### TEN NEW HIGH PRIORITY TARGETS AND THICK INTERSECTIONS AT LADY JULIE

- Ten large new targets have been located mainly to the northeast and south of Lady Julie Central, after using the results of a recently completed structural study in combination with reprocessed historical aeromagnetics and ground gravity images, geochemical, geological mapping and drilling data (Figure 1). The best targets interpreted are where NNW and NE-trending structures intersect known and interpreted porphyry intrusions sometimes associated with mafic rocks. Existing drill testing has mostly been testing the western part of the Lady Julie 6.5km x 1.5km strip, where there is minimal soil cover and only represents less than 20% of this prospective zone. AC drilling within these high priority ten targets is anticipated to start within the next two weeks and is within 80% of the prospective Lady Julie strip, which is under cover (Figure 1).
- Ongoing extension drilling at Lady Julie Central has shown thick intersections some of which start from near surface with 30m at 2.65g/t from 6m in MLJRC453, 36m at 1.0g/t from 0m in MLJRC475, and a thick intersection of 52m at 1.1 g/t in MLJRC448, 2m at 12.8g/t from 29m in MLJRC456 and many further examples of thick high-grade intersections are shown in the highlights below and in Figure 2.
- There are now four main mineralised centres that have been extensively drilled and in some cases, further drilling is planned. They include Lady Julie Central and Lady Julie WMC (being drill tested over a 1km length), Lady Julie 4 (being tested over 500m length), HN9 (2.5km length) and Homeward Bound South (being tested over a 1km length and is within the 5km mineralised Federation shear zone, with results pending for a 24 RC hole 1820m RC drilling programme). These four mineralised areas are all shallow deposits and, in some cases, starting from surface providing low strip ratios and potential for economic ore that is open-cuttable.

**Figure 1 Gold intersection overview covering the HN5, HN6, HN9 and adjacent Lady Julie Projects showing ten additional gold targets (green outlines) with highlighted intersections (white label). Significant historical and Magnetic intercepts (maximum Au projected to surface) and planned RC holes in yellow.**

- The Lady Julie Central and Lady Julie WMC mineralisation (Figures 1 and 2) can be unusually thick with associated higher grades, 41m at 2.6g/t from 31m in MLJRC162, 36m at 2.3g/t from 68m in MLJRC352, 52m at 1.5g/t from 15m in MLJRC342 and 52m at 1.1g/t from 68m in MLJRC448, which augers well for the potential economics considering a lot of these intersections also start from surface, 25m at 4.4g/t from 0m in MLJRC348, 22m at 4.1g/t from 0m in MLJRC457, 40m at 1.7g/t from 0m in MLJRC482 and 39m at 1.6g/t from 7m in MLJRC295. The highest-grade and thickest zones trend NNW within an overall NS trend (Figure 1). This 1km long target zone is being infill drilled to get it to an Indicated Category. There are at least two separate stacked lodes present in this current drilling area. Assays are pending for 34 RC holes totaling 3349m and 3 diamond holes for 302m at Lady Julie Central and Lady Julie WMC and Lady Julie 4 and six RC holes totaling 452m at HN9.
- Studies by a consulting structural geologist have been carried out at the HN9 and Lady Julie deposits, involving reviews of oriented drill core, RC logs and historical geological mapping. Data was compiled to form 3-D models of the geology and gold mineralisation at HN9 and over the Lady Julie Central and Lady Julie WMC. Conclusions are that the mineralisation is controlled by the interplay between NNW-trending shear zones and felsic to dacitic porphyry intrusions of various orientations. Both the shear zones and porphyries dip gently to moderately in an easterly direction.
- At HN9 the porphyries trend from N-S to NNW within a mafic package of dolerites and basalts with mineralisation occurring both within the porphyries and on sheared porphyry contacts. The low angle of intersection between shearing and the porphyry bodies at HN9 has resulted in a shallow generally NNE-trending plunge direction to the mineralisation.
- The structural setting in the Lady Julie strip is more diverse, at the southern end of the trend mineralisation (Lady Julie WMC) is mainly contained within a set of N-S trending porphyry bodies hosted within an ultramafic sequence where an interpreted NNW-trending shear zone cuts the porphyries, resulting in a shallow N to NNE plunge to the mineralisation. Further north, at Lady Julie Central, where porphyries intrude mafic-ultramafic stratigraphy, the intersection between a NNW-trending, moderately ENE-dipping shear zone and more variably oriented porphyries has resulted in moderately SE-plunging mineralisation in both porphyry and the mafic-ultramafic sequence. Here, the porphyries range from N-S to NE in strike, possibly influenced by a NE-trending structure.
- Using the results of the structural study, together with historical aeromagnetics and gravity images, geochemical, drilling and geological mapping data, ten high priority targets have been identified for aircore drilling. Particular attention is being paid to areas where NNW and NE-trending structures intersect known and interpreted porphyry intrusions mainly in the Lady Julie strip, in areas that have not been explored due to the thicker soil cover which obscure potential mineralisation within the Lady Julie NS trending 6.5km x 1.5km strip. More than 80% of this strip is under cover and remains very prospective. Drilling is anticipated to start within the next two weeks.
- The gold mineralisation at Lady Julie Central can occur within the porphyry or along the porphyry/mafic unit contacts. Locally there is a strong concentration within the mafic units as well, where there is higher grade mineralisation. Also, the alteration is usually a strong

pervasive albite-silicic alteration within the porphyry units which have numerous cross-cutting quartz vein intersections as well.

- **Thickened porphyry zones (up to 70m) occur on the eastern part of the Lady Julie Central and at Lady Julie WMC strongly mineralised zones, on the edge of a major 6km long NS thrust zone. These porphyries are also steeper dipping in this area and may represent conduits for deeper mineralisation to come closer to the surface. These underlying intrusions are also targets for deeper mineralisation like the deeper intrusions at depth at the world class Sunrise Dam gold mine and deeper holes are planned here.**

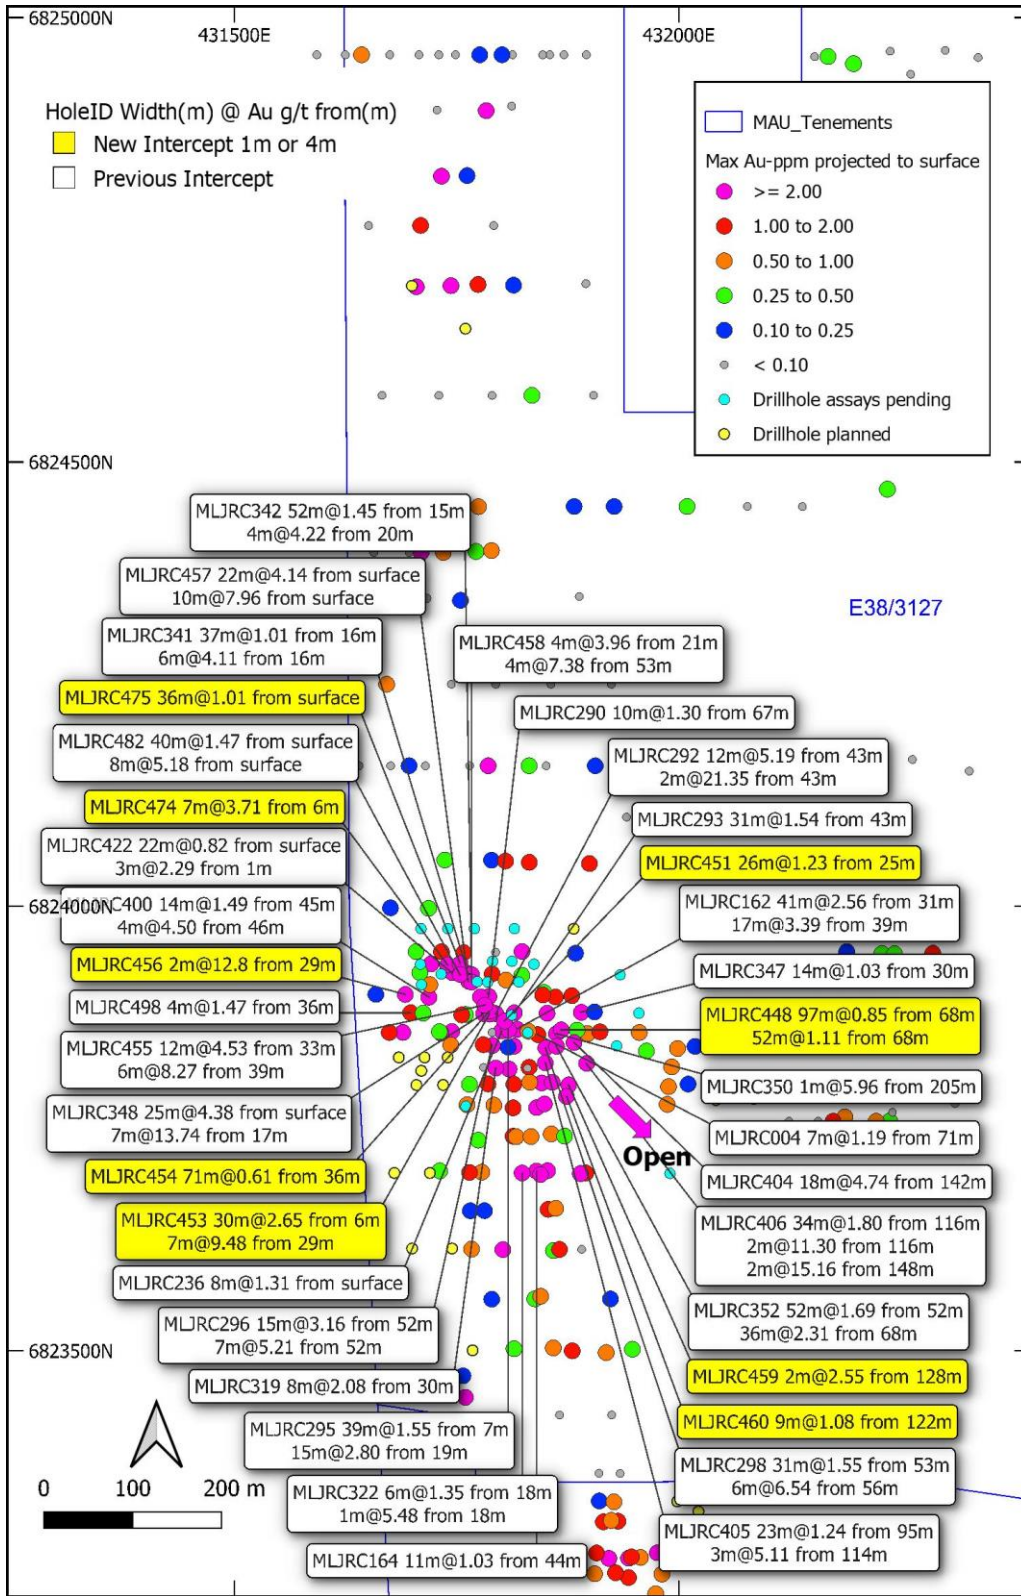

Figure 2. The southern 1km part of the Lady Julie North1 area highlighting significant thick intersections from the latest drill programme (yellow large rectangular label) and previous drilling (white label) with maximum gold projected to surface and planned drillholes (in yellow).

**Within the HN5, HN6, HN9 and Lady Julie areas there are many new shallow intersections (Fig 1 and Table 2) with a total of 1,727 intersections (ranging from 1 to 30m) greater than 0.5g/t Au, which includes 755 greater than 1g/t Au, 284 greater than 2g/t Au, 156 greater than 3g/t Au and 97 greater than 4g/t Au.**

Both the mineralised targets at HN9 and Lady Julie appear to straddle two deep seated thrusts, with HN9 being a major 3km-long mineralised zone. The eight thrust zones that come to surface continue to the north and south over an extensive 6km length and shallow RAB and or soil geochemistry is being carried out to help outline any further anomalous gold areas worthy of follow up drilling (Figure 1). At Lady Julie North 1 and 2, the targets are compelling because they are associated with the two parallel Thrusts 7 and 8 (Fig. 1).

At Hawks Nest 5, 6, 9 and Lady Julie extensive drilling programmes have been completed. (Tables 3 and 4), including 1,637 RC holes totaling 114,779m (average 70m depth) 28,396 2–5m composites and 17,497 1m splits and 7 Diamond holes totaling 751m. This release is mainly reporting on 872 composite assays (2-4m) and 843 1m splits from 63 RC holes (MLJRC434-4367, 441,444-451, 453,454,456,459-461,463,464,473-476,488,495-501,503-513,515,516 and 519-535) totaling 4,323m. Assays are pending for 34 RC holes for 3.349m and 3 Diamond holes for 302m at Lady Julie and 6 RC holes for 452m at HN9.

**An RC rig has already started with a programme of 86 RC holes for 7916m and is subdivided into 19 RC holes for 1928m at Lady Julie Central, 8 RC holes for 836m at Lady Julie WMC, 14 RC holes for 1958m at Lady Julie 4, 2 RC holes for 160m at Lady Julie 2 and 43 RC holes for 3034 m at Lady Julie (shown in yellow in Figure 1 and Table 4) following up previous promising results with the aim of ultimately converting to an Indicated Resource. In addition, 24 RC holes for 1820m have been completed at Homeward Bound South over a 1km strike length following up promising thick intersections of 20m at 3g/t from 60m in MHBSRC025 and 31m at 1g/t from 20m in MHBSRC010 and results are pending.**

\* New 1m or 4m assay

The multiple shallow dipping extensive thickened lodes at HN9 are a potential indicator for deeper mineralisation because all the numerous nearby large deposits in the region including Wallaby (7Moz), Sunrise Dam (16Moz) and Jupiter (1.3Moz) have persistent internal shallow-dipping mineralised lodes that are often called shear zones or thrust zones, which are ubiquitous throughout these deposits and have been defined down to 1500m depth at the Wallaby deposit. In addition, many discoveries in recent times have been made by drilling below 100m because the historical drilling was far too shallow. At HN5, 6, 9 and Lady Julie the average hole depth is only 70m providing tremendous scope for upside potential. In addition, the length of our 2.5km mineralised shear zone at HN9 is like the length of the large Jupiter, Wallaby and Sunrise Dam Deposits.

Managing Director George Sakalidis commented: "With the Australian gold price at record levels of \$2620, the HN9 Project area encompassing HN5, HN6, HN9 and Lady Julie being only 15km NW of the Granny Smith Operations owned by Gold Fields Australia Pty Ltd and only 10km NE of the Jupiter Operations owned by Dacian Gold Ltd and 35km north of the Sunrise Dam deposit owned by AngloGold Ashanti Ltd at Laverton, WA. (Figure 3), is shaping up and has potential for large-scale shallow deposits.

The multiple, shallow intersections that start from surface are exciting at Lady Julie Central with intersections of 24m at 4.4g/t from 0m in MLJRC348, 22m at 4.1g/t from 0m in MLJRC457 and 8m at 5.18g/t from 0m in MLJRC482, (Figure 1). These shallow zones continue downdip and thicken as shown in with an intersection of 52m at 1.1g/t from 68m in MLJRC448 and 18m at 4.7g/t from 142m in MLJRC404. There are thick intersections at Lady Julie WMC and Lady Julie 4 and Homeward Bound South which are also being followed up with drilling.

Ten large new targets have been located mainly to the northeast and south of Lady Julie Central, after using the results of a recently completed structural study in combination with reprocessed historical aeromagnetics and ground gravity images, geochemical, geological mapping and drilling data. The best targets that contain the mineralisation at HN9 and Lady Julie are where NNW and NE-trending structures intersect known and interpreted porphyry intrusions sometimes associated with mafic rocks. Existing drill testing has only been testing the western part of the Lady Julie strip where there is minimal soil cover and only represents less 20% of the 6.5km x 1.5km prospective zone. This study opens up over 80% of the prospective land at Lady Julie and an AC drilling programme within these high priority 10 targets is anticipated to start within the next two weeks (Figure 2).

This is an exciting time for the company having four main deposits with significant shallow gold near surface which are all potentially open-cuttable with recently engaged global investment bank Jefferies, who are helping ongoing review opportunities to maximise shareholder value.”

The information in this report is based on information compiled by George Sakalidis BSc (Hons), who is a member of the Australasian Institute of Mining and Metallurgy. George Sakalidis is a Director of Magnetic Resources NL. George Sakalidis has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. George Sakalidis consents to the inclusion of this information in the form and context in which it appears in this report.

The Information in this report that relates to:

1. Promising 200m wide 0.7g/t soil geochemistry associated with extensive 1km long NS porphyries at newly named Hawks Nest 9. MAU ASX Release 15 October 2018
2. 1.1km NNW Mineralised Gold Intersections at HN9. MAU ASX Release 7 November 2018
3. Surface drilled Mineralisation extends to significant 1.5km at HN9. MAU Release 20 November 2018
4. Hawks Nest Delivers with 8m@4.2g/t Gold from 4m MAU Release 29 January 2018
5. Robust Near Surface High-grade Zone of 7m @ 4.5g/t Gold from 5m from 1m splits. MAU Release 5 March 2018
6. Hawks Nest Geochemical Survey Outlines Potential Extensions to the Prospective 7m @ 4.5g/t Gold Intersected. MAU Release 20 March 2018
7. An 865m RC drilling programme started testing promising 7m at 4.5g/t gold and eight separate anomalous soil geochemical targets at HN5. MAU Release 10 May 2018
8. Large Gold Mineralised Shear Zone Greater Than 250m at Hawks Nest 5. MAU Release 9 June 2018
9. Gold Geochemical Target Zone Grows to Significant 2km in Length at HN9. MAU Release 7 January 2019
10. Significant 2km Gold Target is open to the East on 83% of the 24 Lines Drilled at HN9. MAU Release 4 February 2019
11. Significant 2.1km Gold Target Still open to North, South, East and at Depth. MAU Release 25 March 2019
12. Gold Target Enlarged By 47% to Significant 3.1km and is still open to the North, East and at Depth. MAU Release 22 May 2019
13. HN9 Prospective Zone Enlarged by 170% with Lady Julie Tenements. MAU Release 24 June 2019
14. 200m-Wide Gold Zone Open to The Northeast and Very Extensive Surface Gold Mineralisation Confirmed at HN9 Laverton. MAU Release 27 June 2019
15. 200m Wide Gold Zone Open to the North and New 800m Anomalous Gold Zone defined at HN9 Laverton. MAU Release 4 September 2019
16. Highest Grades Outlined at HN9 and are being Followed Up and Lady Julie Shallow Drilling Commencing Shortly. MAU Release 14 October 2019
17. Central Part of HN9 Shows Significant Thickening of The Mineralised Zone to 28m. MAU Release 28 November 2019
18. Multiple Silicified Porphyry Horizons from Deep Drilling and 57m Mineralised Feeder Zone at MAU Release 17 January 2020
19. Very High-Grade Intersection of 4m at 49g/t Adjacent to 70m Thick Mineralised Feeder Zone MAU Release 5 February 2020
20. 20 km of thickened porphyry units outlined by ground magnetic interpretation at Hawks Nest 9. MAU Release 9 March 2020
21. Further Thick Down Plunge Extensions and NW Extension Shown up at HN9. MAU Release 18 May 2020
22. Four Stacked Thickened Porphyry Lodes at HN9. MAU Release 3 August 2020
23. High-Grade Intersections in Thickened Zone at HN9. MAU Release 18 September 2020
24. Follow up of 16m at 1.16g/t gold from 64m at Lady Julie MAU Release 2 November 2020
25. Shallow Seismic searching for multiple thickened lodes MAU Release 16 November 2020
26. New thicken zone in southern part of Hawks Nest 9. MAU Release 1 December 2020
27. Two RC rigs now operating at HN9 and Lady Julie. MAU Release 11 January 2021
28. Nine gold targets defined over 14km at HN5, HN6, HN9 and Lady Julie. MAU Release 3 June 2021
29. Lady Julie delivers with 38m at 3.6g/t gold from 32m. MAU Release 23 June 2021
30. Lady Julie North expanded with purchase of tenements. MAU Release 8 June 2021
31. Multiple thick and high-grade zones located at Lady Julie. MAU Release 16 August 2021
32. Multiple thick high-grade intersections from surface at Lady Julie. MAU Release 14 September 2021
33. Thick high-grade intersections are open to the southeast at Lady Julie. MAU Release 22 October 2021
34. High-grade intersections and vertical shoots at Lady Julie. MAU Release 10 January 2022
35. Thicker intersections continue to grow Lady Julie1 and 4 and Homeward Bound 21 February 2022

All of which are available on [www.magres.com.au](http://www.magres.com.au)

This announcement contains forward-looking statements which involve a number of risks and uncertainties. These forward-looking statements are expressed in good faith and believed to have a reasonable basis. These statements reflect current expectations, intentions or strategies regarding the future and assumptions based on currently available information. Should one or more of the risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary from the expectations, intentions and strategies described in this announcement. No obligation is assumed to update forward looking statements if these beliefs, opinions and estimates should change or to reflect other future developments.

## JORC Code, 2012 Edition – Table 1 report

### Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
Sampling techniques	<ul style="list-style-type: none"> <li>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</li> <li>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</li> <li>Aspects of the determination of mineralisation that are Material to the Public Report.</li> <li>In cases where ‘industry standard’ work has been done this would be relatively simple (eg ‘reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay’). In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</li> </ul>	<ul style="list-style-type: none"> <li>For RAB sampling, 1m completed by Duketon (A22722)</li> <li>For RAB sampling, 4m composites completed by Gwalia (A29728)</li> <li>For AC sampling, 4m composites and 1m splits completed by Metex (A62445, A72419)</li> <li>For RC sampling, 2m composites completed by Julia Mines (A18060) and 5m composites completed by Placer (A34935)</li> <li>All the reported historical drilling and their relevant sampling procedures, QAQC and analytical methods etc. are referred to in the original WAMEX reports (references in the main text of ASX release of 7 November 2018).</li> <li>The targets at HN9 have been tested by RC drilling. A 1 metre split is taken directly from a cone splitter mounted beneath the rig’s cyclone. The cyclone and splitter are cleaned regularly to minimize contamination.</li> <li>Sampling and QAQC procedures are carried out using Magnetic’s protocols as per industry sound practice.</li> <li>RC drilling was used to obtain bulk 1 metre samples from which composite 4m samples were prepared by spear sampling of the bulk 1m samples. 3kg of the composite sample was pulverized to produce a 50g charge for fire assay for gold. The assay results of the composite samples are used to determine which 1m samples from the rig’s cyclone and splitter are selected for fire assay using the same method.</li> </ul>
Drilling techniques	<ul style="list-style-type: none"> <li>Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</li> </ul>	<ul style="list-style-type: none"> <li>Rotary air blast (RAB) drilling with a blade bit.</li> <li>Reverse Circulation (RC) drilling was carried out using a face sampling hammer with a nominal diameter of 140mm.</li> <li>Aircore (AC) drilling.</li> </ul>
Drill sample recovery	<ul style="list-style-type: none"> <li>Method of recording and assessing core and chip sample recoveries and results assessed.</li> <li>Measures taken to maximise sample</li> </ul>	<ul style="list-style-type: none"> <li>RC sample recoveries are visually estimated qualitatively on a metre basis.</li> <li>Various drilling additive (including muds and foams)</li> </ul>

Criteria	JORC Code explanation	Commentary
	<p><i>recovery and ensure representative nature of the samples.</i></p> <ul style="list-style-type: none"><li>• <i>Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</i></li></ul>	<p>have been used to condition the RC holes to maximize recoveries and sample quality.</p> <ul style="list-style-type: none"><li>• Insufficient drilling and geochemical data is available at the present stage to evaluate potential sample bias. Drill samples are sometimes wet which may result in sample bias because of preferential loss/gain of fine/coarse material.</li></ul>
Logging	<ul style="list-style-type: none"><li>• <i>Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</i></li><li>• <i>Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.</i></li><li>• <i>The total length and percentage of the relevant intersections logged.</i></li></ul>	<ul style="list-style-type: none"><li>• Lithology, alteration and veining is recorded and imported into the Magnetic Resources central database. The logging is of sufficient standard to support a geological resource.</li><li>• All drill holes were logged in full.</li></ul>
Sub-sampling techniques and sample preparation	<ul style="list-style-type: none"><li>• <i>If core, whether cut or sawn and whether quarter, half or all core taken.</i></li><li>• <i>If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</i></li><li>• <i>For all sample types, the nature, quality and appropriateness of the sample preparation technique.</i></li><li>• <i>Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</i></li><li>• <i>Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half sampling.</i></li><li>• <i>Whether sample sizes are appropriate to the grain size of the material being sampled.</i></li></ul>	<ul style="list-style-type: none"><li>• RC samples are cyclone split to produce a 2-3kg sample. 4m composite samples are prepared by tube sampling bulk 1m samples.</li><li>• No field duplicates were taken.</li><li>• Sample sizes are appropriate for the grain size being sampled.</li></ul>
Quality of assay data and laboratory tests	<ul style="list-style-type: none"><li>• <i>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</i></li><li>• <i>For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</i></li><li>• <i>Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and</i></li></ul>	<ul style="list-style-type: none"><li>• RC samples are assayed using a 50g charge and a fire assay method with an AAS finish which is regarded as appropriate. The technique provides an estimate of the total gold content.</li><li>• Industry standard standards and duplicates are used by the NATA registered laboratory conducting the analyses</li></ul>

Criteria	JORC Code explanation	Commentary
	<i>precision have been established.</i>	
<i>Verification of sampling and assaying</i>	<ul style="list-style-type: none"><li>• <i>The verification of significant intersections by either independent or alternative company personnel.</i></li><li>• <i>The use of twinned holes.</i></li><li>• <i>Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</i></li><li>• <i>Discuss any adjustment to assay data.</i></li></ul>	<ul style="list-style-type: none"><li>• No independent verification of drill intersections has yet been carried out.</li><li>• Twin holes are planned to be drilled.</li><li>• Primary data is entered into an in-house database and checked by the database manager.</li><li>• No adjustment of assay data other than averaging of repeat and duplicate assays</li><li>• No verification of historically reported drilling has been carried out</li></ul>
<i>Location of data points</i>	<ul style="list-style-type: none"><li>• <i>Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</i></li><li>• <i>Specification of the grid system used.</i></li><li>• <i>Quality and adequacy of topographic control.</i></li></ul>	<ul style="list-style-type: none"><li>• Drill collars located by hand- held GPS with an accuracy of +/- 5m.</li><li>• Grid system: MGAz51 GDA94.</li><li>• Topographic control using regional DEM data.</li></ul>
<i>Data spacing and distribution</i>	<ul style="list-style-type: none"><li>• <i>Data spacing for reporting of Exploration Results.</i></li><li>• <i>Whether the data spacing, and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</i></li><li>• <i>Whether sample compositing has been applied.</i></li></ul>	<ul style="list-style-type: none"><li>• RC drilling was carried out at HN9 prospect. 1m samples were composited into 4m composite samples for assay.</li><li>• RC drilling was carried out and 1m samples were composited into 2m and 5m composite samples for assay</li></ul>
<i>Orientation of data in relation to geological structure</i>	<ul style="list-style-type: none"><li>• <i>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</i></li><li>• <i>If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.</i></li></ul>	<ul style="list-style-type: none"><li>• At HN9 historical geological mapping and the trends of old gold diggings indicate a general NNW to SSE trend to the geological structures. The historical drilling was carried out orthogonal to this trend.</li></ul>
<i>Sample security</i>	<ul style="list-style-type: none"><li>• <i>The measures taken to ensure sample security.</i></li></ul>	<ul style="list-style-type: none"><li>• Samples were stored in the field prior to dispatch to Perth using a commercial freight company.</li></ul>
<i>Audits or reviews</i>	<ul style="list-style-type: none"><li>• <i>The results of any audits or reviews of sampling techniques and data.</i></li></ul>	<ul style="list-style-type: none"><li>• No audits or reviews of the sampling techniques and data from historical drilling have been carried out.</li></ul>

## Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
<i>Mineral tenement and land tenure status</i>	<ul style="list-style-type: none"> <li>Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</li> <li>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</li> </ul>	<ul style="list-style-type: none"> <li>The HN9 target area is situated on exploration Licence E38/3127, M38/1041 and P38/4126 held 100% by Magnetic Resources NL.</li> <li>The adjacent Lady Julie targets are on Prospecting Licences P38/4346, P38/4379, P38/4384 and P38/4170 held 100% by Magnetic Resources NL.</li> <li>All the above are granted tenements with no known impediments to obtaining a licence to operate.</li> </ul>
<i>Exploration done by other parties</i>	<ul style="list-style-type: none"> <li>Acknowledgment and appraisal of exploration by other parties.</li> </ul>	<ul style="list-style-type: none"> <li>The HN9 area has been subject to historical exploration refer to text</li> </ul>
<i>Geology</i>	<ul style="list-style-type: none"> <li>Deposit type, geological setting and style of mineralisation.</li> </ul>	<ul style="list-style-type: none"> <li>HN9 Two mineralization styles have been observed: quartz veining and stock working in the porphyries and shear-hosted quartz veins on porphyry-amphibolite contacts.</li> </ul>
<i>Drill hole Information</i>	<ul style="list-style-type: none"> <li>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes: <ul style="list-style-type: none"> <li>easting and northing of the drill hole collar</li> <li>elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</li> <li>dip and azimuth of the hole</li> <li>down hole length and interception depth</li> <li>hole length.</li> </ul> </li> <li>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</li> </ul>	<ul style="list-style-type: none"> <li>Refer to table in the text of this release.</li> </ul>
<i>Data aggregation methods</i>	<ul style="list-style-type: none"> <li>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</li> <li>Where aggregate intercepts incorporate short</li> </ul>	<ul style="list-style-type: none"> <li>No weighting or cutting of gold values, other than averaging of duplicate and repeat analyses.</li> </ul>

Criteria	JORC Code explanation	Commentary
	<p><i>lengths of high-grade results and longer lengths of low- grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</i></p> <ul style="list-style-type: none"><li>• <i>The assumptions used for any reporting of metal equivalent values should be clearly stated.</i></li></ul>	
<i>Relationship between mineralisation widths and intercept lengths</i>	<ul style="list-style-type: none"><li>• <i>These relationships are particularly important in the reporting of Exploration Results.</i></li><li>• <i>If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</i></li><li>• <i>If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').</i></li></ul>	<ul style="list-style-type: none"><li>• The relationships between mineralization widths and intercept lengths at HN9 and Lady Julie1 and 4 remain to be clarified.</li></ul>
<i>Diagrams</i>	<ul style="list-style-type: none"><li>• <i>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</i></li></ul>	<ul style="list-style-type: none"><li>• Refer to text.</li></ul>
<i>Balanced reporting</i>	<ul style="list-style-type: none"><li>• <i>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced avoiding misleading reporting of Exploration Results.</i></li></ul>	<ul style="list-style-type: none"><li>• Plus 1g/t Au intersections from the RC drilling have been reported in this release.</li></ul>
<i>Other substantive exploration data</i>	<ul style="list-style-type: none"><li>• <i>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</i></li></ul>	<ul style="list-style-type: none"><li>• Metallurgical results refer to ASX Release 27/10/2020 Positive metallurgical results from Hawks Nest 9.</li></ul>
<i>Further work</i>	<ul style="list-style-type: none"><li>• <i>The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).</i></li><li>• <i>Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</i></li></ul>	<ul style="list-style-type: none"><li>• Table 4 shows the drilling planned. Further deeper drilling will be planned to follow up results from recent intersections with 86 RC holes totaling 7,916m within the Lady Julie strip.</li><li>• As outlined in this release.</li><li>• A map and table of the proposed RC drilling is shown in this release.</li></ul>
