

MULTIPLE SHALLOW HIGH GRADE REE HITS FROM FLAGSHIP TENEMENT

ASX RELEASE: 24 OCTOBER 2022

Highlights

- Shallow, broad scale mineralisation at clay hosted-critical rare earth element (REE) project, located on the South Australian-Victorian border in the Murray Basin
- Results received from high priority tenement EL007647, which is located adjacent to and along strike from AR3's 81.4Mt Koppamurra REE resource¹
- REE concentrations up to 2,326ppm TREO recorded
- 89% of the 28 holes intercepted mineralisation
- Mineralisation widths up to 5 metres
- Results expand the footprint of REE mineralisation on EL007647
- The Company is working towards establishing an initial inferred JORC Compliance Resource by end of Q1 CY 2023

Resource Base Ltd (ASX: RBX) (**Resource Base or the Company**) a strategic metals explorer targeting clay hosted REE and VHMS in Victoria and South Australia, is pleased to announce results from 28 drillholes from EL007647 drilling during early September have been received from the Bureau Veritas assay laboratory in Adelaide.

Resource Base Non-Executive Chairman, Maurice Feilich, commented:

"This is a great start to exploration on this tenement and we eagerly await similar results as drilling continues across EL007647."

Tenement EL007647 is adjacent to and along strike from AR3's Koppamurra REE Resource (81.4Mt at 785ppm TREO, total rare earth oxide) and today's high grade REE hits confirm our view that this tenement has strong REE resource potential. Furthermore, it supports our hypothesis that the South-East of Australia has the potential to host multiple high value REE deposits that are low in deleterious elements, such as uranium and importantly are shallow, thus setting this region apart from many other REE prospective regions around Australia.

This is great to see high grade shallow REE mineralisation to exploration on this tenement and we eagerly await similar results as drilling continues across EL007647."

¹ AR3 ASX Announcement dated 4 July 2022 "104% increase in Mineral Resource at Koppamurra project"

Results from Drilling

EL007647

Ongoing results from drilling on EL007647 continue to identify excellent REE mineralisation.

Recently received results returned significant mineralisation (>350ppm TREO) in 89% of the holes.

Results from 28 holes were recently received from the Bureau Veritas lab in Adelaide.

Exciting intercepts from the recent batch include **3m @ 1,171 ppm TREO**, **5m @ 760 ppm TREO** and highest grades of **1m @ 2,326 ppm TREO** and **1m @ 2,137 ppm TREO**.

Significant intercepts from EL007647 to date are presented in Table 1 below.

Table 1: EL007647 Significant REE Intercepts (>750ppm TREO, 350ppm lower cut-off, max 1m internal dilution). Resource Base 24 October 2022.

HoleID	From (m)	Thickness (m)	TREO (ppm)	MREO (ppm)

MHAC220195	9	3	868	206
MHAC220174*	6	3	827	196
MHAC220163*	11	3	826	183
MHAC220181	10	3	814	192
MHAC220194	9	1	1,846	377
MHAC220200	8	2	1,049	242
MHAC220170*	9	1	1,028	255
MHAC220189	4	2	1,018	260

* indicates drillhole for which results have previously been reported

These results continue to support the REE prospectivity of EL007647 and are expected to form the basis for a significant maiden JORC compliant resource, planned to be released in Q1 2023.

ASX ANNOUNCEMENT

ASX ANNOUNCEMENT

The Murray Basin

The Company believes the Murray Basin has the potential to be a globally significant REE precinct.

Drilling results have confirmed the occurrence of shallow mineralisation, across the two drilled tenements of the Mitre Hill Project, this occurrence is aligned with a horizontal development strategy, i.e. large scale landholding. In line with this horizontal development strategy the Company has expanded its footprint within the region with a view to develop a globally significant, long-life rare earths business at its 100% owned Mitre Hill Project.

The Company continues to test its geological hypothesis and rapidly expand the footprint of mineralisation across its tenement package.

Near Term Drilling Activity

Air core drilling continues on our high priority tenement EL007647, refer figure 2 above, located closely to and along strike from AR3's Red Tail and Yellow Tail JORC compliant clay hosted REE resources.

Land access activities focus on EL007640 to allow for rapid expansion of the EL007646 mineralisation to the North after the Spring rain season.

About Resource Base (ASX: RBX)

Resource Base Limited (ASX: RBX) is a strategic metals explorer targeting clay hosted REE and VHMS in Victoria and South Australia. The Company's flagship project is the **Mitre Hill Project** in South Australia's premier rare earth elements (REE) district. Mitre Hill is a clay hosted REE project with a footprint of 7,022km² (provided all applications are granted). The Mitre Hill Project holds the largest land position in the southern margin of the Murray Basin an emerging globally significant clay hosted Rare Earth precinct.

Regional Location of Mitre Hill Project Tenements, Resource Base 24 August 2022

The **Black Range Project** (619km²) in Victoria's premier porphyry and VHMS target district, the Mount Stavely Volcanic Complex (MSVC) in Western Victoria, captures three fault-bound segments of the MSVC volcanics with a combined strike length of approximately 55kms. The Project includes the advanced Eclipse prospect, which is prospective for copper, gold and zinc. The project consists of one (1) granted tenement and one (1) application in Victoria.

About Resource Base

Resource Base (ASX: RBX) is a battery metals explorer targeting clay Rare Earths and VHMS in Victoria and South Australia.

ASX ANNOUNCEMENT

Forward Looking Statements

Information included in this release constitutes forward-looking statements. Often, but not always, forward looking statements can generally be identified by the use of forward-looking words such as "may", "will", "expect", "intend", "plan", "estimate", "anticipate", "continue", and "guidance", or other similar words and may include, without limitation, statements regarding plans, strategies and objectives of management, anticipated production or construction commencement dates and expected costs or production outputs.

Forward looking statements inherently involve known and unknown risks, uncertainties and other factors that may cause the Company's actual results, performance, and achievements to differ materially from any future results, performance, or achievements. Relevant factors may include, but are not limited to, changes in commodity prices, foreign exchange fluctuations and general economic conditions, increased costs and demand for production inputs, the speculative nature of exploration and project development, including the risks of obtaining necessary licenses and permits and diminishing quantities or grades of reserves, political and social risks, changes to the regulatory framework within which the company operates or may in the future operate, environmental conditions including extreme weather conditions, recruitment and retention of personnel, industrial relations issues and litigation.

Forward looking statements are based on the Company and its management's good faith assumptions relating to the financial, market, regulatory and other relevant environments that will exist and affect the Company's business and operations in the future. The Company does not give any assurance that the assumptions on which forward looking statements are based will prove to be correct, or that the Company's business or operations will not be affected in any material manner by these or other factors not foreseen or foreseeable by the Company or management or beyond the Company's control.

Although the Company attempts and has attempted to identify factors that would cause actual actions, events, or results to differ materially from those disclosed in forward looking statements, there may be other factors that could cause actual results, performance, achievements, or events not to be as anticipated, estimated or intended, and many events are beyond the reasonable control of the Company. Accordingly, readers are cautioned not to place undue reliance on forward looking statements. Forward looking statements in these materials speak only at the date of issue. Subject to any continuing obligations under applicable law or any relevant stock exchange listing rules, in providing this information the company does not undertake any obligation to publicly update or revise any of the forward-looking statements or to advise of any change in events, conditions or circumstances on which any such statement is based.

Competent Person Statement

The information in this report which relates to Exploration Results is based on, and fairly represents, information compiled by Mr Ian Cameron. Mr Cameron is a Member of the Australian Institute of Geoscientists (AIG) and an employee of the Company. Mr Cameron has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves' (the JORC Code). Mr Cameron consents to the inclusion in this report of the matters based on his information in the form and context in which it appears. Mr Cameron does not hold securities in the Company.

The Company first released the exploration results relating to Mitre Hill Project tenement EL007646 on 18 May 2022 and further results were released on 23 August 2022. The Company first released the exploration results relating to Mitre Hill Project tenement EL007647 on 10 October 2022. The Company confirms that it is not aware of any new information or data that materially affects the information in the relevant market announcement.

Annexure B: JORC Code, 2012 Edition – Table 1 report template

Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	Commentary
<i>Sampling techniques</i>	<ul style="list-style-type: none">• Air-core drilling• Sampling at 1m intervals off rig• c. 2kg was taken from each meter sample to produce a 2g charge for analysis using a Lithium Borate Fusion & ICP Multiple elements including REE
<i>Drilling techniques</i>	<ul style="list-style-type: none">• Reverse circulation air-core drilling• NQ size
<i>Drill sample recovery</i>	<ul style="list-style-type: none">• Recoveries logged based on visual estimate of percentage of expected sample volume in 25% gradations from 0% to 100%.• Wetness of sample is recorded as dry, damp or wet• Contamination is recorded on visual basis as hi, low or no contamination based on likelihood of contamination with adjoining sampling intervals due to high level of water or inaccurate sampling boundary.• No attempt has been made to assess potential bias due to sample size fraction loss/gain
<i>Logging</i>	<ul style="list-style-type: none">• Geological log entire drillhole on meter by meter or interval basis as appropriate• Geological boundaries based on 1m sample boundaries• Data recorded to digital platform onsite• Core-yard logging as required
<i>Sub-sampling techniques and sample preparation</i>	<ul style="list-style-type: none">• Scoop spear sampling from 1m rig samples for assay and storage• Field duplicate taken for every meter sample• pXRF sample taken as scoop sample from the 1m sample in warehouse• Lab assay samples determined on basis of XRF results• Sampling techniques are appropriate for the reconnaissance nature of the drilling programs
<i>Quality of assay data and laboratory tests</i>	<ul style="list-style-type: none">• An aliquot of sample is accurately weighed and fused with lithium metaborate at high temperature in a Pt crucible. The fused glass is then digested in nitric acid. This process provides complete dissolution of most minerals including silicates. Volatile elements are lost at the high fusion temperatures. In some cases, elements are reported as oxides. (Nature of the sample may compromise detection limits)• Certified OREAS REE QA/QC standards of various concentrations were inserted at ratio of 1:20.• Blank samples were inserted at ratio of 1:40.• Field duplicates submitted for lab analysis at 1:20 ratio• Geochemical database is managed by dedicated external third party - Geobase Australia Pty Ltd
<i>Verification of sampling and assaying</i>	<ul style="list-style-type: none">• Geological and sampling data is logged into Excel based templates using a auto-validated library structure• Excel data is verified and uploaded to the appropriate project database by the Company's dedicated database management external consultants – Geobase Australia Pty Ltd

ASX ANNOUNCEMENT

Criteria	Commentary
	<ul style="list-style-type: none">Assay results are reported directly to the Exploration Manager and database managerAssay data is imported in digital format into the project databaseSampling and assay data is checked to ensure that all intervals are matched to correct drilling interval with no unexpected gaps, overlaps or duplication.QA/QC results are checked to ensure that values are within accepted industry standard tolerances and reported by the database manager.Oxide values for REE are calculated within the exploration database from the laboratory reported elemental concentrations using standard stoichiometric conversion factors.TREO (Total Rare Earth Oxides) value is calculated within the exploration database using the elemental oxide values as follows; $\text{TREO} = \text{La}_2\text{O}_3 + \text{CeO}_2 + \text{Pr}_{6}\text{O}_{11} + \text{Sm}_2\text{O}_3 + \text{Nd}_2\text{O}_3 + \text{Eu}_2\text{O}_3 + \text{Gd}_2\text{O}_3 + \text{Tb}_4\text{O}_7 + \text{Dy}_2\text{O}_3 + \text{Ho}_2\text{O}_3 + \text{Er}_2\text{O}_3 + \text{Tm}_2\text{O}_3 + \text{Yb}_2\text{O}_3 + \text{Lu}_2\text{O}_3 + \text{Y}_2\text{O}_3$ <ul style="list-style-type: none">MREO (Magnet Rare Earth Oxides) value is calculated within the exploration database using the elemental oxide values as follows; $\text{MREO} = \text{Pr}_{6}\text{O}_{11} + \text{Nd}_2\text{O}_3 + \text{Tb}_4\text{O}_7 + \text{Dy}_2\text{O}_3$ <ul style="list-style-type: none">Significantly mineralised intervals are manually checked to ensure validated correlation to geological data
<i>Location of data points</i>	<ul style="list-style-type: none">Location Method: Garmin handheld 12 channel GPSLocation Accuracy Horizontal: $\pm 3\text{m}$Location Accuracy Vertical: $\pm 6\text{m}$Grid System: GDA94 UTM Zone 54Drillhole locations are extrapolated onto SRTM digital elevation model to obtain final elevation valueTopographic control is adequate at this stage of exploration
<i>Data spacing and distribution</i>	<ul style="list-style-type: none">Systematic grid style drilling at nominal 100m spacing along E-W lines spaced 200m apart in the N-S direction.Exclusion of cultural overlay zones in first pass programBroad roadside reconnaissance drilling with drillhole spacings ranging from approximately 0.25km to 1km
<i>Orientation of data in relation to geological structure</i>	<ul style="list-style-type: none">Vertical drill holesAir-core drilling is of reconnaissance nature and not intended to produce small scale structural informationGeological domains within drilled intersections are approximately horizontal and therefore approximately perpendicular to drill direction
<i>Sample security</i>	<ul style="list-style-type: none">Samples collected during drilling and removed to secure warehouse each dayCompilation of samples for dispatch to laboratory takes place in the secure warehouse by company employeesSamples are palletised and protected with multiple layers of packaging film for transport by logistics contractor to the analytical laboratory, Bureau Veritas in Adelaide.
<i>Audits or reviews</i>	<ul style="list-style-type: none">QA/QC reporting by external consultant Geobase Australia Pty Ltd has not identified any significant data issues

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	Commentary
<i>Mineral tenement and land tenure status</i>	<ul style="list-style-type: none">Drilling related to the reported results was undertaken on EL007646 and EL007647 which are 100% owned by Mitre Hill Pty Ltd, a wholly owned subsidiary of Resource Base Ltd (ASX:RBX).Information relevant to E00L7646 includes;<ul style="list-style-type: none">Currently in good standing and valid until 7th November 2026There are no non-government royalties applicable.Land use is mixed grazing/cropping and privately owned plantation forest.There are no registered Native Title claims.There is no known impediments to obtaining a license to operate in the area and exploration is active and on-going.Information relevant to E00L7647 includes;<ul style="list-style-type: none">Currently in good standing and valid until 17th June 2027There are no non-government royalties applicable.Land use is mixed grazing/cropping, privately owned plantation forest, State Forest crown land.There are no registered Native Title claims.There is no known impediments to obtaining a license to operate in the area and exploration is active and on-going.
<i>Exploration done by other parties</i>	<p>EL007646</p> <ul style="list-style-type: none">Previous exploration work has been very limited.There has been no previous exploration targeting REE1979-1982 Western Mining explored the region for brown coal. No holes were drilled on the current EL007646 area.1986-1989 CRA Exploration explored the region for Heavy Mineral Sands, drilling one hole only on the current EL007646 area. Results did not warrant follow up.2007 Mineral Sands Ltd explored the region for Heavy Mineral Sands with no drilling on the current EL007646 area.2008 Corvette Resources Ltd explored the region for Heavy Mineral Sands with no drilling on the current EL007646 area. <p>EL007647</p> <ul style="list-style-type: none">Previous exploration in the area includes campaigns for;Oil and gas in the mid-1960'sHeavy mineral sands in the mid-1970'sCoal in the late-1970's to early-1980'sHeavy mineral sands again in the mid- to late-1980'sHeavy mineral sands again in the mid- to late-2000'sDuring these periods of exploration only 1 drillhole has been excavated on the current EL007647 tenement area, a coal exploration bore in the 1980.
<i>Geology</i>	<ul style="list-style-type: none">The project area is considered highly prospective for the discovery of economic deposits of Rare Earth Elements (REE) deposited as secondary accumulations within Murray Basin stratigraphy and potentially occurring as ionic attachments within clayey horizons.Project geology consists of poorly consolidated clayey and sandy horizons of

ASX ANNOUNCEMENT

Criteria	Commentary
	<p>the Bookpurnong formation in the lower Loxton-Parilla Sands unit overlying a substantial base of the Duddo Limestone (Gambier Limestone in SA).</p> <ul style="list-style-type: none">Regionally, REE accumulations are known to occur in clayey horizons immediately above the limestone unit.
<i>Drill hole Information</i>	<ul style="list-style-type: none">Refer to Annexure A Tables 1 and 2
<i>Data aggregation methods</i>	<ul style="list-style-type: none">Significant TREO intercepts generated by composite of results $\geq 350\text{ppm}$ TREO with no upper cut and up to 1m internal dilution allowed
<i>Relationship between mineralisation widths and intercept lengths</i>	<ul style="list-style-type: none">Vertical drillingStratigraphy and structure appears to be mostly flat lyingDrilled intercepts are expected to be very near to true widths within limitations of 1m sampling intervals.
<i>Diagrams</i>	<ul style="list-style-type: none">Please see maps and diagrams included in the announcement text
<i>Balanced reporting</i>	<ul style="list-style-type: none">Reporting results significant to the drill program and targets tested in this early stage of testing
<i>Other substantive exploration data</i>	<ul style="list-style-type: none">Reported mineralised intercepts occur for the most part in the expected prospective horizon in the upper portion of the Duddo Limestone and the Bookpurnong Formation clays and sandy clay horizons immediately above the limestone contact.
<i>Further work</i>	<ul style="list-style-type: none">Grid-based drilling on private farmland.Land access and stakeholder engagement.Roadside reconnaissance air-core drilling.
