

## EXCELLENT RESULTS RETURNED FROM RESOURCE DRILLING AT BOTH MT GIBSON AND KARLAWINDA

### Highlights

#### Mt Gibson Gold Project (MGGP)

- A total of 80,124 metres (514 holes) of planned 81,000 metre RC resource definition and extension drilling programme completed to the end of June 2022.
- Assays received from 280 holes since the last update (first 55 holes) in April 2022 continue to return exceptional results within and extensional to the resource including:

##### **Outside current resource**

- 4 metres @ 118.74g/t from 142 to 146m
- 10 metres @ 6.08g/t from 48 to 58m
- 12 metres @ 3.44g/t from 78 to 90m
- 24 metres @ 2.27g/t from 256 to 280m
- 35 metres @ 1.55g/t from 200 to 235m
- 5 metres @ 8.09g/t from 199 to 204m
- 10 metres @ 4.07g/t from 85 to 95m
- 16 metres @ 2.52g/t from 202 to 218m

##### **Within current resource**

- 16 metres @ 3.15g/t from 170 to 186m
- 20 metres @ 2.72g/t from 107 to 127m
- 11 metres @ 6.75g/t from 98 to 109m
- 10 metres @ 4.48g/t from 58 to 68m
- 17 metres @ 3.61g/t from 37 to 54m
- 5 metres @ 17.23g/t from 79 to 84m
- 34 metres @ 2.93g/t from 121 to 155m
- 12 metres @ 6.85g/t from 144 to 156m
- Drilling on the unmined Saratoga and Orion North trends (east of the main Gibson trend) has defined zones of better grade within the resource shell and extending below the resource shell.
- Capricorn has expanded the programme from 81,000m to 105,000m in order to follow up and extend strong results returned both within and outside current resource optimisation shells.
- Results from this extended programme of drilling will be included in the updated Mineral Resource Estimate (MRE) in September 2022 and maiden Ore Reserve Estimate (ORE) in October 2022.
- In an important step for development of the project, Capricorn's application for a mining lease over the area required for a mining operation has been granted for an initial term of 21 years.
- 30,000 metres first pass regional exploration AC and RC drilling across a number of high priority target areas to commence in the September 2022 quarter.

#### Karlawinda Gold Project (KGP)

- 23,664 metres (109 holes) of a planned 30,000m resource infill and extension RC drilling programme completed to the end of June 2022.
- Assays have been returned from 51 holes with encouraging gold results including:
  - 10 metres @ 5.04g/t from 99 to 109m\*
  - 3 metres @ 11.16g/t from 169 to 172m\*
  - 22 metres @ 1.20g/t from 152 to 174m
  - 18 metres @ 1.40g/t from 140 to 158m
  - 18 metres @ 1.36g/t from 197 to 215m\*
  - 26 metres @ 1.19g/t from 168 to 194m
  - 6 metres @ 4.36g/t from 54 to 60m
  - 26 metres @ 0.97g/t from 175 to 201m\*

\* intercept outside the current 2020 MRE

- 
- High grade intercepts have been returned near the base of, below and along strike of current resource pit optimisations, which remain open down dip and south along strike.
  - Results to form part of update to the Karlawinda MRE targeted for September 2022 and ORE in October 2022.
  - A 30,000 metre regional exploration AC programme commenced in July 2022 following up AC gold anomalies adjacent to the shear zone at Mundiwindi and surface geochemical anomalies at Jim's East, Renaissance and Forfar prospects.
  - A 3,010 metre RC programme planned to commence at the Muirfield prospect in the current quarter following up mineralisation reported in the December 2021 quarter.

**Capricorn Executive Chairman Mark Clark commented:**

“Exceptional results from resource definition and extensional drilling at Mt Gibson are continuing to point to the quality and growth potential of the resource there. We made the obvious decision to extend the programme by at least another 24,000 metres given the strength of results within and below the current resource shells. We are excited by the potential of Mt Gibson to become Capricorn’s second gold mine. We also continue to return strong results from the resource infill and extensional drill programme at Karlawinda. These two critical drill programmes will culminate in resource and reserve studies for both projects and are expected to underpin the delivery of Capricorn’s organic growth strategy.”

*MGGP - RC drilling at Lexington Pit (Looking North)*

## Mt Gibson

### Infill and Extensional RC Drilling

In January 2022 two RC rigs commenced drilling a planned 81,000 metre drill programme across the 8 kilometres of strike of current resources at the Company's 100% owned Mt Gibson Gold Project (MGGP).

The objectives of this programme included:

- Infill drilling of the resource to broadly bring the drill density to 25 x 25 metres;
- Test gaps between resource pit optimisation shells along the 8 kilometres of strike; and
- Test for extensions of gold mineralisation below the current resource shells.

Early results from this drilling were announced in April 2022 based on the first 29,842 metres of drilling. To the end of June 2022 a further 50,282 metres of drilling has been completed taking the total drilling to 80,124 metres. Following a review of very encouraging ongoing results Capricorn has extended the programme to 105,000 metres to continue testing strong extensional areas.

The 514 holes (80,124 metres) completed to date have mainly focussed on the Orion Mine Trend, one of the more significant areas of the 2.08 million ounce resource at MGGP.

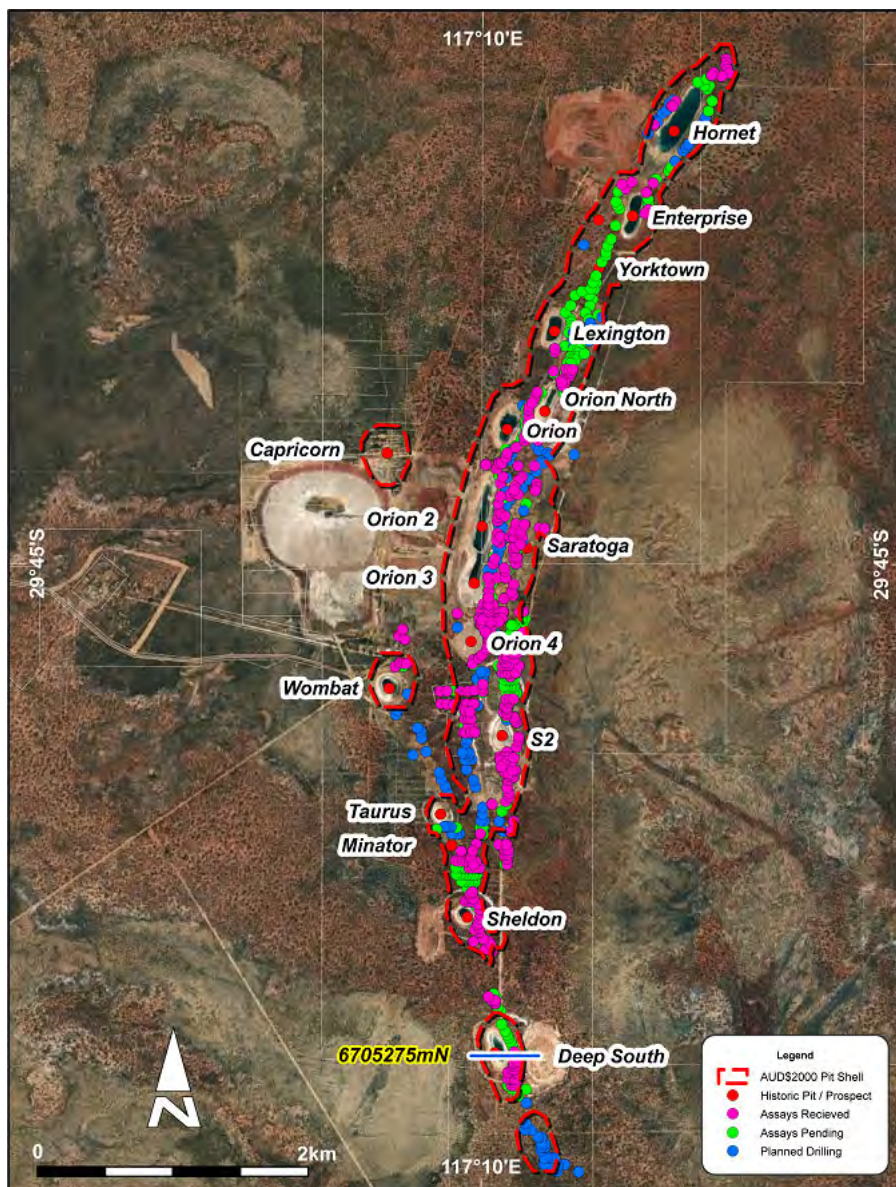

Figure 1. Drilling progress over the MGGP 8km long mine trend & MRE pit crests

Assays have now been received from the first 335 holes (46,342 metres). Assays received from 280 holes since the last update continue to return very encouraging results including:

Hole No	Easting	Northing	From (m)	To (m)	Width (m)	Grade (g/t Au)

\*intercept is outside the current 2021 MRE

A comprehensive table of significant results is included in Appendix 1.

Results of this extended programme will underpin an updated MRE targeted for completion in September 2022 and a maiden ORE targeted for completion in October 2022. Capricorn's current MRE of 79.7Mt at 0.8g/t Au for 2.083 million ounces is all classified as Inferred (in spite of drill density of 25m x 25m for the majority of the resource) due to the need to validate the quality of historical data.

The assays received from drilling to date continue to line up with the historic data both spatially and for grade tenor, providing validation of the historic +660,000 metre drill database acquired with the project in July 2021 and the expectation that a significant proportion of the Inferred resource will be converted to Indicated category.

Current and previously reported drilling at the depth extremities of the resource optimisation shells (where historic drill density is broader spaced) and below them has returned results consistent with Capricorn's geological interpretations of mineralisation location, widths and grade tenor. Drilling across the project to date indicates that mineralisation remains open down dip and along strike to the north and south with multiple stacked lodes intersected.

Drilling along the Saratoga trend and Orion North trend (unmined structure to the east of the main mined Mt Gibson trend) has defined zones of better grade within the resource shell and assay results that extend below the resource shell (refer Figure's 5 & 6 – Cross section 6709050mN and 6709870mN).

## Long Sections and Cross Sections

The plan below shows the drilling activity from the infill and extensional RC programme and the location of the following long and cross sections.

Figure 7. Orion 3 cross section – extensional drilling following up previously reported CMRC035 intercept

Figure 8. Tobias Find Prospect cross section

Figure 9. S2 North cross section

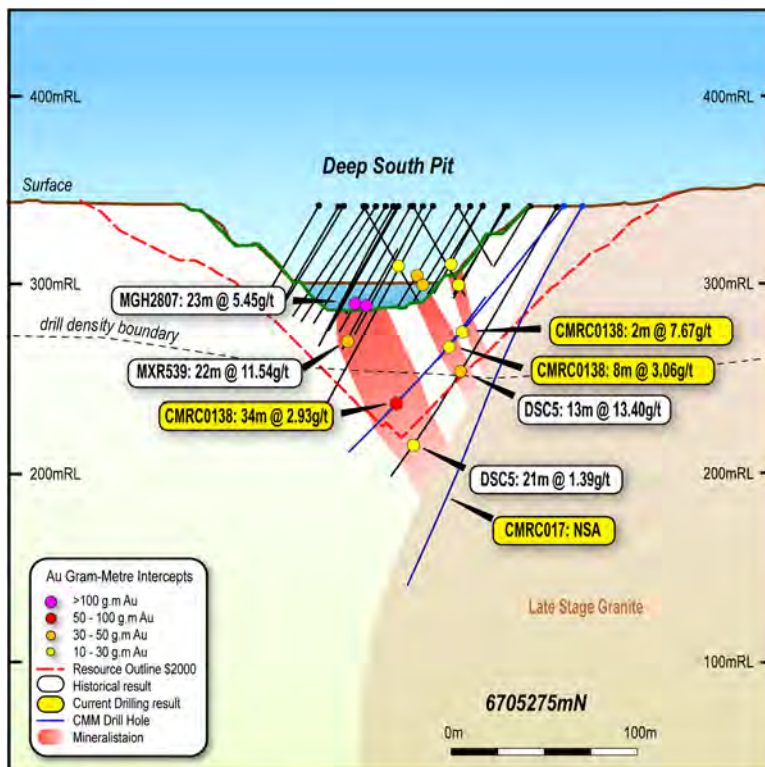

Figure 10. Deep South cross section

## Regional Exploration

A 30,000 metre first pass regional exploration AC and RC drill programme has been planned to commence in the September 2022 quarter pending environmental and heritage approvals. Several high priority targets within 5 kilometres of the central resource area will be tested including extensions of the Mt Gibson Mine Trend, McDonalds/Highway Area and Taurus Trend.

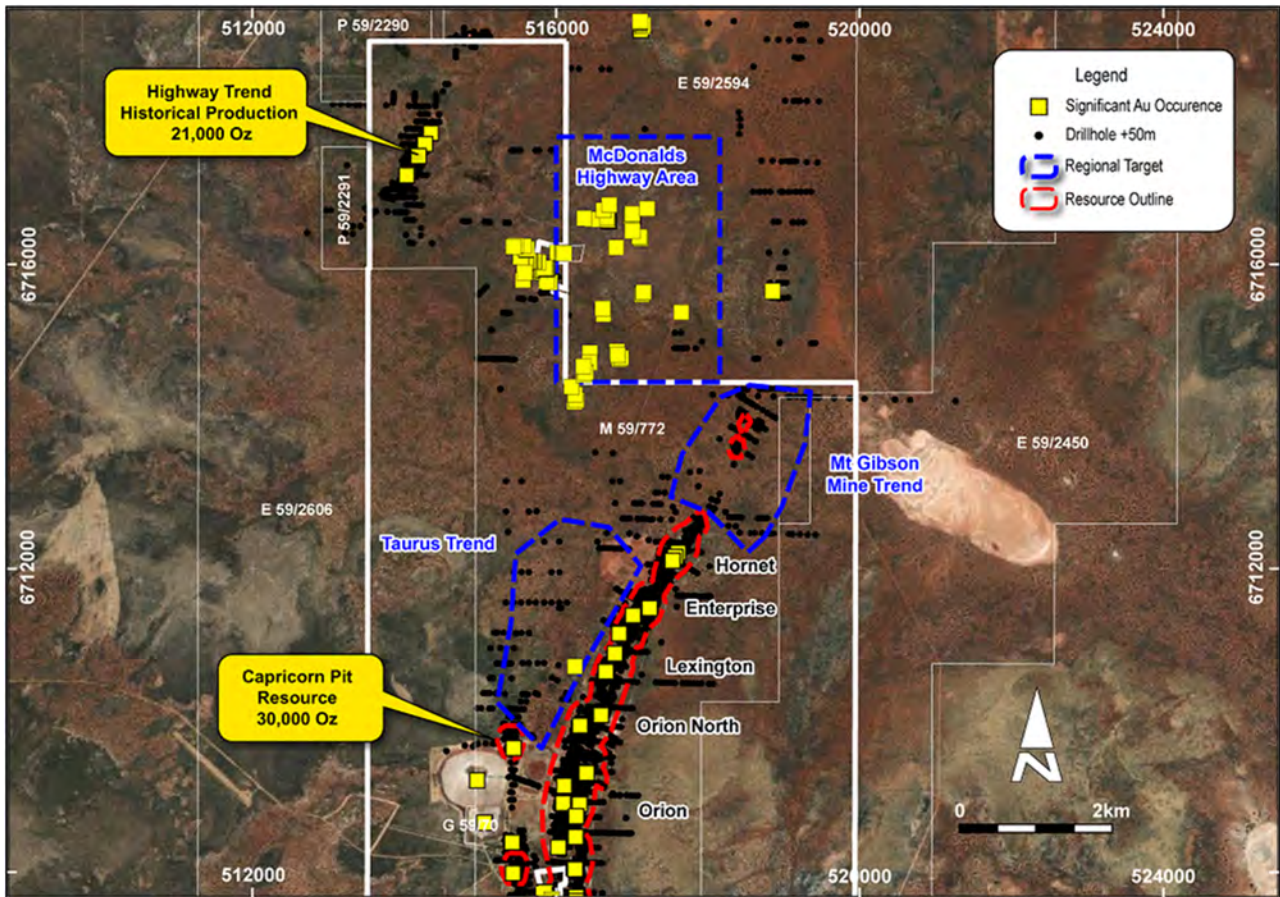

Figure 11. Regional exploration targets in close proximity to Mt Gibson Resource

### **Mt Gibson Mine Trend**

A drone magnetic geophysical survey has been completed over the northern extent of the Mt Gibson mine trend upgrading current imagery which has generated multiple high priority targets. Imagery has defined geological and structural signatures north of the current mine trend known to host mineralised deposits within the MGGP.

Due to the close proximity to significant in-situ resources and the trend's geological and structural signatures, this target area is considered highly prospective for further gold discovery.

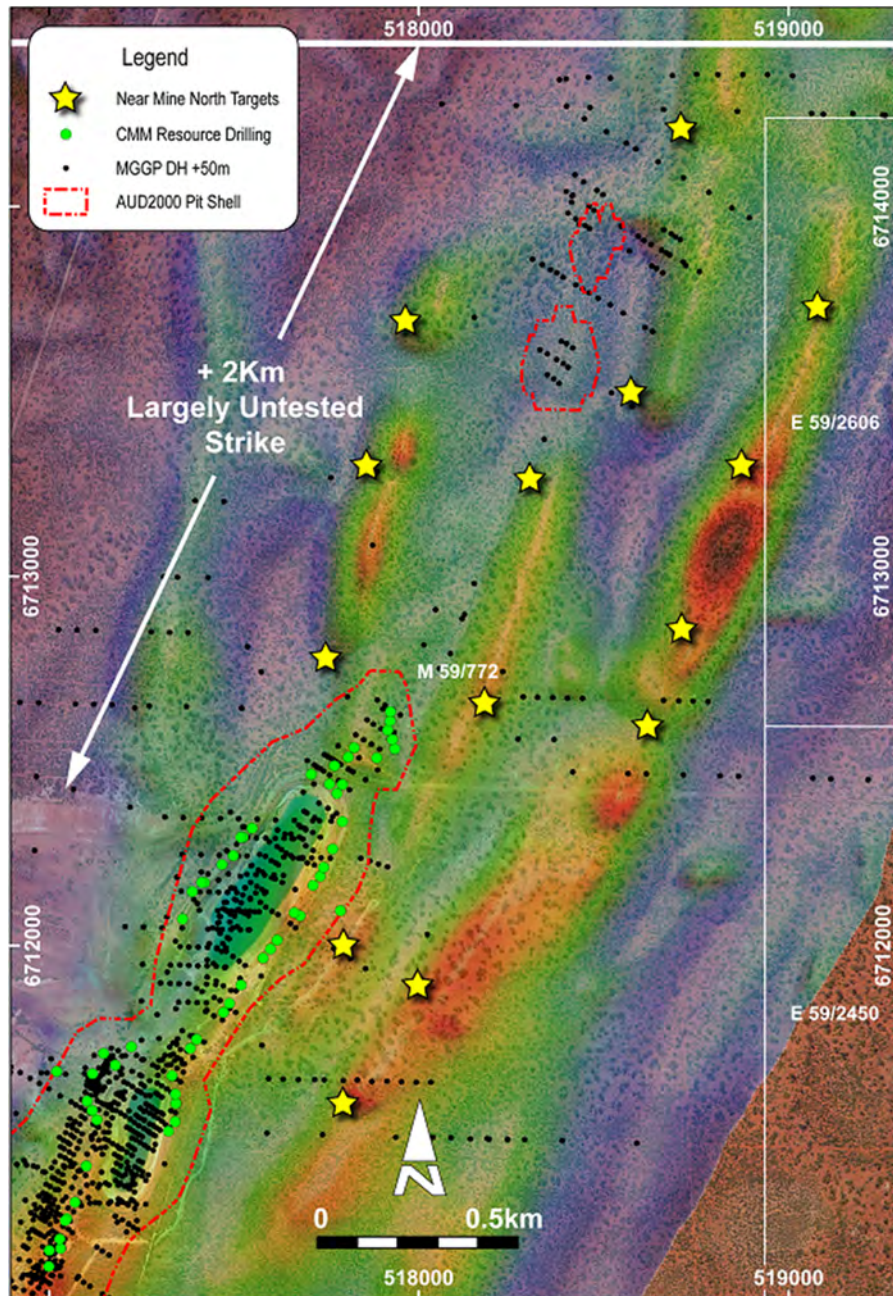

Figure 12. Aeromagnetic survey of northern extent of Mt Gibson Mine Trend

### Highway/McDonalds

The Highway/McDonalds area located 5km north of the current resources has been identified as a significant exploration target. The area has a prospective geological and structural setting although much of the area is covered by up to 20 metres of transported cover.

The area represents a unique opportunity to discover economic deposits at surface with under explored gold occurrences identified including significant historical workings at Gold Bar, Gibson and Leakes Find prospects located within Capricorn tenure. Field inspections have confirmed the mineralisation is associated with north south striking quartz veining within amphibolite hosted shear zones, a similar orientation and geological setting to the nearby Mt Gibson Mine Trend.

This area continues to be a high priority target and subject to completion of heritage surveys, first pass AC drilling is expected to commence late in the current quarter.

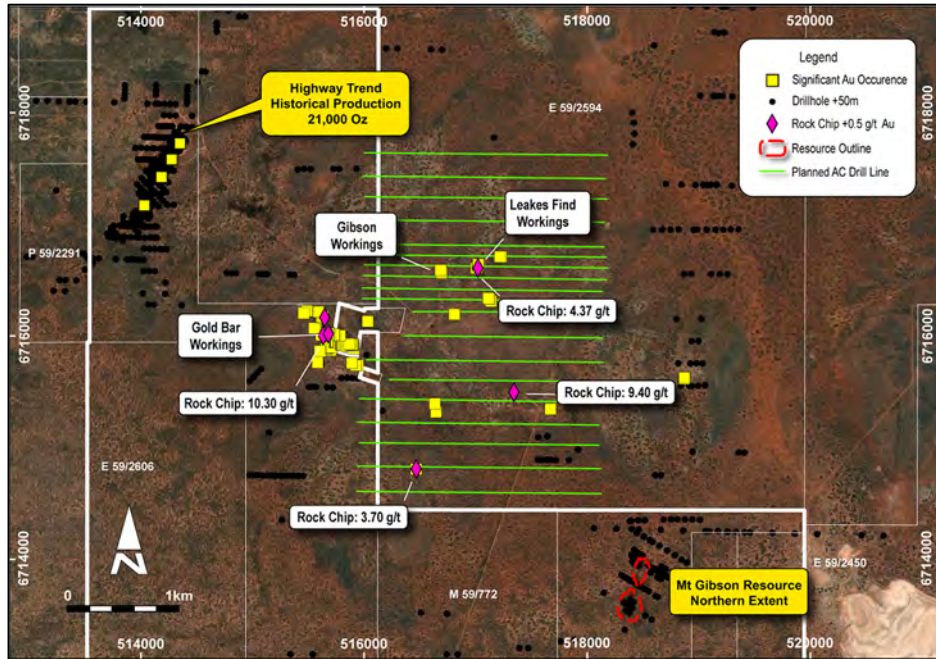

Figure 13. Proposed AC drill lines at the Highway/McDonalds target area showing location of gold occurrences in close proximity to the Highway mine Trend and current MGGP northern resource extent

Figure 14. Undrilled Leakes Find workings within proposed AC Area

### Taurus Trend

The Taurus Trend lies immediately to the west of the Gibson Trend. Unlike the Gibson Trend, mineralisation is associated with a continuous intrusive unit, rather than a structural shear control. This mineralisation is characterised by multiple discrete ore bodies and mineralised quartz veining within a weakly foliated, biotitic monzogranite. The deposits on this trend include Deep South, Sheldon, Taurus, Wombat and Capricorn.

---

RC drilling, planned to commence late in the current quarter, will focus on gold mineralisation identified in 1990 sterilisation drilling of TSF 2 directly south of the unmined Capricorn Resource (30,000oz). Further drilling immediately east of the TSF 2 also identified significant mineralisation within drillholes OSP291, 7m @ 3.13 g/t from 81m and OSA320, 7m @ 2.64 g/t 44m (EOH). This 1990 drilling has never been followed up as previous processing infrastructure (now removed) may have impeded further drilling.

### **Project Development**

Technical work and studies across numerous disciplines as required for reserve estimation, feasibility studies, permitting applications and ultimately project development continue in parallel with the resource definition drilling.

A total of 3,522 metres (20 holes) of diamond drilling have been completed for technical studies to inform the maiden ORE and feasibility studies. Waste rock, metallurgical (diamond core and bulk RC sampling) and geotechnical testwork programmes have commenced to investigate and define geochemical properties, optimal processing parameters and associated metallurgical performance of ore and waste to be mined from the project.

Systematic multielement sampling of mineralised and barren downhole RC and DD material throughout the current drill area has been completed to gain an understating of the ore and waste rock geochemical characteristics for environmental applications.

Testwork data will provide inputs for the updated MRE targeted for completion in September 2022 and maiden ORE targeted for completion in October 2022.

*Figure 17. Geotechnical Diamond Drilling at Orion 1 (Looking East)*

### **Mining Lease**

In an important step towards development of the MGGP, Capricorn's application for a mining lease at MGGP was granted in June 2022 for an original term of 21 years. The granted mining lease covers all the areas required to fully develop the mining project.

### **Heritage Surveys**

Large scale archaeological and ethnographic clearance works have been completed and are progressing over critical infrastructure and exploration areas.

## Karlawinda

### Infill and Extensional RC Drilling

A near mine 30,000 metre (129 holes) RC drilling programme commenced in March 2022 at Capricorn's wholly owned Karlawinda Gold Project (KGP) to infill and extend the current MRE of 86.7Mt @ 0.80 g/t for 2.15 million ounces of gold. The programme covers 1.8 kilometres of strike from the Bibra Open Pit to the Southern Corridor and Tramore areas in the south and is designed to:

- Test for extensions of gold mineralisation below the current Bibra Open Pit resource shell;
- Increase drill density of the Southern Corridor and Tramore prospects to upgrade current pit shell optimisations; and
- Test for stacked lodes below areas of shallow drilling between the current Bibra Open Pit and Southern Corridor deposit.

A total of 23,664 metres (109 holes) of drilling was completed to 30 June 2022 with high grade intercepts returned near the base of, below and along strike of current resource pit optimisations, which remain open down dip and south along strike. Significant results received to date include:

Hole No	Easting	Northing	From (m)	To (m)	Width (m)	Grade (g/t Au)
KBRC1708	203625.5	7367829.3	140	158	18	1.4
KBRC1727*	203652.1	7367480.9	197	215	18	1.36
KBRC1728	203756.8	7367499.6	90	91	1	29.23
KBRC1728*	203756.8	7367499.6	175	201	26	0.97
KBRC1733	203535.5	7367918.2	168	194	26	1.19
KBRC1748	203754.2	7367481.6	152	174	22	1.2
KBRC1752	203594.7	7367913.7	115	125	10	2.13

KBRC1766	203677.6	7367396	135	149	14	1.74
KBRC1782*	203843.1	7367666.7	169	172	3	11.16
KBRC1802*	203915	7368111	99	109	10	5.04

\*intercept is outside the current 2021 MRE

A comprehensive table of significant results is included in Appendix 1.

Results of this programme will underpin an updated MRE targeted for completion in September 2022 and updated ORE targeted for completion in October 2022.

Directly south of the Bibra Open Pit, within the Southern Corridor and Tramore area, drill spacing has been reduced to 25 x 25m. Assays for 90% of this area have been returned, with significant intercepts occurring within and below the current \$2,000 optimised resource shell. The encouraging results also intersected a lode to the south along strike of the current pit design. Results from the current programme confirm mineralisation is open down dip and along strike to the south.

The majority of pending assays are within the northern part of the programme area as shown in Figure 17. Drill holes are testing 100m down dip extensions of the Bibra Open Pit and exploring for stacked lodes within areas of shallow drilling between the northern and southern resource area.

In both areas, up to 10m intervals of sulphidic silicious zones and magnetite have been logged. This indicates the existence of stacked lodes and a likely extension of the ore zone within and below the base of the current resource shell.

Figure 16. Bibra Open Pit section

### Long Section and Cross Sections

The plan below shows the drilling status relative to the current resource shell and the location of the following long and cross sections.

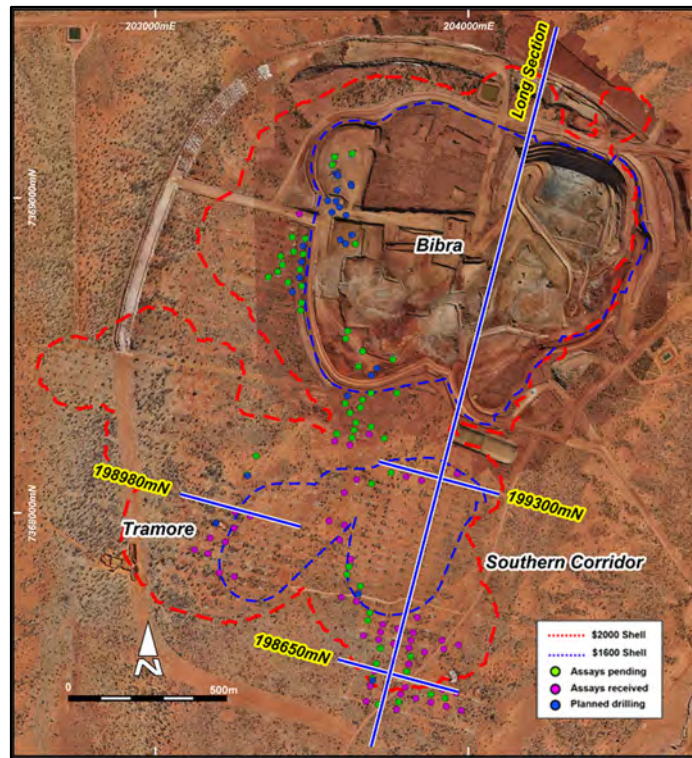

Figure 17. Drilling progress along the KGP 1.8 km long mine trend.

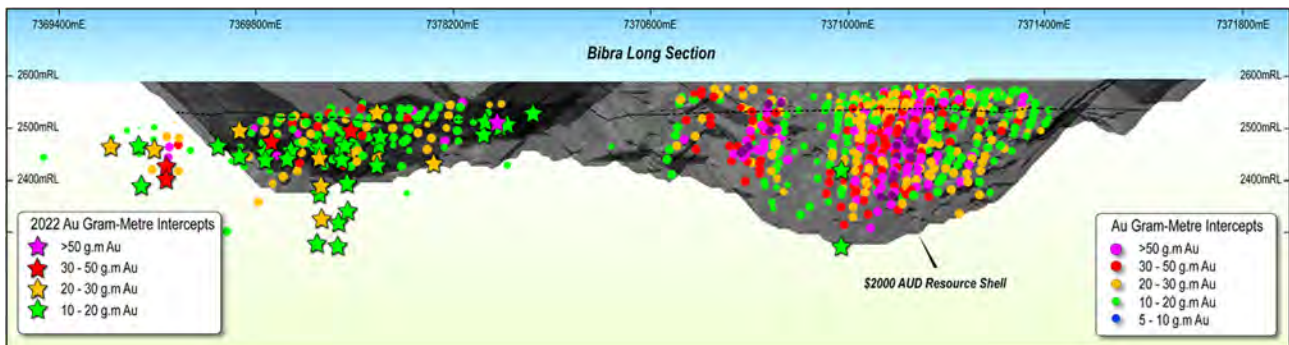

Figure 18. Long section for Bibra trend showing historic and current +10g/m drill intercepts

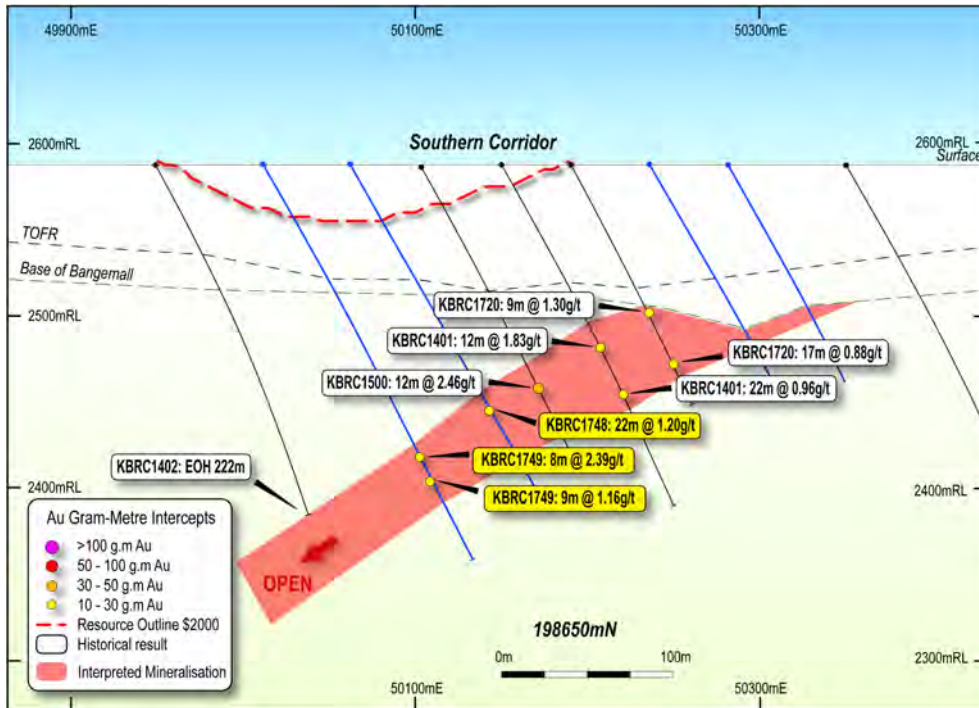

Figure 19. Southern Corridor cross section

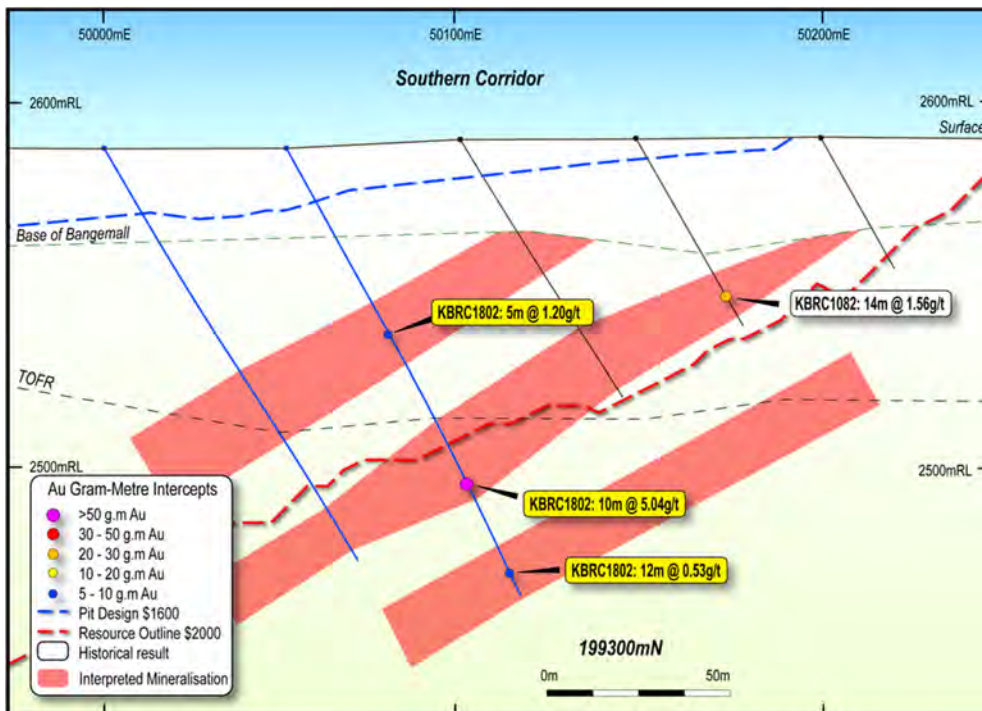

Figure 20. Southern Corridor cross section

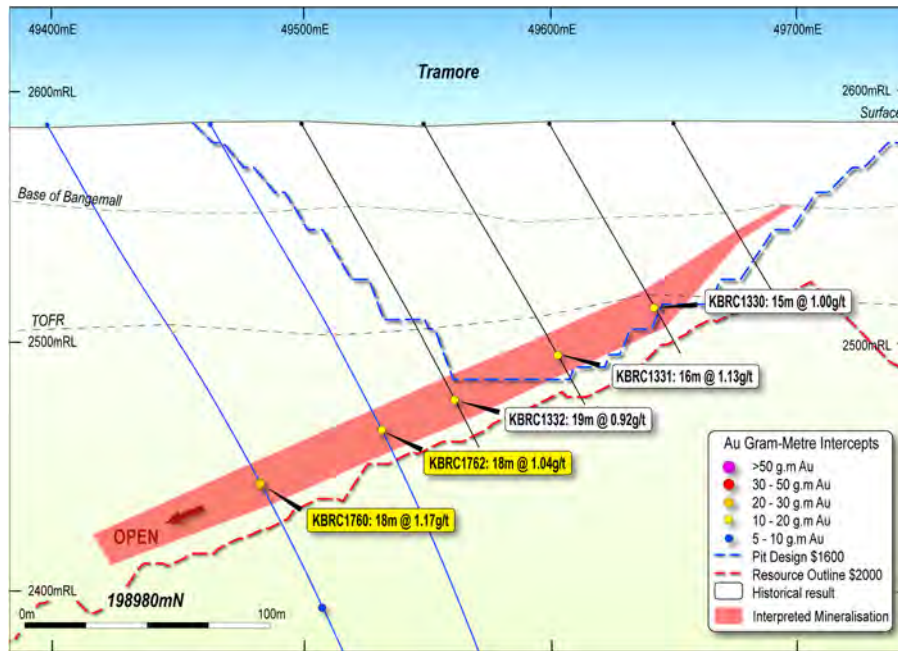

Figure 21. Tramore cross section

### Regional Exploration

Multiple exploration projects were advanced during the quarter. Project areas are situated proximal to either the Nanjilgardy Fault or the Sylvania Inlier and Pilbara Craton margin (refer Figure 22).

The Nanjilgardy Fault is a regional scale structure that is known to have controls on gold mineralisation in the Pilbara craton, including the Paulsens (ASX: BC8) and Ashburton (ASX: KZR) gold projects. Situated on the southern extents of CMM tenure, the Sylvania Inlier and Pilbara Craton margin is considered a high strain zone with high prospectivity for mineralising fluids with origins from igneous intrusions formed from partial melting of a mantle wedge or enriched fluid remobilisation through regional metamorphism. This Craton boundary is interpreted to play a significant role in the placement of ore forming fluids at the +2Moz Bibra gold deposit.

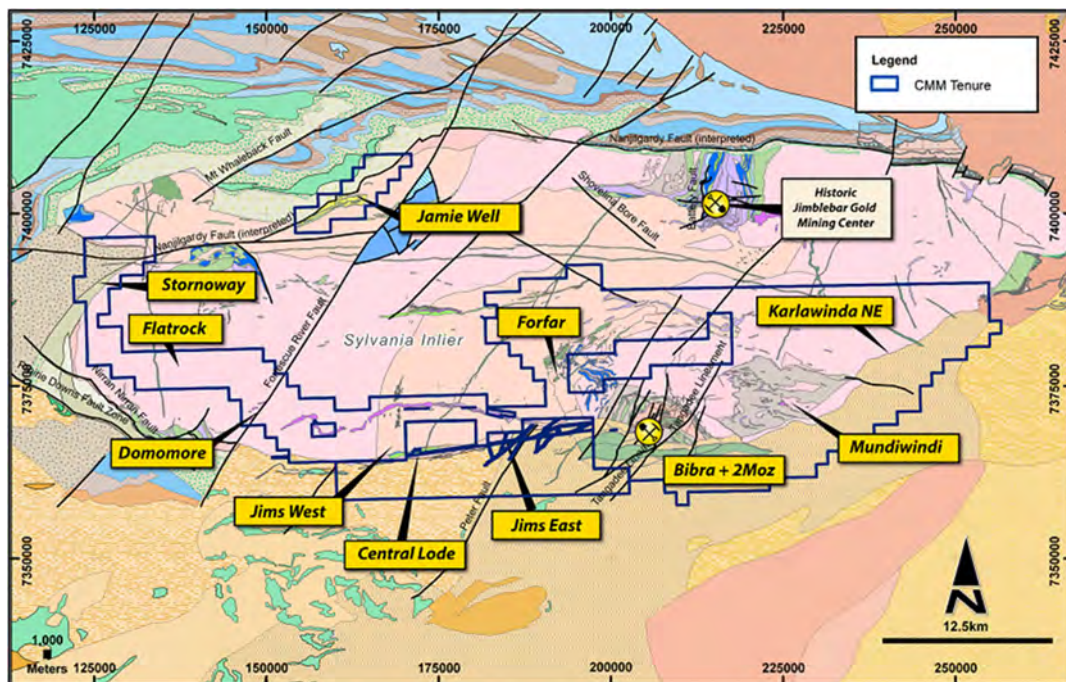

Figure 22. Karlawinda regional exploration targets

## Near Mine AC Targeting

A 30,000 metre regional AC drilling campaign has commenced with drilling focusing on project areas along the Nanjilgardy Fault or the Sylvania Inlier and Pilbara Craton margin. The significant mineralisation intersected from FY22 first pass drill campaigns at the Mundiwindi, Muirfield and Carnoustie projects validates the exploration targeting strategies and warrant further work.

Drilling will focus on the Mundiwindi, Jim's East and the newly Identified Forfar and Renaissance prospects. RC drilling at the Muirfield prospect is also planned for the current quarter following up mineralisation reported in the December 2021 quarter with further RC and AC drilling planned at Carnoustie in the December 2022 quarter.

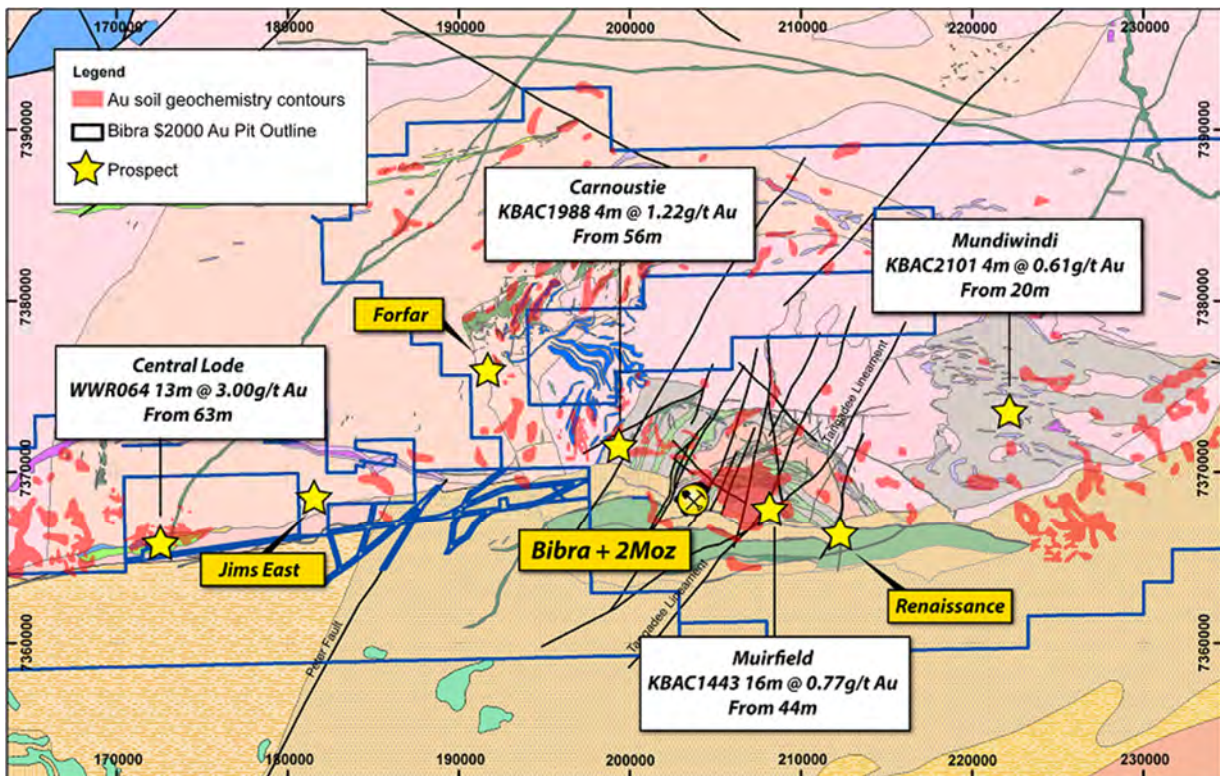

Figure 23. Near mine AC targets showing historic and newly identified gold occurrences along the Sylvania Inlier and Pilbara Craton margin interpreted to play a role in mineralisation at the +2Moz Bibra gold deposit.

## Mumbakine Well

The newly acquired Mumbakine Well Project is located on exploration license E52/3531 which is contiguous to Capricorn's existing KGP tenure and is less than 10 kilometres from the processing facility and Bibra open pit. The Project covers approximately 361 square kilometres and lies adjacent to the KGP access road to the Great Northern Highway.

At the Jims Vein prospect, historical rock chips collected from a northerly trending anastomosing quartz vein hosted in granite has returned up to 180 g/t Au, 1.2% Pb, 10 g/t Ag. At the nearby ENE trending Central Lode prospect 1994 RC drilling by Battle Mountain (Australia) Inc intersected, 13m @ 3.00 g/t Au from 63m (Refer ASX Announcement 30 May 2022). Mineralisation is hosted in a large ENE shear zone with quartz stockwork vein systems along mafic/sediment contacts and granite/sediment contacts.

Geochemical ultrafine surface sampling (UFF) over the northern extents of E52/3531 and the projects known Au occurrences will commence in the current quarter with first pass Aircore drilling to follow. Undercover gravity high and structural anomalies have been identified and present priority RC drill targets. The RC locations identified sit in proximity to the craton margin and display similar geological and geophysical characteristics to the Bibra Gold deposit.

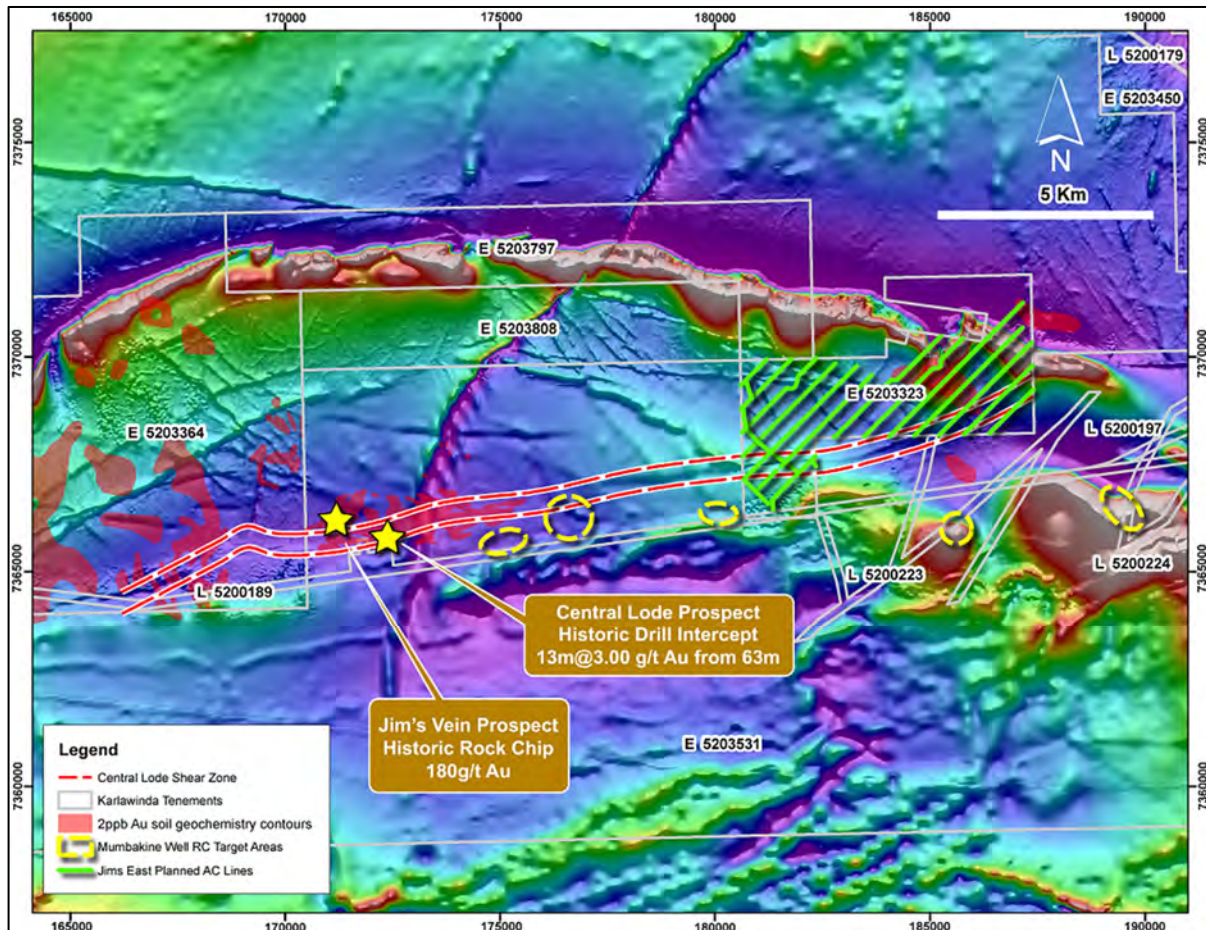

Figure 24. Mumbakine Well Prospect target areas

## Forward Looking Statements

This announcement may contain certain “forward-looking statements” which may not have been based solely on historical facts, but rather may be based on the Company’s current expectations about future events and results. Where the Company expresses or implies an expectation of belief as to future events or results, such expectation or belief is expressed in good faith and believed to have a reasonable basis. The detailed reasons for that conclusion are outlined throughout this announcement and all material assumptions are disclosed.

However, forward looking statements are subject to risks, uncertainties, assumptions and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by such forward-looking statements.

Such risks include, but are not limited to resource risk, metals price volatility, currency fluctuations, increased production costs and variances in ore grade or recovery rates from those assumed in mining plans, as well as governmental regulation and judicial outcomes.

For a more detailed discussion of such risks and other factors, see the Company’s Annual Reports, as well as the Company’s other filings. Readers should not place undue reliance on forward looking information. The Company does not undertake any obligation to release publicly any revisions to any “forward looking statement” to reflect events or circumstances after the date of this announcement, or to reflect the occurrence of unanticipated events, except as may be required under applicable securities laws.

## Competent Persons Statement

The information in this report that relates to Exploration Results is based on information compiled or reviewed by Mr. William Higgins who is a full-time employee of the Company. Mr. Higgins is a current Member of the Australian Institute of Geoscientists and has sufficient experience, which is relevant to the style of mineralisation and types of deposit under consideration and to the activities undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the “Australasian Code of Reporting of Exploration Results, Mineral Resources and Ore Reserves”. Mr. Higgins consents to the inclusion in the report of the matters based on the information in the form and context in which it appears.

The detailed information relating to the Ore Reserves and Mineral Resources reported in this announcement were announced in the Company’s ASX announcements dated 17 April 2020 and 28 July 2021. The Company confirms that it is not aware of any new information or data that materially affects the information included in the ASX announcements dated 17 April 2020 and 28 July 2021 and all material assumptions and technical parameters underpinning the estimates in the relevant market announcements continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Persons’ findings are presented have not materially changed from previous market announcements. The reports are available to view on the ASX website and on the Company’s website at [www.capmetals.com.au](http://www.capmetals.com.au) .

The Competent Person’s consents remain in place for subsequent releases by the Company of the same information in the same form and context, until the consent is withdrawn or replaced by subsequent report and accompanying consent

**Appendix 2**  
**JORC Code, 2012 Edition – Table 1**  
**Section 1 Sampling Techniques and Data**  
 (Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
<b>Sampling techniques</b>	<ul style="list-style-type: none"> <li>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</li> <li>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</li> <li>Aspects of the determination of mineralisation that are Material to the Public Report.</li> <li>In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</li> </ul>	<p>RC drilling at KGP and MGGP completed by Topdrill with the same techniques and process at both. For Reverse Circulation (RC) drilling 2kg - 3kg samples are split from dry 1m bulk samples. The sample was collected through a cyclone and cone splitter. Once drilling reached fresh rock a fine spray of water was used to suppress dust and limit the loss of fines thorough the cyclone chimney.</p> <p>RC Field duplicates were collected at a ratio of 1:40 and collected at the same time as the original sample through the B chute of the cone splitter. Matrix matched CRMS and OREAS certified reference material (CRM) were inserted at a ratio of 1:40. The grade ranges of the CRM's were selected based on grade populations and economic grade ranges.</p> <p>Samples were sent to the laboratory where they were pulverised to produce a 50 g charge for fire assay.</p> <p>DD: Diamond Drilling was completed at KGP by Topdrill with triple tube HQ core sampled as quarter core. No field duplicates were sampled for the DD, and CRMS and OREAS certified reference material (CRM) were inserted at a ratio of 2:25.</p>
<b>Drilling techniques</b>	<ul style="list-style-type: none"> <li>Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</li> </ul>	<p>RC: Topdrill Drilling drill rig was used to drill the RC drill holes: Hole diameter was 140mm.</p> <p>DD: Topdrill Sandvik DE840 Truck Mounted Drill Rig was used to drill the DD drill holes. Hole diameter is HQ triple tube, orientation tools used are Axis Champ North Seeking Gyro tool.</p>
<b>Drill sample recovery</b>	<ul style="list-style-type: none"> <li>Method of recording and assessing core and chip sample recoveries and results assessed.</li> <li>Measures taken to maximise sample recovery and ensure representative nature of the samples.</li> <li>Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</li> </ul>	<p>RC: Once drilling reached fresh rock a fine spray of water was used to suppress dust and limit the loss of fines thorough the cyclone chimney.</p> <p>At the end of each metre the bit was lifted off the bottom to separate each metre drilled.</p> <p>The majority of samples were of good quality with ground water having minimal effect on sample quality or recovery. There is no obvious relationship between sample recovery and grade.</p> <p>DD: Core recoveries were typically 100%, with isolated zones of lower recovery.</p>
<b>Logging</b>	<ul style="list-style-type: none"> <li>Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</li> <li>Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.</li> <li>The total length and percentage of the relevant intersections logged.</li> </ul>	<p>Reverse circulation chips were washed and stored in chip trays in 1m intervals for the entire length of each hole. Chip trays were stored on site in a sealed container. Chips were visually inspected and logged by an on-site geologist to record lithology (including rock type, oxidation state, weathering, grain size, colour, mineralogy, and texture), alteration, mineralisation, veining, structure, sample quality (dry/wet, contamination) and approximate water flow down hole. Mineralisation, veining and water flow were quantitative or semi-quantitative in nature; the remainder of logging was qualitative.</p> <p>DD: Logging processes include lithology, weathering, alteration, mineralisation, veining, RQD and core recovery and structure. Structural data for selected points has been collected as alpha and beta angles in core. These data are converted to Dip and Dip direction after loading to the database. Intervals for density measurement were identified while logging. All core was photographed both dry</p>

Criteria	JORC Code explanation	Commentary
<p><b>Sub-sampling techniques and sample preparation</b></p>	<ul style="list-style-type: none"> <li>• <i>If core, whether cut or sawn and whether quarter, half or all core taken.</i></li> <li>• <i>If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</i></li> <li>• <i>For all sample types, the nature, quality and appropriateness of the sample preparation technique.</i></li> <li>• <i>Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</i></li> <li>• <i>Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling.</i></li> <li>• <i>Whether sample sizes are appropriate to the grain size of the material being sampled.</i></li> </ul>	<p>and wet after logging.</p> <p>Logging is both qualitative and quantitative or semi-quantitative in nature.</p> <p>RC holes samples were split from dry, 1m bulk samples via a cone splitter directly from the cyclone.</p> <p>RC Field duplicates were collected at a ratio of 1:40 and collected at the same time as the original sample through the B chute of the cone splitter. Matrix matched CRMS and OREAS certified reference material (CRM) were inserted at a ratio of 1:40. The grade ranges of the CRM's were selected based on grade populations and economic grade ranges.</p> <p>The duplicates and CRM's were submitted to the lab using unique sample ID's.</p> <p>2kg – 3kg RC samples are submitted to the laboratory.</p> <p>Samples are oven dried at 105°C then jaw crushed to -10mm followed by a Boyd crush to a nominal -2mm. Samples were rotary split to 2.5kg. Samples were then pulverised in LM5 mills to 85% passing 75µm under sample preparation code SP3000 which consists of a 5-minute extended preparation for RC/Soil/RAB. The extended time for the pulverisation is to improve the pulverisation of samples due to the presence of garnets in the samples.</p> <p>All the samples were analysed for Au using the FA50AAS technique which is a 50g lead collection fire assay.</p> <p>This sample preparation technique is appropriate for the MGGP and KGP; and is standard industry practice for a gold deposit.</p> <p>DD: Sampling was completed at quarter core. Core was cut and sampled at the Mt Gibson core yard. Sample intervals were 1.0m for the HQ sized diamond core. Samples were collected in pre numbered Calico and grouped for dispatch to ALS laboratory for FA50AAS and 4 acid digest multielement ME-MS61. No field duplicates were sampled for the DD, and CRMS and OREAS certified reference material (CRM) were inserted at a ratio of 2:25.</p>
<p><b>Quality of assay data and laboratory tests</b></p>	<ul style="list-style-type: none"> <li>• <i>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</i></li> <li>• <i>For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</i></li> <li>• <i>Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.</i></li> </ul>	<p>RC: Drilling samples were submitted to MinAnalytical laboratory and ALS in Perth. 1m RC samples were assayed by a FA50AAS 50gm fire assay which is a total assay. 11,771 samples were prepared and processed in Perth ALS and MinAnalytical with a 50g pulp sent to the accredited ALS/Minanalytical laboratory in Vientiane in Laos for FA50AAS 50gm fire assay analysis. This represents 25% of the total programme.</p> <p>RC Field duplicates were collected at a ratio of 1:40 and collected at the same time as the original sample through the B chute of the cone splitter. Matrix matched CRMS and OREAS certified reference material (CRM) were inserted at a ratio of 1:40. The grade ranges of the CRM's were selected based on grade populations and economic grade ranges.</p> <p>DD: Drilling samples were submitted to Minanalytical laboratory and ALS in Perth. 1m RC samples were assayed by a FA50AAS 50gm fire assay which is a total assay. No field duplicates were sampled for the DD, and CRMS and OREAS certified reference material (CRM) were inserted at a ratio of 2:25. The grade ranges of the CRM's were selected based on grade populations and economic grade</p>

Criteria	JORC Code explanation	Commentary
		ranges.
<b>Verification of sampling and assaying</b>	<ul style="list-style-type: none"> <li>The verification of significant intersections by either independent or alternative company personnel.</li> <li>The use of twinned holes.</li> <li>Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</li> <li>Discuss any adjustment to assay data.</li> </ul>	<p>Logging and sampling were recorded directly into a Micromine Geobank template, which utilises lookup tables and in file validation on a Toughbook by the geologist on the rig. Validated data was sent to the database administrator in Perth who then carried out independent verifications using Maxwell's Datashed.</p> <p>Assay results when received were plotted on section and were verified against neighbouring holes.</p> <p>QAQC reports were generated on a hole-by-hole basis by the database administrator as results were received.</p>
<b>Location of data points</b>	<ul style="list-style-type: none"> <li>Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</li> <li>Specification of the grid system used.</li> <li>Quality and adequacy of topographic control.</li> </ul>	<p>All Drillhole collar positions were surveyed using hand held GPS. Drillhole location data was initially captured in the MGA94 grid system. Before further resource evaluation work the drillhole locations will be picked up with DGPS by qualified surveyors.</p> <p>Down hole surveys were undertaken on 30m increments from end of hole, using a Reflex down hole gyroscopic tool.</p> <p>The natural surface topography was modelled using a DTM generated from airborne survey, this includes waste dumps and some in-pit waste dumping. The DTM was rotated in-house to the local grid coordinate system. Also available are pit surveys of the mining voids at the end of historical mining to enable depletion of the CMM resource. The pit surveys and topography surface were checked in Google Earth for accuracy. Horizontal point accuracy is expected to be &lt;5m and vertical accuracy to 0.5m. The reference datum was GDA94 and the projection was MGA Zone 50. Topographic control appears to be of good quality and is considered adequate for resource estimation.</p>
<b>Data spacing and distribution</b>	<ul style="list-style-type: none"> <li>Data spacing for reporting of Exploration Results.</li> <li>Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</li> <li>Whether sample compositing has been applied.</li> </ul>	<p>RC and DD Samples were collected and analysed for each metre down the hole. Samples were collected and analysed for each metre down the hole.</p> <p>RC hole spacing was between 50m N x 50m E and 25m N x 25m E, sufficient for resource estimation.</p> <p>DD holes were spaced across the project area with locations picked for geotechnical or metallurgical purposes.</p>
<b>Orientation of data in relation to geological structure</b>	<ul style="list-style-type: none"> <li>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</li> <li>If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.</li> </ul>	<p>Drill lines are oriented across strike on an MGA grid. MGGP orebody dips at 80 degrees to the East and KGP 25 degrees to the west.</p> <p>Holes in the drill Programmes have been mostly drilled at inclination of -55 to -60 degrees at MGGP and KGP. The orientation of the drilling is suitable for the mineralisation style and orientation of the target mineralisation.</p>
<b>Sample security</b>	<ul style="list-style-type: none"> <li>The measures taken to ensure sample security.</li> </ul>	<p>Calico sample bags are sealed into green bags/polyweave bags and cable tied. These bags were then sealed in bulka bags by company personnel and dispatched by third party contractor. In-company reconciliation is completed with laboratory assay returns.</p>
<b>Audits or reviews</b>	<ul style="list-style-type: none"> <li>The results of any audits or reviews of sampling techniques and data.</li> </ul>	<p>The Competent Person for Exploration Results reported here has visited the project areas where sampling has taken place and has reviewed and confirmed the sampling procedures.</p>

## Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
<b>Mineral tenement and land tenure status</b>	<ul style="list-style-type: none"> <li>Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</li> <li>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</li> </ul>	<p>MGGP: The resource is located across mining tenements held by wholly owned Capricorn subsidiaries METROVEX PTY LTD and CRIMSON METALS PTY LTD: being M 59/772, E 59/2450, E 59/2594, E 59/2606, G 59/11, G 59/12, G 59/13, G 59/14, G 59/15, G 59/16, G 59/17, G 59/18, G 59/48, G 59/70, L 59/140, L 59/45, L 59/46, L 59/53, M 59/328, M 59/402, M 59/403, M 59/404, P 59/2286, P 59/2287, P 59/2290, P 59/2291, P 59/2306, P 59/2309, P 59/2310.</p> <p>All of the tenements are subject to a 1% NSR royalty to Avenger Projects Ltd, including gold production above 90,000 ounces. A royalty is also payable to St Barbara Limited on all gold production in excess of 20,000 ounces (excluding production from historic waste dumps and tailings) at the rate of \$10 per ounce, applicable to leases M 59/328, M 59/402, M 59/403, M 59/404, G 59/11, G 59/12, G 59/13, G 59/14, G 59/15, G 59/16, G 59/17, G 59/18, L 59/45, L 59/46, L 59/53 No other known impediments exist to operate in the area.</p> <p>KGP: The Bibra deposit is located in M 52/1070 held by Greenmount Resources, a wholly owned subsidiary of Capricorn Metals.</p> <p>M52/1070 is within the area of granted E52/1711 exploration tenement in the Pilbara region of Western Australia. E52/1711 was acquired from BHPB in 2008. South32 (via the spin-out from BHPB) retain a 2% NSR whilst BHPB a claw-back provision whereby BHPB can elect to acquire a 70% equity in the project only if JORC compliant reported resources of 5,000,000 ounces of gold and/or 120,000 tonnes of contained nickel have been delineated. The Nyiyaparli People hold Native Title over the area including E52/1711 and M52/1070. There is no known heritage or environmental impediments over the lease.</p> <p>No other known impediments exist to operate in the area.</p>
<b>Exploration done by other parties</b>	<ul style="list-style-type: none"> <li>Acknowledgment and appraisal of exploration by other parties.</li> </ul>	<p>MGGP: The Mt Gibson Gold Deposit (Mt Gibson) has a history of minor gold production dating back to the 1930's when prospectors operated small gold workings at Paynes-Crusoe and Tobias Find. While the area was subject to previous prospecting and company exploration in smaller leaseholdings, the Mt. Gibson Gold Project was first held in more-or-less its present configuration and extent by Reynolds Australia, who commenced exploration in the early 1980's. Soil and laterite sampling resulted in several significant gold and base metal anomalies being defined; follow up rotary air blast (RAB), air core (AC), reverse circulation (RC) and diamond drilling Programmes outlined significant economic laterite and oxide resources. A joint venture between Reynolds Australia Metals and Forsayth Mining Limited (with FML as the operator) began operations in 1986, mining and processing 6.5 million tonnes of laterite ores defined by FML in 1984, followed later by oxide and sulphide ores defined by drilling beneath the laterite orebodies. The project was sold by Reynolds to Camelot Resources in 1995. Continuing exploration resulted in the discovery of further oxide resources, mainly on the Taurus Trend, and the underground quartz-sulphide deposit at Wombat. These resources were subsequently mined and processed, all mining being completed at the end of 1997 and final milling of low grade stockpiles completed in June of 1998. A 4Mt dump leach remained in operation until November 1998, producing 68,868 ounces of gold. Including the dump leach, a total of 16,477,882</p>

Criteria	JORC Code explanation	Commentary
		<p>tonnes of ore was processed during the life of the operation, for 868,478 ounces of gold at an overall average grade of 1.64g/t Au.</p> <p>KGP: Prior to Capricorn Metals, E52/1711 was held by Independence group (IGO) who undertook exploration between 2008 &amp; 2014. Prior to Independence group, WMC (BHPB) explored the area from 2004 to 2008.</p>
<p><b>Geology</b></p>	<ul style="list-style-type: none"> <li><i>Deposit type, geological setting and style of mineralisation.</i></li> </ul>	<p><b>MGGP:</b> The Mt Gibson Gold Project tenements are located at the southern extremity of the Retaliation Greenstone Belt, in the SW portion of the Yalgoo-Singleton Greenstone Belt in the Murchison Province of the Yilgarn Craton. The tenements are mostly covered by a veneer of alluvial quartz sands and laterite gravels, with sporadic greenstone subcrop and outcrop, increasingly exposed in the north of the project area. The mineralised laterite gravels are situated slightly down-slope from the lode deposits on the Gibson trend. Regionally, the greenstone belt has been metamorphosed to middle amphibolite facies and hosts a number of Au-Cu deposits and prospects, including Golden Grove, 90km to the northwest of Mt.Gibson.</p> <p>The lode style mineralisation at Mt. Gibson is predominantly hosted by three main trends:</p> <p><b>The Gibson Trend</b></p> <p>The majority of the known and mined mineralisation is hosted by this trend. It is hypothesised to have originally been a gold-copper-zinc rich Volcanogenic Hosted Massive Sulphide (VHMS) deposit that has been overprinted by a later hydrothermal gold mineralising event. This mineralised shear zone has an arcuate north-south to northeasterly strike (trending more north-easterly in the north) and extends for more than seven kilometres from the southern granite contact to beyond the Hornet ore body.</p> <p>The so-called “Mine Sequence” is around 400 metres wide and consists of a parcel of sheared, metamorphosed and chlorite-biotite-muscovite altered mafic volcanics. Numerous felsic porphyries intrude the Mine Sequence. Mineralisation is hosted within multiple sets of elongate lodes with strong strike continuity, which anastomose and pinch-swell along strike and to depth. The main lode systems include Hornet, Enterprise, Orion and S2.</p> <p><b>The Taurus Trend</b></p> <p>The north-westerly trending Taurus Trend lies west of and diagonal to the Gibson Trend. Mineralisation is intimately associated with an apparently continuous felsic unit emplaced into the northwest trending shear and was discovered late in the life of the mining operation. It is characterised by discontinuous ore bodies, and strongly mineralised quartz-sulphide veining. The ore bodies on this trend include Sheldon and Wombat which, although not as continuous in strike as the ore bodies on the Gibson Trend, show a higher gold tenor.</p> <p><b>The Highway Trend</b></p> <p>The Highway Trend is a northeast trending shear zone, hosted by a mafic sequence in the western terrain, 11km northwest of the main mining area. This trend hosts the Highway ore body, and the Phoenix and Aquarius Prospects. It shares many of the characteristics of the Gibson trend, but it appears to lack the VHMS mineralising event and has generally been regarded as a predominantly low-grade system, although work from previous explores suggest it may have greater persistence and significance than previously thought and hence justifies further attention. The project area also hosts</p>

Criteria	JORC Code explanation	Commentary
		a number of BIF and quartz hosted small mineral occurrences including Paynes-Crusoe and MacDonald's Find.  <b>KGP:</b> Bibra is part of a large-scale Archaean aged gold mineralised system. The resource is hosted within a package of deformed meta-sediments which has developed on at least two parallel, shallow dipping structures; Laterite oxide mineralization has developed over the structures close to surface. The primary mineralisation is strata-bound with lineations identified as controlling higher-grade shoots. The deposit is oxidized to average depths of 50-70m.
<b>Drill hole Information</b>	<ul style="list-style-type: none"> <li>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes: <ul style="list-style-type: none"> <li>easting and northing of the drill hole collar</li> <li>elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</li> <li>dip and azimuth of the hole</li> <li>down hole length and interception depth</li> <li>hole length.</li> </ul> </li> <li>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</li> </ul>	All relevant drillhole information can be found in section 1 – “Sampling techniques”, “Drilling techniques” and “Drill Sample Recovery” and the significant intercepts table.
<b>Data aggregation methods</b>	<ul style="list-style-type: none"> <li>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</li> <li>Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</li> <li>The assumptions used for any reporting of metal equivalent values should be clearly stated.</li> </ul>	Reported intercepts include a minimum of 0.5g/t Au value over a minimum length of 1m with a maximum 2m length of consecutive internal waste. No upper cuts have been applied. No aggregation methods have been applied for the rockchips. No metal equivalent values are used.
<b>Relationship between mineralisation widths and intercept lengths</b>	<ul style="list-style-type: none"> <li>These relationships are particularly important in the reporting of Exploration Results.</li> <li>If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</li> <li>If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg ‘down hole length, true width not known’).</li> </ul>	<b>MGGP:</b> The mineralisation dips steeply to the east, and drilling is generally orientated at 60 degrees to the west, meaning intercepts are roughly perpendicular to mineralisation in the majority of cases. Some vertical holes drilled from the base of mined pits and are therefore at a high degree to the mineralisation.  <b>KGP:</b> At Bibra, the geometry of the mineralisation has already been defined from previous drilling programs. The intersection angle between drill angle and the perpendicular angle to the ore zone is less than 10 degrees.
<b>Diagrams</b>	<ul style="list-style-type: none"> <li>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</li> </ul>	Refer to the diagrams in the body of this report.
<b>Balanced reporting</b>	<ul style="list-style-type: none"> <li>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.</li> </ul>	The accompanying document is considered to be a balanced report with a suitable cautionary note.
<b>Other substantive exploration data</b>	<ul style="list-style-type: none"> <li>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</li> </ul>	No other material information or data to report.

Criteria	JORC Code explanation	Commentary
<b>Further work</b>	<ul style="list-style-type: none"> <li>The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).</li> <li>Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</li> </ul>	Further work includes continued resource infill RC drilling at both projects, and studies on the diamond drilling at MGGP for metallurgical studies, QAQC assessment, geotechnical and bulk density testwork. This work will form the basis of an updated resource and maiden Ore Reserve at Mt Gibson.

### Section 3 Estimation and Reporting of Mineral Resources

(Criteria listed in section 1, and where relevant in section 2, also apply to this section.)

Criteria	JORC Code explanation	Commentary
<b>Database integrity</b>	<ul style="list-style-type: none"> <li>Measures taken to ensure that data has not been corrupted by, for example, transcription or keying errors, between its initial collection and its use for Mineral Resource estimation purposes.</li> <li>Data validation procedures used.</li> </ul>	No Mineral Resource Estimation update being reported.
<b>Site visits</b>	<ul style="list-style-type: none"> <li>Comment on any site visits undertaken by the Competent Person and the outcome of those visits.</li> <li>If no site visits have been undertaken indicate why this is the case.</li> </ul>	No Mineral Resource Estimation update being reported.
<b>Geological interpretation</b>	<ul style="list-style-type: none"> <li>Confidence in (or conversely, the uncertainty of) the geological interpretation of the mineral deposit.</li> <li>Nature of the data used and of any assumptions made.</li> <li>The effect, if any, of alternative interpretations on Mineral Resource estimation.</li> <li>The use of geology in guiding and controlling Mineral Resource estimation.</li> <li>The factors affecting continuity both of grade and geology.</li> </ul>	No Mineral Resource Estimation update being reported.
<b>Dimensions</b>	<ul style="list-style-type: none"> <li>The extent and variability of the Mineral Resource expressed as length (along strike or otherwise), plan width, and depth below surface to the upper and lower limits of the Mineral Resource.</li> </ul>	No Mineral Resource Estimation update being reported.
<b>Estimation and modelling techniques</b>	<ul style="list-style-type: none"> <li>The nature and appropriateness of the estimation technique(s) applied and key assumptions, including treatment of extreme grade values, domaining, interpolation parameters and maximum distance of extrapolation from data points. If a computer assisted estimation method was chosen include a description of computer software and parameters used.</li> <li>The availability of check estimates, previous estimates and/or mine production records and whether the Mineral Resource estimate takes appropriate account of such data.</li> <li>The assumptions made regarding recovery of by-products.</li> <li>Estimation of deleterious elements or other non-grade variables of economic significance (eg sulphur for acid mine drainage characterisation).</li> <li>In the case of block model interpolation, the block size in relation to the average sample spacing and the search employed.</li> <li>Any assumptions behind modelling of selective mining units.</li> <li>Any assumptions about correlation between variables.</li> <li>Description of how the geological interpretation was used to control the resource estimates.</li> <li>Discussion of basis for using or not using grade cutting or capping.</li> <li>The process of validation, the checking process used, the comparison of model data to drill hole data, and use of reconciliation data if available.</li> </ul>	No Mineral Resource Estimation update being reported.
<b>Moisture</b>	<ul style="list-style-type: none"> <li>Whether the tonnages are estimated on a dry basis or with natural moisture, and the method of determination of the moisture content.</li> </ul>	No Mineral Resource Estimation update being reported.

Criteria	JORC Code explanation	Commentary
<b>Cut-off parameters</b>	<ul style="list-style-type: none"> <li>The basis of the adopted cut-off grade(s) or quality parameters applied.</li> </ul>	No Mineral Resource Estimation update being reported.
<b>Mining factors or assumptions</b>	<ul style="list-style-type: none"> <li>Assumptions made regarding possible mining methods, minimum mining dimensions and internal (or, if applicable, external) mining dilution. It is always necessary as part of the process of determining reasonable prospects for eventual economic extraction to consider potential mining methods, but the assumptions made regarding mining methods and parameters when estimating Mineral Resources may not always be rigorous. Where this is the case, this should be reported with an explanation of the basis of the mining assumptions made.</li> </ul>	No Mineral Resource Estimation update being reported.
<b>Metallurgical factors or assumptions</b>	<ul style="list-style-type: none"> <li>The basis for assumptions or predictions regarding metallurgical amenability. It is always necessary as part of the process of determining reasonable prospects for eventual economic extraction to consider potential metallurgical methods, but the assumptions regarding metallurgical treatment processes and parameters made when reporting Mineral Resources may not always be rigorous. Where this is the case, this should be reported with an explanation of the basis of the metallurgical assumptions made.</li> </ul>	No Mineral Resource Estimation update being reported.
<b>Environmental factors or assumptions</b>	<ul style="list-style-type: none"> <li>Assumptions made regarding possible waste and process residue disposal options. It is always necessary as part of the process of determining reasonable prospects for eventual economic extraction to consider the potential environmental impacts of the mining and processing operation. While at this stage the determination of potential environmental impacts, particularly for a greenfields project, may not always be well advanced, the status of early consideration of these potential environmental impacts should be reported. Where these aspects have not been considered this should be reported with an explanation of the environmental assumptions made.</li> </ul>	No Mineral Resource Estimation update being reported.
<b>Bulk density</b>	<ul style="list-style-type: none"> <li>Whether assumed or determined. If assumed, the basis for the assumptions. If determined, the method used, whether wet or dry, the frequency of the measurements, the nature, size and representativeness of the samples.</li> <li>The bulk density for bulk material must have been measured by methods that adequately account for void spaces (vugs, porosity, etc), moisture and differences between rock and alteration zones within the deposit.</li> <li>Discuss assumptions for bulk density estimates used in the evaluation process of the different materials.</li> </ul>	No Mineral Resource Estimation update being reported.
<b>Classification</b>	<ul style="list-style-type: none"> <li>The basis for the classification of the Mineral Resources into varying confidence categories.</li> <li>Whether appropriate account has been taken of all relevant factors (ie relative confidence in tonnage/grade estimations, reliability of input data, confidence in continuity of geology and metal values, quality, quantity and distribution of the data).</li> <li>Whether the result appropriately reflects the Competent Person's view of the deposit.</li> </ul>	No Mineral Resource Estimation update being reported.
<b>Audits or reviews</b>	<ul style="list-style-type: none"> <li>The results of any audits or reviews of Mineral Resource estimates.</li> </ul>	No Mineral Resource Estimation update being reported.
<b>Discussion of relative accuracy/confidence</b>	<ul style="list-style-type: none"> <li>Where appropriate a statement of the relative accuracy and confidence level in the Mineral Resource estimate using an approach or procedure deemed appropriate by the Competent Person. For example, the application of statistical or geostatistical procedures to quantify the relative accuracy of the resource within stated confidence limits, or, if such an approach is not deemed appropriate, a qualitative discussion of the factors that could affect the relative accuracy and confidence of the estimate.</li> <li>The statement should specify whether it relates to global or local estimates, and, if local, state the relevant tonnages, which should be relevant to technical and economic evaluation.</li> </ul>	No Mineral Resource Estimation update being reported.

Criteria	JORC Code explanation	Commentary
	<p>Documentation should include assumptions made and the procedures used.</p> <ul style="list-style-type: none"> <li>• These statements of relative accuracy and confidence of the estimate should be compared with production data, where available.</li> </ul>	

## Section 4 Estimation and Reporting of Ore Reserves

(Criteria listed in section 1, and where relevant in sections 2 and 3, also apply to this section.)

Criteria	JORC Code explanation	Commentary
<b>Mineral Resource estimate for conversion to Ore Reserves</b>	<ul style="list-style-type: none"> <li>• Description of the Mineral Resource estimate used as a basis for the conversion to an Ore Reserve.</li> <li>• Clear statement as to whether the Mineral Resources are reported additional to, or inclusive of, the Ore Reserves.</li> </ul>	No Ore Reserve being reported.
<b>Site visits</b>	<ul style="list-style-type: none"> <li>• Comment on any site visits undertaken by the Competent Person and the outcome of those visits.</li> <li>• If no site visits have been undertaken indicate why this is the case.</li> </ul>	No Ore Reserve being reported.
<b>Study status</b>	<ul style="list-style-type: none"> <li>• The type and level of study undertaken to enable Mineral Resources to be converted to Ore Reserves.</li> <li>• The Code requires that a study to at least Pre-Feasibility Study level has been undertaken to convert Mineral Resources to Ore Reserves. Such studies will have been carried out and will have determined a mine plan that is technically achievable and economically viable, and that material Modifying Factors have been considered.</li> </ul>	No Ore Reserve being reported.
<b>Cut-off parameters</b>	<ul style="list-style-type: none"> <li>• The basis of the cut-off grade(s) or quality parameters applied.</li> </ul>	No Ore Reserve being reported.
<b>Mining factors or assumptions</b>	<ul style="list-style-type: none"> <li>• The method and assumptions used as reported in the Pre-Feasibility or Feasibility Study to convert the Mineral Resource to an Ore Reserve (i.e. either by application of appropriate factors by optimisation or by preliminary or detailed design).</li> <li>• The choice, nature and appropriateness of the selected mining method(s) and other mining parameters including associated design issues such as pre-strip, access, etc.</li> <li>• The assumptions made regarding geotechnical parameters (eg pit slopes, stope sizes, etc), grade control and pre-production drilling.</li> <li>• The major assumptions made and Mineral Resource model used for pit and stope optimisation (if appropriate).</li> <li>• The mining dilution factors used.</li> <li>• The mining recovery factors used.</li> <li>• Any minimum mining widths used.</li> <li>• The manner in which Inferred Mineral Resources are utilised in mining studies and the sensitivity of the outcome to their inclusion.</li> <li>• The infrastructure requirements of the selected mining methods.</li> </ul>	No Ore Reserve being reported.
<b>Metallurgical factors or assumptions</b>	<ul style="list-style-type: none"> <li>• The metallurgical process proposed and the appropriateness of that process to the style of mineralisation.</li> <li>• Whether the metallurgical process is well-tested technology or novel in nature.</li> <li>• The nature, amount and representativeness of metallurgical test work undertaken, the nature of the metallurgical domaining applied and the corresponding metallurgical recovery factors</li> </ul>	No Ore Reserve being reported.

Criteria	JORC Code explanation	Commentary
	<p><i>applied.</i></p> <ul style="list-style-type: none"> <li>Any assumptions or allowances made for deleterious elements.</li> <li>The existence of any bulk sample or pilot scale test work and the degree to which such samples are considered representative of the orebody as a whole.</li> <li>For minerals that are defined by a specification, has the ore reserve estimation been based on the appropriate mineralogy to meet the specifications?</li> </ul>	
<b>Environmental</b>	<ul style="list-style-type: none"> <li>The status of studies of potential environmental impacts of the mining and processing operation. Details of waste rock characterisation and the consideration of potential sites, status of design options considered and, where applicable, the status of approvals for process residue storage and waste dumps should be reported.</li> </ul>	No Ore Reserve being reported.
<b>Infrastructure</b>	<ul style="list-style-type: none"> <li>The existence of appropriate infrastructure: availability of land for plant development, power, water, transportation (particularly for bulk commodities), labour, accommodation; or the ease with which the infrastructure can be provided, or accessed.</li> </ul>	No Ore Reserve being reported.
<b>Costs</b>	<ul style="list-style-type: none"> <li>The derivation of, or assumptions made, regarding projected capital costs in the study.</li> <li>The methodology used to estimate operating costs.</li> <li>Allowances made for the content of deleterious elements.</li> <li>The derivation of assumptions made of metal or commodity price(s), for the principal minerals and co-products.</li> <li>The source of exchange rates used in the study.</li> <li>Derivation of transportation charges.</li> <li>The basis for forecasting or source of treatment and refining charges, penalties for failure to meet specification, etc.</li> <li>The allowances made for royalties payable, both Government and private.</li> </ul>	No Ore Reserve being reported.
<b>Revenue factors</b>	<ul style="list-style-type: none"> <li>The derivation of, or assumptions made regarding revenue factors including head grade, metal or commodity price(s) exchange rates, transportation and treatment charges, penalties, net smelter returns, etc.</li> <li>The derivation of assumptions made of metal or commodity price(s), for the principal metals, minerals and co-products.</li> </ul>	No Ore Reserve being reported.
<b>Market assessment</b>	<ul style="list-style-type: none"> <li>The demand, supply and stock situation for the particular commodity, consumption trends and factors likely to affect supply and demand into the future.</li> <li>A customer and competitor analysis along with the identification of likely market windows for the product.</li> <li>Price and volume forecasts and the basis for these forecasts.</li> <li>For industrial minerals the customer specification, testing and acceptance requirements prior to a supply contract.</li> </ul>	No Ore Reserve being reported.
<b>Economic</b>	<ul style="list-style-type: none"> <li>The inputs to the economic analysis to produce the net present value (NPV) in the study, the source and confidence of these economic inputs including estimated inflation, discount rate, etc.</li> <li>NPV ranges and sensitivity to variations in the significant assumptions and inputs.</li> </ul>	No Ore Reserve being reported.
<b>Social</b>	<ul style="list-style-type: none"> <li>The status of agreements with key stakeholders and matters leading to social licence to operate.</li> </ul>	No Ore Reserve being reported.
<b>Other</b>	<ul style="list-style-type: none"> <li>To the extent relevant, the impact of the following on the project and/or on the estimation and classification of the Ore Reserves:</li> <li>Any identified material naturally occurring risks.</li> </ul>	No Ore Reserve being reported.

Criteria	JORC Code explanation	Commentary
	<ul style="list-style-type: none"> <li>The status of material legal agreements and marketing arrangements.</li> <li>The status of governmental agreements and approvals critical to the viability of the project, such as mineral tenement status, and government and statutory approvals. There must be reasonable grounds to expect that all necessary government approvals will be received within the timeframes anticipated in the Pre-Feasibility or Feasibility study. Highlight and discuss the materiality of any unresolved matter that is dependent on a third party on which extraction of the reserve is contingent.</li> </ul>	
<b>Classification</b>	<ul style="list-style-type: none"> <li>The basis for the classification of the Ore Reserves into varying confidence categories.</li> <li>Whether the result appropriately reflects the Competent Person's view of the deposit.</li> <li>The proportion of Probable Ore Reserves that have been derived from Measured Mineral Resources (if any).</li> </ul>	No Ore Reserve being reported.
<b>Audits or reviews</b>	<ul style="list-style-type: none"> <li>The results of any audits or reviews of Ore Reserve estimates.</li> </ul>	No Ore Reserve being reported.
<b>Discussion of relative accuracy/confidence</b>	<ul style="list-style-type: none"> <li>Where appropriate a statement of the relative accuracy and confidence level in the Ore Reserve estimate using an approach or procedure deemed appropriate by the Competent Person. For example, the application of statistical or geostatistical procedures to quantify the relative accuracy of the reserve within stated confidence limits, or, if such an approach is not deemed appropriate, a qualitative discussion of the factors which could affect the relative accuracy and confidence of the estimate.</li> <li>The statement should specify whether it relates to global or local estimates, and, if local, state the relevant tonnages, which should be relevant to technical and economic evaluation. Documentation should include assumptions made and the procedures used.</li> <li>Accuracy and confidence discussions should extend to specific discussions of any applied Modifying Factors that may have a material impact on Ore Reserve viability, or for which there are remaining areas of uncertainty at the current study stage.</li> <li>It is recognised that this may not be possible or appropriate in all circumstances. These statements of relative accuracy and confidence of the estimate should be compared with production data, where available.</li> </ul>	No Ore Reserve being reported.
