Helium concentrations over 17 times background detected above primary target in Jesse#1A

Grand Gulf Energy Ltd (ASX:GGE) (“Grand Gulf” or the “Company”) is pleased to provide a drilling update for Jesse1#A, its potentially company-making maiden pure-play helium well in the Red Helium Project.

Continuous mud gas monitoring using quadrupole mass spectroscopy detected several zones with elevated helium concentrations of up to seventeen times background levels (124 ppm helium).

The detected helium concentrations are above the primary Leadville formation target and, whilst not yet at target depth, are indicative of a working helium system, and considered a positive and significant signal for deeper helium potential.

Six historic wells exclusively targeting hydrocarbons were drilled within the project area, proving trap, seal, reservoir presence, gas charge and the presence of helium. Several wells tested non-flammable gas in the Leadville Formation, with the only two of the wells analysed for helium confirming helium presence.

The Jesse1#A well is on schedule with the intermediate section drilled to a depth of 5,875 feet, before changing out the mud system to drill through the 1,700 feet of anhydrite (salt seal) formations. The well is currently drilling ahead to a depth of approximately 8,100 feet, before running 7 inch casing and drilling to test the primary Leadville Formation helium target at an anticipated depth of 8,300 feet. The mud gas compositions will be continually monitored whilst drilling progresses.

This ASX announcement has been authorised for release by the Board of Grand Gulf Energy Ltd.

About the Red Helium Project and Jesse#1A:

The Red Helium Project has a P50 gross prospective helium resource of 10.9bcf¹, with the Jesse#1A well targeting one of four mature independent prospects within the Red Helium Project, with additional running room and deeper unexplored potential identified².

The Jesse#1A well is located immediately adjacent to unutilised pipeline connected to the Lisbon helium processing plant (Lisbon), operated by Paradox Resources LLC (Paradox)³. Grand Gulf executed a Helium Offtake Agreement (Oftake) with Paradox in March 2022, providing a pathway to monetisation of a successful Jesse#1A with minimal time / CapEx.

Recoverable helium (bcf)	P90 (1U)	P50 (2U)	P10 (3U)
Gross to Valence (28,046 gross acres)	7.6	10.9	12.9
Net to Valence (18,959 net acres)	5.2	7.4	8.5
Net to GGE (earning 85% of Valence)	4.4	6.3	7.2
Red Project Total	7.9	20.8	57.6

Table 1 – September 2021 Maiden Helium Prospective resource

The estimated quantities of helium that may potentially be recovered by the application of a future development project relate to undiscovered accumulations. These estimates have both an associated risk of discovery and a risk of development. Further exploration appraisal is required to determine the existence of a significant quantity of potentially moveable helium.

About Grand Gulf Energy:

Grand Gulf Energy Ltd (ASX:GGE) is an independent exploration and production company, headquartered in Australia, with operations and exploration in North America. The Red Helium project represents a strategic pivot to a pure-play helium exploration project, located in Paradox Basin, Utah, in the prolific Four Corners region. Competent Person's Statement:

The information in this report is based on information compiled or reviewed by Mr Keith Martens, Technical Director of Grand Gulf. Mr Martens is a qualified oil and gas geologist/geophysicist with over 45 years of Australian, North American, and other international executive oil and gas experience in both onshore and offshore environments. He has extensive experience of oil and gas exploration, appraisal, strategy development and reserve/resource estimation. Mr Martens has a BSc. (Dual Major) in geology and geophysics from The University of British Columbia, Vancouver, Canada.

Forward Looking Statements:

This release may contain forward-looking statements. These statements relate to the Company's expectations, beliefs, intentions or strategies regarding the future. These statements can be identified by the use of words like "anticipate", "believe", "intend", "estimate", "expect", "may", "plan", "project", "will", "should", "seek" and similar words or expressions containing same. These forward-looking statements reflect the Company's views and assumptions with respect to future events as of the date of this release and are subject to a variety of unpredictable risks, uncertainties, and other unknowns. Actual and future results and trends could differ materially from those set forth in such statements due to various factors, many of which are beyond our ability to control or predict. These include, but are not limited to, risks or uncertainties associated with the discovery and development of oil, natural gas and helium reserves, cash flows and liquidity, business and financial strategy, budget, projections and operating results, oil and natural gas prices, amount, nature and timing of capital expenditures, including future development costs, availability and terms of capital and general economic and business conditions. Given these uncertainties, no one should place undue reliance on any forward-looking statements attributable to GGE, or any of its affiliates or persons acting on its behalf. Although every effort has been made to ensure this release sets forth a fair and accurate view, we do not undertake any obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise
