Oxidised Ore and Fresh Ore using both blended and separated ore processing strategies.

Table 3 below presents a summary of the Sorby Hills flotation performance estimates. The recoveries will be key inputs into the DFS mine design and Sorby Hills Reserve evaluation.

Flotation results confirm recoveries of:

- **78% to 95% (Fresh Ore) and 80% to 90% (Oxidised Ore) for Lead; and**
- **78% to 87% (Fresh Ore) and 88% to 92% (Oxidised Ore) for Silver.**

Recovery estimates are based on the Schedule Composite test results, and for the specific deposit estimates, the average Variability Sample test performance for that deposit. These results incorporate modifications based on Locked-Cycle testwork to account for closed circuit performance estimation and, in the case of separate Oxidised and Fresh Ore only recoveries, adjustments to account for operational inefficiencies associated with campaign style processing.

The separate flotation of Oxidised and Fresh Ore delivers an uplift in recovery over the Life of Mine versus the sequential treatment of an Oxidised / Fresh Ore Blend adopted in the Sorby Hills PFS and is anticipated to have a positive impact on Project economics.

Concentrate Analysis

A comprehensive assay was undertaken on Lead-Silver Concentrate produced from each locked cycle test. The results of these assays have been provided to potential offtakers as part of the ongoing tender for Boab's share of the Sorby Hills Lead-Silver concentrate production.

Table 3: Sorby Hills DFS Flotation Performance Estimates

Sample	Feed Grade		Con. Grade		Recovery	
	%Pb	g/t Ag	%Pb	g/t Ag	%Pb	%Ag

PFS Schedule Y3-4	3.50	25	59.9	372	83.1	72.5
PFS Schedule Y5+	4.12	36	60.7	504	92.6	89.2
Norton	4.98	86	62.6	1,076	76.6	75.8

HLS Testwork

The PFS identified DMS as an opportunity to enhance low grade ore prior to milling and flotation to allow processing of ore that otherwise would be deemed uneconomic. The DFS Metallurgical Testwork Program further explored this concept. Testwork result demonstrated a reduced recovery and highlighted additional process design and operation risk. Therefore, the DMS option is not recommended and will not be considered further within the DFS.

NAIF and Commercial Bank progress due diligence with Site Visit of Sorby Hills

Representatives from the Federal Government's Northern Australia Infrastructure Facility ("NAIF"), together with representatives from a number of Australian and international commercial mining banks, joined Boab management on a two-day site visit of the Sorby Hills Project and surrounding infrastructure including Kununurra township and Wyndham Port, as part of their ongoing due diligence of the Project.

The site visit followed positive discussions held with potential project lenders earlier in the year and provided attendees with a unique first-hand experience that will provide confidence in Boab's ability to execute the Project.

Financial and Corporate Overview

The consolidated cash balance of the Company as at 31 December 2021 was A\$8.4 million. During the period, the Company paid \$102k to related parties. These payments were made to Directors of Boab Metals Limited in relation to salaries and directors' fees, on normal commercial terms.

AGM Meeting

The Company held its Annual General Meeting on 26 November 2021 with all resolutions put to Shareholders approved on a poll.

Appointment of Sorby Hills General Manager

During the quarter, Mr Cameron Nobbs was appointed General Manager of the Sorby Hills Project.

Mr Nobbs brings to Boab over 25 years' experience in Mining and Civil industries. Most recently Mr Nobbs was the Manager of Tendering and Technical Services at Indus Mining where he was responsible for the submission of all mining and civil tenders. Prior to Indus Mining, Mr Nobbs held roles as a Senior Project Manager on a number of Mining and Civil project start-ups. Cameron has also held senior roles at NRW Mining & Civil, Georgiou, BGC Contracting and Macmahon overseeing project estimation, mine budgets, plant capital investment justification and the mentoring, training and leading of a team of on-site technical professionals.

Mr Nobbs takes on the primary responsibility for delivering the Sorby Hills DFS taking over from Mr David English who left the company during the quarter.

Mr Nobbs skillset and experience in the east Kimberley is aligned with the requirements of the Company at this point in time as Boab progress tenders for all major work packages for the Project.

Next Steps - Project Development Timeline

Over the upcoming quarter, the Company anticipates completing the following milestones:

- Complete the Offtake Tender for Boab's share of the Sorby Hills Lead-Silver Concentrate;
- Completing DFS Mine and Process Plant Design; and
- Undertaking tenders for the Process Plant and Infrastructure contracts.

Boab is targeting completion of the Sorby Hills DFS in Q2 2022 and reaching a Decision to Mine at in late Q2 / Q3 2022.

The Board of Directors have authorised this announcement for release to the market.

About Boab Metals Limited

Boab Metals Limited (“**Boab**”, ASX: **BML**) is a Western Australian based exploration and development company with interests in Australia and South America. In Australia, the Company is currently focused on developing the Sorby Hills Lead-Silver-Zinc Joint Venture Project in WA. Boab owns a 75% interest in the Joint Venture with the remaining 25% (contributing) interest held by Henan Yuguang Gold & Lead Co. Ltd.

Sorby Hills is located 50km from the regional centre of Kununurra in the East Kimberley and has existing sealed roads to transport concentrate from site to the facilities at Wyndham Port, a distance of 150km. Established infrastructure and existing permitting allows for fast-track production.

Compliance Statements

Information included in this announcement relating to Exploration Results has been extracted from the ASX Announcements titled “Sorby Hills DFS Metallurgical Testwork Results” dated 19 November 2021 and available to view at www.boabmetals.com.au. The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement. The Company confirms that the form and context in which the Competent Person’s findings are presented have not been materially modified from the original announcements.

Information included in this presentation relating to Mineral Resources has been extracted from the ASX Announcements titled “Expanded Resource to Underpin Sorby Hills DFS” dated 17 December 2021 and available to view at www.boabmetals.com.au. The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement. The Company confirms that the form and context in which the Competent Person’s findings are presented have not been materially modified from the original announcements.

Urrao Project 2791	Colombia	100%	100%

Appendix 2 – Metal Equivalent Calculation Method

The contained metal equivalence formula is based on the Sorby Hills PFS including:

- Lead Price US\$2,095/t;
- Lead recovery of 93.3% (weighted average of oxide and fresh Pb recoveries);
- Lead Payability rate of 95%;
- Silver Price US\$21.1/oz;
- Silver recovery of 80.3% (weighted average of oxide and fresh Ag recoveries); and
- Silver Payability rate of 95%.

It is Boab's opinion that all elements included in the metal equivalent calculation have a reasonable potential to be recovered and sold. The formula used to calculate lead equivalent grade is:

$$\text{MetalEq (\%)} = G_{pri} + (G_{pri} \times [\sum_i R_i S_i V_i G_i] / (R_{pri} S_{pri} V_{pri} G_{pri}))$$

where R is the respective metallurgical metal recovery rate, S is the respective smelter return rate, V is metal price/tonne or ounce, and G is the metal commodity grade for the suite of potentially recoverable commodities (i) relative to the primary metal (pri).

Metal equivalents are highly dependent on the metal prices used to derive the formula. Boab notes that the metal equivalence method used above is a simplified approach. The metal prices are based on the PFS values adopted and do not reflect the metal prices that a smelter would pay for concentrate nor are any smelter penalties or charges included in the calculation.

Owing to limited metallurgical data, zinc grades are not included at this stage in the lead equivalent grade calculation.

APPENDIX 5B

Mining Exploration Entity or Oil and Gas Exploration Entity Quarterly Cash Flow Report

Authorised for release by the Board of Directors of Boab Metals Limited

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – e.g. Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
