ABOUT PODIUM MINERALS LIMITED

Podium Minerals Limited (ASX: POD) is planning to become Australia's first platinum group metals (PGM) producer. The significant scale and grade of the Parks Reef Resource provides Podium the opportunity to support an emerging and responsible Australian critical metals mining industry.

The Parks Reef 5E PGM Project is a 15km long platinum group metal deposit which also contains gold and base metal (Cu + Ni) mineralisation. The orebody commences near surface and to date has been proven to continue to approximately 500m vertical depth, which remains open and shows consistency with near surface geology.

The location of Parks Reef in a mining friendly jurisdiction in Western Australia provides a unique opportunity secure an alternative and reliable platinum group metals supply to meet increasing global demand for decarbonised technologies that require PGMs (autocatalysts and hydrogen energy/fuel cell catalysts).

A successful and highly motivated technical and development team is accelerating Podium's strategy to prove and develop a high-value, long-life Australian PGM asset.
