

AUSTRALASIAN METALS

ASX Announcement | ASX: A8G | 10 August 2022

Drilling results extend mineralisation along strike at Mt Clermont, Central Queensland

Highlights

- The Company's maiden drilling campaign has verified historical intersections of gold mineralisation at the Retro Extended Prospect at Mt Clermont
- Highlights included:
 - **RERC036:** 3m at 1.12 g/t Au from 61m;
 - **RERC037:** 16m at 1.38 g/t Au from 18m depth; and
 - **RERC044:** 11m at 1.61 g/t Au from 128m, including 5m at 3.40 g/t from 128m.
- Recent field investigation mapped an extension of the Retro Extended veining for approximately 400 metres south of the most southern drillhole at the prospect
- Gold-in-rock samples highlight untested potential at the Retro and Retro Extended prospects:
 - High grade historic drill intercepts at Retro Extended include: 8m at 16.1 g/t Au, 143 g/t Ag, 5.6% Cu, 7.8% Pb from 8m in hole RERC001.
 - Narrow high-grade historic drill intercept from diamond drilling in 2018 of 0.7m at 10.9 g/t Au, 146 g/t Ag, 8.3% Zn, 5.1% Pb and 0.7% Cu from 229.5m in hole RTIPT016.

Australasian Metals Limited (**ASX: A8G, Australasian** or the **Company**) is pleased to advise that its maiden drill program at the Mt Clermont polymetallic project has been completed with promising gold results returned. Twelve drill holes were drilled for 1,272 metres to test and verify historical drilling (70 holes for ~6,500 metres) in an area the Company believes has the potential to define a maiden resource (Table 1). The aim of the recent drilling was designed to test these targets for potential extensions of mineralisation, as well as improve the confidence to produce a JORC compliant resource estimation.

AUSTRALASIAN METALS

ASX Announcement | ASX: A8G | 10 August 2022

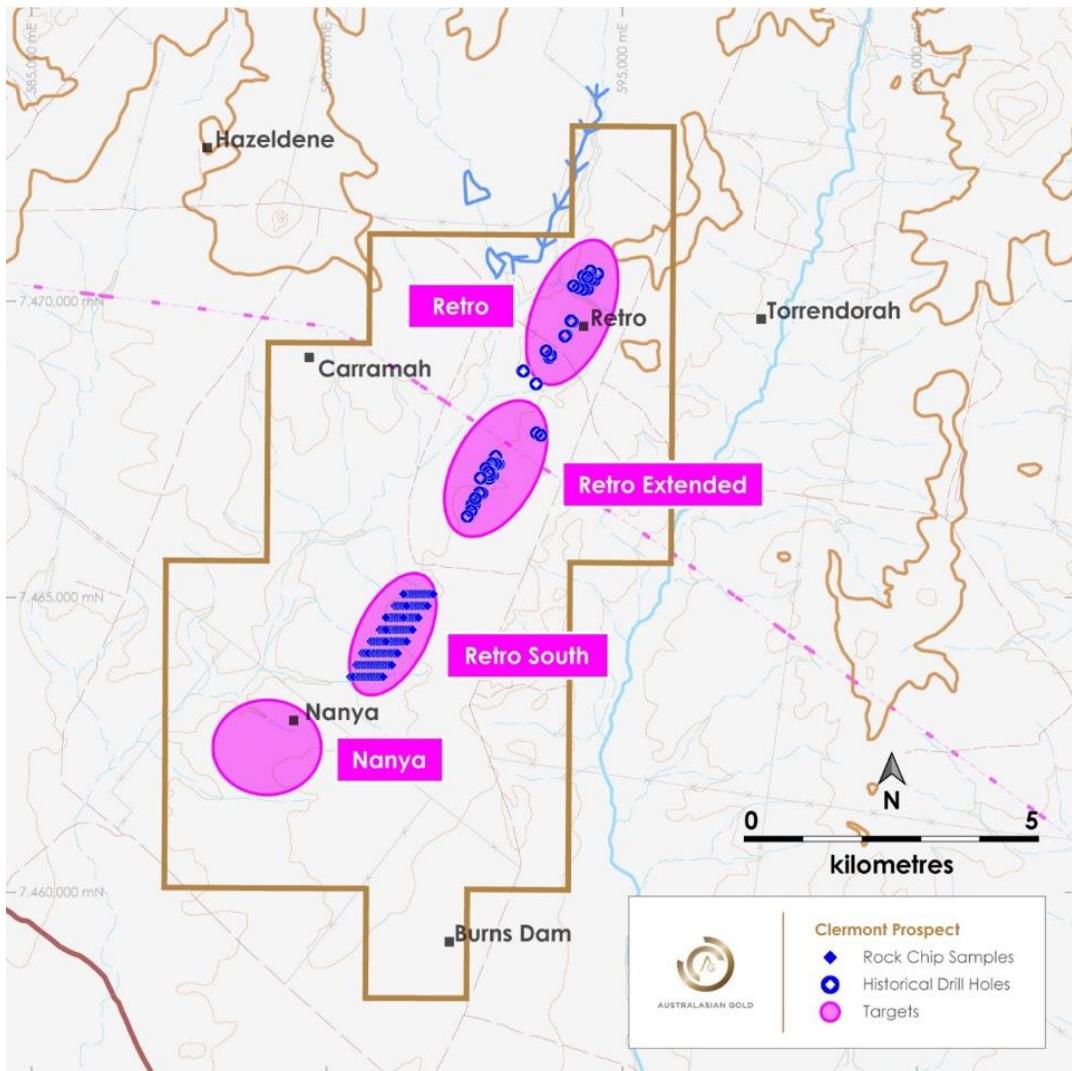

Figure 1: Mt Clermont Prospect locations

Managing Director Dr Qingtao Zeng said:

"Our 2022 drilling program has successfully verified the historical data, but most importantly, several exploration holes show the potential to grow the current defined mineralisation further, which is very exciting".

Mt Clermont polymetallic project

Mt Clermont hosts the regionally significant Retro, Retro Extended and Nanya prospects, which are associated with the Retro Fault Zone (Figure 1). The project lies within the Anakie Province of the Drummond Basin, which is composed of a sequence of Devonian to Carboniferous sediments in Central Queensland, approximately 60km by road north-west of

AUSTRALASIAN METALS

ASX Announcement | ASX: A8G | 10 August 2022

the town of Emerald. Mt Clermont has over 6,500m of historical drilling, showing potential for a high-grade polymetallic epithermal system.

The 2022 drilling is shown on the following maps together with a selection of cross sections (Figure 2, 3 and 4). The drill holes were designed to target and extend the mineralisation trend southwards and to test the interpretation that the vein system mapped has not been intersected previously. Some drilling was to validate and infill previous drilling where significant mineralisation has been identified.

Table 1: Drilling location and details of A8G RC program in 2022

Hole ID	East	North	RL	Depth(m)	Dip	Azimuth

Retro Extended Prospect

The recent field investigation and data re-interpretation conducted by the Company has identified several targets with open potential for further mineralisation.

The Company's geological team located and mapped the Retro Extended vein for at least 400 metres south of the most southern drillhole with gold mineralisation. It appears that a number of the historical drill holes did not intersect the down dip extension of this vein which may be a parallel structure to the vein that was intersected in historical drilling.

Upcoming Work

With this verification work completed the Company will begin a data review and modelling the orebody for grade interpolation. More exploration activities will be planned for the southwest end of the current known mineralisation.

This announcement is approved for release by the Board of Directors.

Competent Person Statement

The information in this report that relates to Exploration Results is based on, and fairly represents, information and supporting documentation prepared by Ian Cooper, a consultant geologist of Australasian Metals Limited. Mr Cooper is a Fellow of the Australasian Institute of Mining and Metallurgy and he has sufficient experience which is relevant to the style of mineralisation and type of deposits under consideration and to the activity which has been undertaken to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Cooper consents to the inclusion in this release of the matters based on the information in the form and context in which they appear.

AUSTRALASIAN METALS

ASX Announcement | ASX: A8G | 10 August 2022

Historic data by Impact Minerals and previously reported and current program compliant with the JORC Code (2012).

Section 1 Sampling Techniques and Data

Criteria	Commentary
<i>Sampling techniques</i>	<ul style="list-style-type: none">• RC Drilling Reverse Circulation (RC) percussion drilling was used to produce a 1m bulk sample (~25kg) which was collected in plastic bags. 1m split samples (nominally 3kg) were collected using a riffle splitter and placed in a calico bag. The cyclone was cleaned out with compressed air at the end of each hole and periodically during the drilling. Holes were drilled to optimally intercept interpreted mineralised zones. All anomalous zones were assayed using the 1 m split samples.• During recent RC drilling program, our consultant geologist Ian Cooper supervised the entire program. Samples were under supervision of the geologist until submitted to the laboratory. Samples were submitted to the ALS laboratory located in Brisbane Australia with sample preparation method as per the following laboratory code: WEI-21, LEV-01, LOG-22,-24, PUL-23, BAG-01,-21, SPL-21 and PUL-QC. And analysis for gold by the following methods (Laboratory codes) Au-AA26_Au 50g AA finish_AAS.• Drill Samples Sample representivity was ensured by a combination of quality control (QC) and quality assurance/testing (QA) procedures including daily workplace and equipment inspections, drilling and sampling procedures collection of “field duplicates”, the use of certified standards and blank samples approximately every 50 samples.
<i>Drilling techniques</i>	<ul style="list-style-type: none">• RC drilling using 5-inch face sampling hammer.• Conducted by Eagle Drilling NQ Pty Ltd.
<i>Drill sample recovery</i>	<ul style="list-style-type: none">• RC drilling The RC samples were collected by plastic bag directly from the rig-mounted cyclone and laid directly on the ground in rows of 10. The drill cyclone and sample buckets are cleaned between rod-changes and after each hole to minimise down-hole and/or cross contamination. Samples were visually checked for recovery, moisture and contamination.• No sample bias has been established.
<i>Logging</i>	<ul style="list-style-type: none">• Geological logging of samples followed company and industry common practice for all drill holes. Qualitative logging of samples included (but not limited to): lithology, mineralogy, alteration, veining and weathering. Diamond core logging includes additional fields such as structure and geotechnical parameters.• Magnetic Susceptibility measurements were taken by Invictus Gold for each 1m RC sample.• All logging was quantitative, based on visual field estimates. Chip trays with representative 1m RC samples were collected and photographed then stored for future reference.

AUSTRALASIAN METALS

ASX Announcement | ASX: A8G | 10 August 2022

Criteria	Commentary
<i>Sub-sampling techniques and sample preparation</i>	<ul style="list-style-type: none">RC samples were split using a riffle splitter.Company procedures were followed to ensure sub-sampling adequacy and consistency.Laboratory QC procedures for rock sample assays involve the use of internal certified reference material as assay standards, along with blanks, duplicates and replicates. Impact used field duplicates and standards for every 1 in 50 samples and blanks every 1 in 100 samples.All QA/QC results were reported by Impact as being within acceptable levels of +/- 15-20%.The samples sizes at Capella are considered appropriate for reporting Exploration Results.
<i>Quality of assay data and laboratory tests</i>	<ul style="list-style-type: none">RC drill samples Industry standard fire assay and 4 acid digest analytical techniques were used. Both techniques are considered to be almost a total digest apart from certain refractory minerals not relevant to exploration at Capella.Drill Assay Data Field duplicates: 1 in every 20 samples. Standards 1 in 20 samples. Blanks 1 in 100 samples. In addition, standards, duplicates and blanks were inserted by the analytical laboratory at industry standard intervals.
<i>Verification of sampling and assaying</i>	<ul style="list-style-type: none">The Current RC drilling program is aiming at verifying historic drilling.All historical drill data had been entered by Impact and verified internally against the original reports.No significant adjustments to the assay data have been required.
<i>Location of data points</i>	<ul style="list-style-type: none">The RC drill holes have been reported in Mt Clermont as being located by hand-held GPS.At completion of program all collars were surveyed by licensed surveyor to accuracy 10cm using a DGPS system tied to known survey beacons.The grid datum for Mt Clermont is MGA_GDA94, Zone 55.Government topographic maps were used for topographic validation.For the Impact and Invictus RC drill holes, down hole dip surveys were taken at approximately 30m intervals and at the bottom of the hole. For previous RC drill holes down hole surveys were not taken. The hand held GPS was considered sufficiently accurate for elevation data at the stage of exploration for historical work.For the A8G RC drill holes, down hole dip surveys were taken at approximately 30m intervals and at the bottom of the hole.
<i>Data spacing and distribution</i>	<ul style="list-style-type: none">Drill spacing of drill holes is widely variable given the reconnaissance nature of the program to date.Length weighting of drill samples has been applied for quoting drill composite results.
<i>Orientation of data in relation to geological structure</i>	<ul style="list-style-type: none">Drilling is oriented sub-perpendicular to the mineralised trend and stratigraphic contacts as determined by field data and cross section interpretation. Intersection widths will therefore be longer than true widths.No significant sample bias has been identified from drilling due to the optimum drill orientation described above. Where present, sample bias will be reported.
<i>Sample security</i>	<ul style="list-style-type: none">Chain of custody for all samples done from 2006 to 2017 was managed by Invictus Gold and Impact Minerals Ltd. Samples for Clermont are delivered by Invictus Gold

AUSTRALASIAN METALS

ASX Announcement | ASX: A8G | 10 August 2022

Criteria	Commentary
	<p>and Impact Minerals Ltd personnel via courier service to ALS in Townsville, Qld or to SGS Brisbane, or to ALS in Perth, for prep and assay. Whilst in storage, they are kept in a locked yard. Tracking sheets have been set up to track the progress of batches of samples.</p> <ul style="list-style-type: none">• Security of historic drill samples is unknown.• Rock Chip Samples During recent field review consultant geologist Ian Cooper collected rock samples of 2 to 4 kg in weight for each sample. Samples were under supervision of the geologist until submitted to the laboratory.• RC Drill Samples Samples collected and sealed on drill site by site geologist under supervision of QP (Ian cooper) samples delivered daily to transport company depot secure compound and sent to laboratory as palletised batches after cling wrapping
<i>Audits or reviews</i>	<ul style="list-style-type: none">• There has been no review of the sampling techniques and data.

Section 2 Reporting of Exploration Results (Criteria listed in the preceding section also apply to this section.)

Criteria	Commentary
<i>Mineral tenement and land tenure status</i>	<ul style="list-style-type: none">• The Mt Clermont Project currently comprises an exploration license, which is held 100% by the Company. The tenement is over 100% exclusive land so there is no Native Title.• No aboriginal sites or places have been declared or recorded in areas where Impact or A8G had explored. There are no national parks over the license area.• Australasian have assured the author that the tenements are in good standing with no known impediments. A legal opinion on the status of the tenements is provided in the Legal section of this prospectus.
<i>Exploration done by other parties</i>	<ul style="list-style-type: none">• A total of 70 drill holes including RC and diamond holes (for 6,541.50m) at EPM 14116 have been completed at the Clermont Project by previous explorers prior to the Company.
<i>Geology</i>	<ul style="list-style-type: none">• The Mt Clermont Project is interpreted as an epithermal high grade gold-silver deposits that occur to the south of the Nanya Intrusive. The basement rocks in the project area consist of Bathampton Metamorphics, a subdivision of the Anakie Metamorphics. The units consist dominantly of quartz-mica schist and phyllite, with subordinate quartzite, amphibolites and calcsilicate rocks.
<i>Drill hole Information</i>	<ul style="list-style-type: none">• Drill hole details are tabulated in the appendix of this announcement.• All drilling collar and survey data were presented in the tables.• Significant intervals were summarized in the announcement, taking 0.3g/t Au as cut-off and >1.5 g/t Au as highlighted grade
<i>Data aggregation methods</i>	<ul style="list-style-type: none">• All reported assays have been length weighted. No top cuts have been applied. A nominal lower cut -off of approximately 0.3 g/t Au has been applied.• High grade gold intervals internal to broader zones of lower grade mineralisation are reported as included intervals.

AUSTRALASIAN METALS

ASX Announcement | ASX: A8G | 10 August 2022

Criteria	Commentary
<i>Relationship between mineralisation widths and intercept lengths</i>	<ul style="list-style-type: none">The majority of drill holes to date have been sub-perpendicular to the mineralised trend and stratigraphy so intervals are slightly longer than true width unless otherwise stated.
<i>Diagrams</i>	<ul style="list-style-type: none">Please refer to Figures in body of text.
<i>Balanced reporting</i>	<ul style="list-style-type: none">All results reported are representative. For the full dataset for the RC results, please refer to the appendix table.
<i>Other substantive exploration data</i>	<ul style="list-style-type: none">Interpretation of Drill Hole Assay Data <p>A simple Z-score was calculated by previous explorer for all elements and simple additive indices of the scores are used to identify zonation. Z scores are a standard statistical calculation of the number of standard deviations a raw data (assay) value is from the mean of the data, for example a z score of 2 indicates a value 2 standard deviations above the mean. It is a method of normalising data so that statistically meaningful associations between datasets can be made.</p>
<i>Further work</i>	<ul style="list-style-type: none">Follow up work programmes will include further geochemical Auger drilling sampling and RC/diamond drilling
