# NAME CHANGED TO GTI ENERGY LTD — TICKER UNCHANGED

GTI Energy Ltd (GTI or Company, ASX:GTR & OTCQB:GTRIF) advises that the Company has changed its name following the approval received from GTI shareholders at the Company's AGM today.

## Highlights:

- New name reflects GTI's focus on defining & developing economic ISR uranium resources to supply the world's largest fleet of nuclear power plants in the US
- GTI is positioned for the US uranium mining industry's renaissance and is part of Wyoming's next wave of ISR uranium developers
- New URL: https://www.gtienergy.com.au/

# **Green Mountain Acquisition Transaction Update**

GTI recently announced, on April 6th, 2022, an Acquisition agreement to acquire Logray, the holder of 13,800 acres of claims at Green Mountain in Wyoming abutting Rio Tinto's claims and adjacent to GTI's existing GDB projects. The Company expects settlement of the Acquisition to occur during early June 2022.

The Green Mountain Project Acquisition will bring GTI's total GDB land holding to ~35,000 acres, an increase of 40%, with the new project containing a number of uranium mineralised roll fronts hosted in the Battle Springs formation located close to several major deposits. Historical Kerr McGee drill data, which has been a reliable guide to exploration at GTI's Thor Project, and oil-well exploration drill logs both confirm the presence of uranium mineralised roll fronts and the prospective Battle Springs formation which hosts neighbouring major uranium deposits.

The Project is located in the neighbourhood of Energy Fuel's (EFR) 30Mlb Sheep Mountain deposit, Ur-Energy's (URE) Lost Soldier ISR deposit<sup>1</sup>, UEC's (UEC) Antelope deposit & Rio Tinto's (RIO) Big Eagle (past producing), Jackpot, Desert View, Phase II, & Willow Creek deposits. The Claims lie south of Green Mountain, ~5kms from GTI's existing Odin claim group & within 15km of GTI's Thor project where a successful maiden drill program was completed during May 2022.

# 100,000 ft July Exploration Program Overview – Great Divide Basin (**GDB**)

GTI is targeting development of economically viable ISR amenable uranium resources at its projects in Wyoming's Great Divide Basin. The most advanced of these projects to date is the Thor Project located adjacent to Ur-Energy's 18Mlb Lost Creek deposit<sup>2</sup> & operating ISR uranium plant<sup>2</sup>. Exploration to date has successfully identified mineralisation with economic potential based on widths, grades & depth of mineralisation (ASX release 29 March 2022)3.

The approvals process is underway for approximately 40,000 feet of follow-up drilling at the Company's Thor ISR uranium project area and circa 60,000 feet of maiden drilling at the Wicket, Teebo, Odin and Loki projects areas. The program is expected to commence starting at the Thor ISR project during July<sup>4</sup>.

#### -Ends-

# GTI RESOURCES LTD - PROJECT PORTFOLIO

## GDB/GREEN MOUNTAIN ISR URANIUM. WYOMING, USA

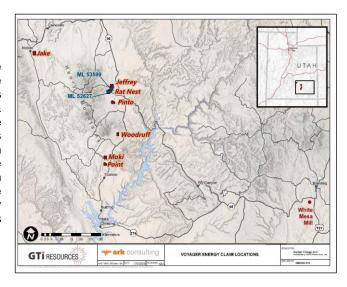

GTI resources has acquired 100% of ~22,000 acres (~8,900 hectares) across several groups of strategically located and underexplored mineral lode claims (Claims) and 2 state leases (Leases), prospective for sandstone hosted uranium that is amenable to low cost, low environmental impact ISR mining. The properties are principally located in the Great Divide Basin (GDB), Wyoming, USA. The Wyoming Properties are located in proximity to UR Energy's (URE) Facility & Rio Lost Creek ISR Tinto's Sweetwater/Kennecott Mill and the GDB roll front REDOX boundary. GTI also recently announced it has agreed to acquire 13,800 acres of claims at Green Mountain in Wyoming adjacent to GTI's existing GDB projects<sup>5</sup>. The Green Mountain Project contains a number of uranium mineralised roll fronts hosted in the Battle Springs formation

close to several major deposits. GTI plans to use historical drilling records to guide exploration.

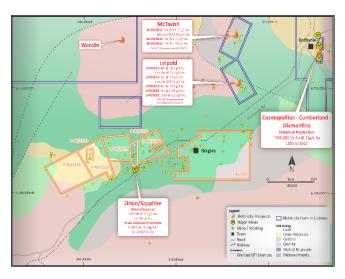

### HENRY MOUNTAINS URANIUM/VANADIUM, **UTAH, USA**

The Company has ~1,500 hectares of land holdings in the Henry Mountains region of Utah, within Garfield & Wayne Counties. Exploration has focused on approximately 5kms of mineralised trend that extends between the Rat Nest & Jeffrey claim groups & includes the Section 36 state lease block. Uranium & vanadium mineralisation in this location is generally shallow at 20-30m average depth. The region forms part of the prolific Colorado Plateau uranium province which historically provided significant uranium resources in the USA. Sandstone hosted ores have been mined in the region since 1904 and the mining region has historically produced in excess of 17.5Mt @ 2,400ppm U<sub>3</sub>O<sub>8</sub> (92Mlbs  $U_3O_8$ ) and 12,500 ppm  $V_2O_5$  (482Mlbs  $V_2O_5$ )<sup>6</sup>.

### NIAGARA (KOOKYNIE) GOLD, WESTERN AUSTRALIA<sup>7</sup>

The Niagara project is located ~6 km southwest of Kookynie in the central goldfields of Western Australia. The project comprises one granted exploration licence, and eight prospecting licences. Access to the project is provided via Goldfields Highway from the town of Menzies and the sealed Kookynie Road. The project is located within the central part of the Norseman-Wiluna greenstone belt. Historical mine records, from WAMEX reports, show that historical workings produced 5,100oz Au at a grade of 25.8 g/t between 1898 & 1914.8 On 03/02/2022, GTI advised ASX of the execution of a binding Tenement Sale & Purchase Agreement for the sale of the Niagara Gold Project to Regener8 Resources NL. via an IPO on the ASX9.
