CENTRAL SANDSTONE AUGER PROGRAMME COMPLETE

AUGER PROGRAMME TARGETTING 5 KNOWN AREAS OF ANOMALISM AND TESTING 29 ADDITIONAL AREAS OF INTEREST

Aurumin Limited (ASX: AUN) ("Aurumin" or "the Company") is pleased to announce the first stage of auger drilling at its 100% owned **Central Sandstone Gold Project** has been completed.

A vehicle-mounted auger drill was used to further test and infill 5 targets generated through auger work completed in 2021. A further 29 areas of interest identified by Aurumin geologists were targeted with first pass wide spaced auger drilling. A total of 467 holes were drilled, aiming to geochemically sample the cover-bedrock interface.

The original scope and coverage of the programme was adjusted in response to hard ground and the inability to efficiently test areas of greater depth of transported cover with the auger rig. Sampling was completed at 29 of the initial 36 areas of interest. Alternative sampling strategies are being planned for the areas deferred in this programme.

All samples have been dispatched to the laboratory and the company expects results to be returned in 2-3 weeks.

Competent Person Statement

The information in this announcement that relates to exploration results, data quality, geological interpretations for the Central Sandstone Project is based on information compiled by Peter Aldridge, a Competent Person who is a Member of the Australian Institute of Geoscientists and a full-time employee of Aurumin Limited. Mr Aldridge has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Aldridge consents to the inclusion in this announcement of the matters based on this information in the form and context in which it appears.
