

RC Drilling Commences at Coyote Gold Operation

The Board of Black Cat Syndicate Limited (“Black Cat” or “the Company”) is pleased to advise of the commencement of RC drilling at the Coyote Gold Operation (“Coyote”).

HIGHLIGHTS

- RC drilling has commenced on the high grade and near surface Speedy lode at Coyote
- Drilling will aim to upgrade and extend the Speedy lodes which currently contain a Resource of 54,000oz at 7.4g/t Au and has the potential to become the first open pit mined when operations recommence
- Numerous intercepts that sit outside the current Resource will be followed up, including:
 - 2m @ 16.74g/t Au from 66m (CYRC0317)
 - 4m @ 10.57g/t Au from 95m (CYRC0118)
 - 2m @ 49.07g/t Au from 96m (CYRC0455)
 - 2m @ 28.55g/t Au from 112m (CYRC0093)
- Other field activities have also commenced including stockpile sampling and sampling of unassayed historically drilled diamond core
- Diamond drilling will begin in July 2022

Black Cat Managing Director, Gareth Solly said:

“Just one week after completion of the Coyote acquisition our first RC drilling has commenced. Diamond drilling will also start in July and will be ongoing during 2022. The shallow, high grade Speedy lode has a Resource of 54,000oz at 7.4g/t Au which we expect to upgrade and to grow. Speedy is a clear example of the value and upside we see at Coyote. Results from all activities will be released regularly throughout 2022.”

RC Drilling Commences at Coyote Gold Operation

Drilling of Near Mine Targets

Coyote is hosted within a parasitic anticline within the larger folded Coyote sequence. Gold is hosted both within the fold hinge and the limbs as stratigraphic parallel gold veins. Veins generally range in scale from 1cm to 10cm, and often form as swarms. These veins frequently display bonanza grades. Mineralisation occurs within multiple stratigraphic horizons and is not closed off along strike, down plunge or at depth. Drilling will focus on extensional and infill drilling to simultaneously grow and upgrade the existing high-grade Coyote Resources.

Speedy

Initial RC drilling has commenced on the Speedy lode (Figure 3) and will be ongoing during 2022. Results from the drilling will be used to upgrade and grow the current Resource. Historical results not currently included in the Resource will also be followed up, including¹:

- 2m @ 16.74g/t Au from 66m (CYRC0317)
- 4m @ 10.57g/t Au from 95m (CYRC0118)
- 2m @ 49.07g/t Au from 96m (CYRC0455)
- 2m @ 28.55g/t Au from 112m (CYRC0093)

ABOUT BLACK CAT SYNDICATE (ASX: BC8)

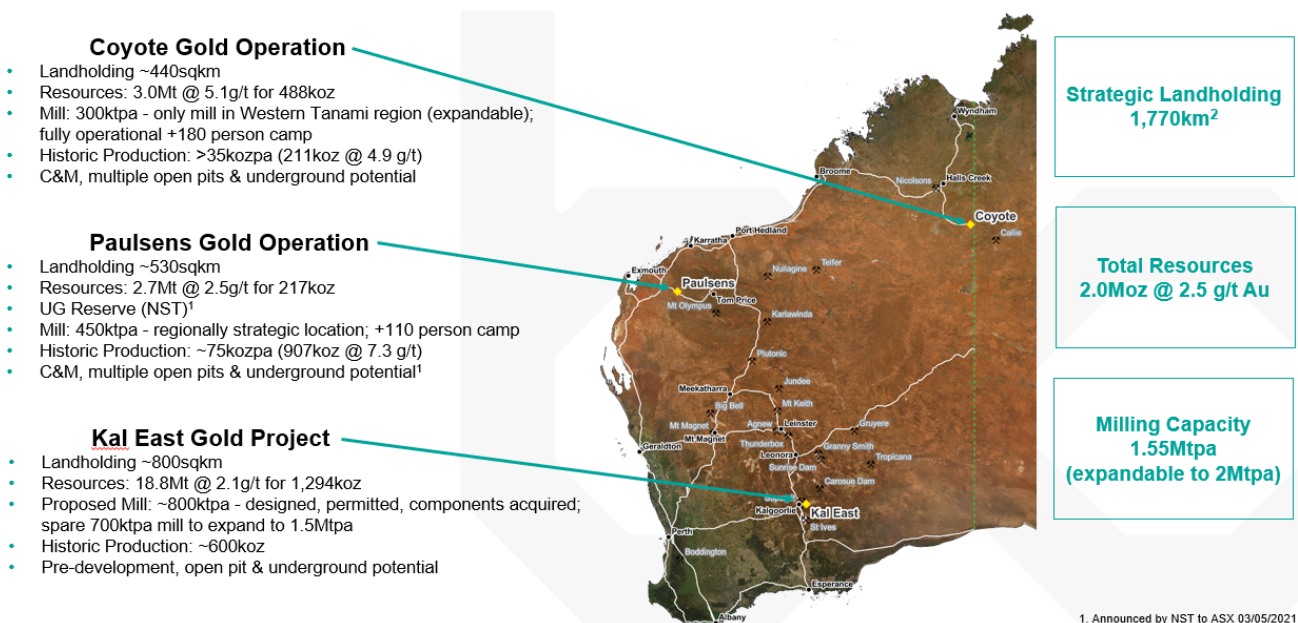

Black Cat's vision is to be a responsible gold mining company with three 100% owned operations. The three operations are:

Coyote Gold Operation: Coyote is located in Northern Australia, ~20km on the WA side of the WA/NT border, on the Tanami Highway. There is a well-maintained airstrip on site that is widely used by government and private enterprises. Coyote consists of an open pit and an underground mine, 300,000tpa processing facility, +180 person camp and other related infrastructure. The operation is currently on care and maintenance and has a Resource of 3.0Mt @ 5.1g/t Au for 488koz with numerous high-grade targets in the surrounding area.

Paulsens Gold Operation: Paulsens is located 180km west of Paraburdoo in WA. Paulsens consists of an underground mine, 450,000tpa processing facility, +110 person camp, numerous potential open pits and other related infrastructure. The operation is currently on care and maintenance, has a Resource of 2.7Mt @ 2.5g/t Au for 217koz and significant exploration and growth potential.

Kal East Gold Project: comprises ~800km² of highly prospective ground to the east of the world class mining centre of Kalgoorlie, WA. Kal East contains a Resource of 18.8Mt @ 2.1g/t Au for 1,294koz, including a preliminary JORC 2012 Reserve of 3.7Mt @ 2.0 g/t Au for 243koz.

Black Cat plans to construct a central processing facility near the Majestic Mining Centre, ~50km east of Kalgoorlie. The 800,000tpa processing facility will be a traditional carbon-in-leach gold plant which is ideally suited to Black Cat's Resources as well as to third party free milling ores located around Kalgoorlie.

COMPETENT PERSON'S STATEMENT

The information in this announcement that relates to geology, and planning was compiled by Mr. Iain Levy, who is a Member of the AIG and an employee, shareholder and option holder of the Company. Mr. Levy has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr. Levy consents to the inclusion in the report of the matters based on the information in the form and context in which it appears.

The Company confirms that it is not aware of any new information or data that materially affects the information in the original reports, and that the form and context in which the Competent Person's findings are presented have not been materially modified from the original reports.

Where the Company refers to the exploration results, Mineral Resources, and Reserves in this report (referencing previous releases made to the ASX), it confirms that it is not aware of any new information or data that materially affects the information included in that announcement and all material assumptions and technical parameters underpinning the Mineral Resource and Reserve estimates with that announcement continue to apply and have not materially changed.

Notes on Reserve:

- Cut-off Grade:
 - Open Pit - The Ore Reserves are based upon an internal cut-off grade greater than or equal to the break-even cut-off grade.
 - Underground - The Ore Reserves are based upon an internal cut-off grade greater than the break-even cut-off grade.
- The commodity price used for the Revenue calculations was AUD \$2,300 per ounce.
- The Ore Reserves are based upon a State Royalty of 2.5% and a refining charge of 0.2%.
- Mineral Resources are reported as inclusive of Ore Reserves.
- Tonnes have been rounded to the nearest 100 t for open pit and 1000 t for underground, grade has been rounded to the nearest 0.1 g/t, ounces have been rounded to the nearest 100 oz. Discrepancies in summations may occur due to rounding.
- This Ore Reserve statement has been compiled in accordance with the guidelines of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (The JORC Code – 2012 Edition).
