

**Quarterly Activities and Cash Flow Report**  
**for the Quarter Ended 30 September 2022****CORPORATE****Strategy and Business Model**

Cyclone Metals Limited (**ASX: CLE**) (**Cyclone Metals** or the **Company**) is an Australian domiciled mineral development and investment company. Cyclone Metals has interests in several exploration and mining projects and companies, providing exposure to copper, gold, iron ore, lithium, rare earths, uranium and lead-silver-zinc assets in Australia, Europe, Africa and South America (refer Figure 1).

Cyclone Metals' strategy is to acquire and invest in undervalued and/or distressed mineral assets and companies (**Projects**) and:

- improve the value of these Projects, through a hands-on approach to management, exploration, evaluation and development; and
- retain long-term exposure to these Projects through a production royalty and/or equity interest.

Cyclone Metals aims to deliver Shareholder value by adding value to these undeveloped Projects. If Projects are converted into cash, the Company intends to follow a policy of distributing surplus cash to Shareholders.

**Unmarketable Parcels Sale Facility**

On 10 May 2022, the Company announced that it had established an Unmarketable Parcel Sale Facility (**Facility**) for shareholders who hold less than A\$500 worth of fully paid ordinary shares (**Unmarketable Parcel**) in the Company. The Company established the Facility to enable shareholders who hold an Unmarketable Parcel to sell their shares without having to act through a broker or pay brokerage or handing fees. Shareholders with an Unmarketable Parcel were instructed to return the Share Retention Form (**Retention Form**) by the closing date if they wished to retain their shareholding.

On 6 July 2022, the Company confirmed that following receipt of Retention Forms, the final number of shares eligible to be sold under the Facility was 43,064,049 shares from a total of 2,588 shareholdings. The Company has completed the sale of these shares with proceeds from the sale being distributed to participating shareholders.

**Placement**

On 28 July 2022, the Company announced that it would be undertaking a placement at an issue price of \$0.004 per fully paid ordinary share (**Placement Shares**) with one free unlisted free attaching option for every two shares at an exercise price of \$0.005 expiring 30 June 2024 (**Placement Options**) (**Placement**). On 28 July 2022, the Company issued 12,500,000 Placement Shares and 6,250,000 Placement Options. Funds raised will be used for general working capital purposes.

**Appendix 5B Quarterly Report and Statement of Cash Flows**

The ASX Appendix 5B quarterly report is attached to and lodged with this report. The Company's Appendix 5B Quarterly Report covers the 3-month period from 1 July 2022 to 30 September 2022.

During the quarter, exploration and evaluation expenditure was \$188k, predominantly associated with work undertaken on the Grand Port Project, Nickol River Project and tenement compliance costs. Administration and corporate expenditure during the quarter was \$178k which included Director, employee, and consultant costs. In addition, a payment of \$260k was made to the ATO in respect to the tax amount payable. Investing activity outflows during the quarter totalled \$62k comprising an equity investment in a private company with gold interests in Papua New Guinea (\$30k), tenement stamp duty expense (\$2k) and expenses associated with the granting of tenements in Cameroon (\$30k). Financing activity inflows during the quarter was \$500k from the advancement of a short-term loan from European Lithium Ltd (ASX: EUR).

As at 30 June 2022, the Company had approximately A\$126k.

### Payments to Related Parties and their Associates

In accordance with ASX Listing Rule 5.3.5, payments to related parties of the Company and their associates during the quarter totalled \$41k relating to the Executive Directors salary and Non-Executive Director fees (\$11k) and payments to Director related entity (\$30k). These amounts are included at item 6.1 and item 6.2 of the Appendix 5B.

On 17 August 2022, the Company entered into a loan agreement and received funds of \$500,000 from European Lithium Ltd (ASX: EUR). The loan is repayable on 30 November 2022 and accrues interest of 5% per annum. Mr Tony Sage is a director of EUR.

Refer to the Remuneration Report in the Annual Report for further details on director remuneration and related party transactions.

### Figure 1: Group Structure

**PROJECTS**

**Grand Port**

Grand Port Limited holds 100% of 6 projects over a diversified portfolio of gold, copper, nickel and PGE assets in New Zealand, with locations show in Figure 2

Figure 2: Location of Grand Port Projects

South Island – Mareburn and Macraes South

The Mareburn Gold Project (**Mareburn Project**) and Macraes South Gold Project (both granted) (**Macraes Project**) (figure 3) covers 464km<sup>2</sup> within the Otago Goldfield of the South Island, which has 10Moz of proven historical gold production. The Mareburn Project sits 8km north of the producing Macraes Gold Mine and processing plant, New Zealand’s largest producing gold mine, and ~2km from the Coronation open pit. The Macraes Project is contiguous to the south of the Macraes Gold Mine and processing plant.

During the quarter a full re-processing effort of all magnetic, radiometric, and airborne electromagnetic data over Macraes South and Mareburn was initiated, with interpretation now underway, with results expected in late November 2022. The extensive surveys completed by a previous explorer will form the basis of future exploration efforts, in conjunction with geochemical sampling results.

Figure 3: Macraes South and Mareburn Project locations, contiguous to the Macraes Gold Mine.

#### South Island – Drybread and Waikerikeri

The Drybread – Waikerikeri Gold Project (granted during the quarter) (**Drybread Project**) (Figure 4) covers ~198km<sup>2</sup> and crosses over Santana Minerals Limited's (ASX: SMI) Bendigo-Ophir Project in Central Otago and contains historical alluvial workings contiguous to the Drybread Project. The area has been underexplored for hard rock potential with no primary gold exploration undertaken.

We continue to watch the developments of Santana Minerals, with significant primary mineralisation being intersected.

Figure 4: Drybread and Waikerikeri projects contiguous to Santana Minerals project

### North Island - Muirs

Muir's Reef Gold Project (granted in March 2022) (**Muir's Project**) covers 52.6km<sup>2</sup> and is close to Oceania's Hauraki Gold Field with 45Moz proven historical gold production.

During the Quarter the original Muir's Reef underground mine plans were digitised and incorporated into the working 3D model. A maiden JORC 2012 Mineral Resource Estimate (**MRE**) is now planned for later early next year.

The Muir's Project remains underexplored. The proposed work program on the Muir's Project is as follows:

- Stage 1 – Detailed structural mapping from existing gradient array resistivity survey and high-resolution magnetic survey, and field checking, in association with Ionic Leach<sup>TM</sup> geochemistry sampling as a first pass. Collection of LiDAR (ultra-detailed DEM) may substantially improve understanding of the mineralisation. Petrographic studies on existing diamond core focusing on fluid inclusion temperature studies would assist in defining potential gold deposition levels.

- Stage 2 – Infill and step out drilling is recommended using diamond core drilling at both Massey Reef and Muirs Reef (Muir's Projects) to expand the resource, and test targets identified in Stage 1 work and convert the non JORC estimate to JORC (2012).

## Cameroon

On 3 June 2022, Cyclone announced that it entered into a binding exclusivity agreement with Ewaah Cameroon Ltd (**Ewaah**) to secure the right to purchase 100% of the issued capital of Camdu Corporation Ltd (**Camdu**) (a company incorporated in Cameroon), which in turn has applied for the mining permit that covers the area of a world class cobalt deposit in southeastern Cameroon, the Nkamouna-Mada Project (**Project**).

The exclusivity agreement has been entered into between Cyclone and Ewaah to secure Cyclone's exclusive right to acquire the mining permit once it is granted to Camdu by the relevant mining authority in Cameroon. The mining permit covers an area of 1,645km<sup>2</sup> and the Nkamouna and Mada deposits are located within that area.

During the Quarter, the Non-Executive Chairman of the Company was in Cameroon meeting with various parties in the hope of advancing the granting of the licenses to Camdu.

## Wee MacGregor

Mining International Pty Ltd, a wholly owned subsidiary of Cyclone Metals, holds tenure to 4 mining leases located 40 km southeast of Mt Isa in Queensland (**Wee MacGregor Project**) (refer Figure 5).

The tenements are located within in the Eastern Fold Belt of the Mt Isa inlier. The tenements are located in the Mary Kathleen Zone/Wonga Subprovince. This area is prospective for a variety of deposit types, most notably structurally controlled epigenetic copper and gold deposits. Cohiba Minerals Limited (**Cohiba**), through wholly owned subsidiary Cobalt X Pty Ltd, has earned an 80% interest in mining licences ML 2504, ML 2773 and ML 90098 under a Farm-in agreement with Cyclone Metals. The Company retains a 20% interest in the mining licences and a pre-emptive right over the remaining 80%.

The Lady Ethleen tenement (ML 2771) has been 100% retained by Cyclone Metals (**Lady Ethleen**).

The Lady Ethleen tenement is currently being utilized for a trial mining and processing exercise using a newly developed green leach process known as GlyLeach™. (refer ASX announcement 4 October 2020). A successful trial will mean a significant shift in future processing technology and will in turn facilitate possible development of the part owned, nearby Wee Macgregor Project as well as many other potential small assets in the district, that may be economic with access to appropriate processing technology.

The process to be used, known as GlyLeach™, was originally developed and patented by Curtin University and is being commercialised globally by Perth based Mining and Process Solutions (**MPS**). The GlyLeach™ process involves the use of Glycine as a lixiviant under alkaline conditions. This process has a number of significant benefits over traditional acid leaching including its environmentally friendly state which is non-toxic to humans and wildlife, the ability to selectively leach valuable metals whilst leaving gangue minerals such as iron, manganese, silicates and carbonates in the leach residue, the ability to leach ores of different oxidation states (depending on process type, temperature, residence time, particle size, etc) and all the while being recyclable as the glycine is not chemically consumed in the overall process.

Results are expected to demonstrate the best process to use for material types found in the Mount Isa / Cloncurry district. A positive project outcome could unlock the possibility for development of Lady Ethleen and a centralised processing hub in the district.

Within a 10 km radius of Lady Ethleen, there are numerous stranded projects that may all be suitable candidates to supply feed to a future operation including Lady Jenny (1 km), Wee MacGregor (3 km), Rosebud (10 km) and Inkerman (7.5 km) as well as several more in the wider district.

A final report on the testwork was received during the quarter. Conclusions are as listed below:

- The use of acid while effective in recovery of base metals, GlyLeach™ extracted more value.
- The amount of acid required would make acid leaching cost prohibitive.
- Grinding and the method of leaching greatly affects the leaching performance across all three composites.
- The oxide composite proved to yield the highest metal recovered of the three composite tested.
- Accountability between the tests were acceptable and shown in the close agreement between the two techniques used to determine the extraction reported.
- There were some difficulties with filtration and adsorption where a hot wash was shown to significantly improve leaching.
- The use of an acid pre-treatment in liberating metals particularly Cu proved necessary.
- The tests demonstrated that the GlyCat™ technology can extract the base and precious metals in a single stage.
- The tests show that the GlyLeach™ process followed by the GlyCat™ process can be utilised in a heap leach situation.
- If left in “as received” sizing, the oxide composite should be treated in agitated leach tanks while the transition and sulphide composite would leach best in a column although would need to evaluate if percolation is an issue on uncrushed material.
- Overall grinding and leaching in the presence of resin would yield the most metal recovered from all three composites.

A series of recommendations were also provided involving additional testwork using larger scale equipment. The Company continues to consider the results and its next steps.

Figure 5 – Wee McGregor Project Location

## Yalardy

The Yalardy tenements (E 09/2441 and E 09/2442) cover a combined 297 graticular blocks or a total of 914.5 square kilometers starting approximately 33km east of the Overlander roadhouse near the turnoff to Shark Bay.

No exploration was undertaken during the quarter, with the company assessing the best way to advance the project.

## Nickol River Gold Project

The Nickol River Project (**NRP**) (see Figure 6) comprises seven granted Mining Leases (M47/87, M47/127, M47/401, M47/421, M47/435, M47/455, M47/577) and five Miscellaneous Licences (L47/686, L47/687, L47/688, L47/689, and L47/565 (application)) and a Water Licence 177790.

A Program of Work (PoW) was approved on 19 January 2022, for the Nickol River Gold Project for 18 test pits 20m x 10m by 1m deep over tenements M47/87, M47/401, M47/127, M47/421 and M47/577.

Specimen gold within quartz veins has been recovered from the test pit within M47/127, up to 712 grams in weight. The vein gold indicates that primary gold is the potential source of the eluvial gold mined from the area over the past 140 years.

Gold nuggets were recovered from every pit in the Pit Program. It should be noted that all the test pits were over previously worked ground and is only a small indication of the eluvial gold found over 140 years.

The most pleasing aspect of the pit program was the extensive reef structures that were uncovered. Only a few reef systems are visible from the surface and we now know that a drilling program will have to take this information into account in the planning stage.

Photo 1: Nickol River Project, gold nuggets recovered and owned by Cyclone, see Table 1 in ASX Release 10 October 2022 for locations.

Figure 6 - Nickol River Project location and tenements, located 10km east of Karratha in the West Pilbara of Western Australia

## Marampa

Marampa is an iron ore project at the development stage, located 90km northeast of Freetown, Sierra Leone, West Africa (**Marampa** or **Marampa Project**). The Marampa Project includes one mining licence (ML05/2014) comprising 97.40km<sup>2</sup> and one exploration licence (EL46A/2011) comprising 145.86km<sup>2</sup>.

### ML05/2014

In 2014, Marampa Iron Ore (SL) Limited (**Marampa SL**), a wholly owned subsidiary of Cyclone Metals was granted the mining and environmental licences for ML05/2014 (together the **Mining Licence**). The Company has spent circa US\$62.7m on exploration and development to date on the Marampa Project.

In September 2018, Marampa SL received a letter from the Sierra Leone Ministry of Mines (**SLMOM**) cancelling the Mining Licence. In 2018, Marampa SL commenced legal action in Sierra Leone to

challenge SLMOM's decision to cancel the Mining Licence, however, the Board has agreed to place legal action against the SLMOM on hold.

The Company confirms that it does not currently have tenure over ML05/2014. Whilst no formal application has been made to date, the Company has started in Q1/2021, and will continue to be, engaged in dialogue with the relevant Sierra Leonean authorities to have the Mining Licence reinstated or reissued by mutual agreement. Although this dialogue has been restricted significantly during the period by the impacts of COVID-19 on travel and government operations.

However, since Q3/2021 management continued to actively engage with relevant stakeholders at the SL government to fast-track the process for reissuance of the Mining Licence. In January 2021 the Company met with high level company and public officials from Sierra Leone at the Minister of Mines office in Freetown to discuss and propose an investment case for the Marampa Project supported by the attractive iron ore market price and outlook. A formal response regarding the proposal lodged on 14 January 2021 is still pending, despite the Company's consistent follow up. Some ongoing political turmoil makes it difficult to predict when the government will assign the licence.

Whilst there can be no guarantee that the SLMOM will agree to reinstate or reissue a Mining Licence, if Marampa SL were to successfully recover the Mining Licence, the Board is committed to working with the relevant parties to secure access to the necessary plant and equipment and infrastructure to enable the ramp up of the Marampa Project upon the reissuance of the Mining Licence for the benefit of our shareholders as well as, importantly, the Government and People of Sierra Leone.

#### **EL46A/2011**

In 2014, Marampa SL was granted exploration license EL46A/2011. In June 2014 the SLMOM extended EL46A/2011 for a further 2-year term from 31 July 2015 until 31 July 2017. Marampa SL has not paid renewal fees to the SLMOM in respect of EL46A/2011 since 31 July 2017. However, Marampa SL has not received any termination documentation or request for information from the SLMOM, therefore is of the view that EL46A/2011 remains a valid license. Marampa SL has contacted the SLMOM asking them to confirm the status of EL46A/2011 however no response has been received to date therefore tenure over EL46A/2011 remains uncertain. Marampa SL will continue to follow up with the SLMOM to determine the status of EL46A/2011. The management of Marampa SL has continued to be active in discussions with SLMOM to fast-track the process getting the EL46A/2011 to be issued again.

The Board confirms that given the inherent uncertainties relating to the future of the Marampa Project, the carrying value of the Marampa Project in Cyclone Metal's audited accounts was fully impaired as at 30 June 2016 and remains fully impaired.

The Company is currently committing minimum expenditure on the Marampa Project and no exploration activities are currently underway at the Marampa Project.

#### **Kukuna**

Dempsey Resources Bermuda Limited holds the Kukuna Iron Ore Project located in Sierra Leone (**Kukuna or Kukuna Project**).

The Kukuna Project is located 120 km northeast of Freetown in the northwest of Sierra Leone and consists of one exploration licence (EL22/2012) covering 68km<sup>2</sup>. The licence comprises rocks known to host specular hematite mineralisation. Dempsey has not paid renewal fees to the SLMOM in respect

of Kukuna. However Dempsey has not received any termination documentation or request for information from the SLMOM, therefore is of the view that Kukuna remains a valid license.

The Kukuna Project remains under care and maintenance.

All exploration results for above Mining and Exploration Licenses are kept within the Company.

Announcement authorised for release by the Board of Cyclone Metals.

### **Competent Person Statement**

The information in this report that relates to Wee MacGregor is compiled and collected by Mr Olaf Frederickson, who is a Member of the Australasian Institute of Mining and Metallurgy. Mr Frederickson has sufficient experience that is relevant to the style of mineralisation, and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 edition of the Australasian Code for Reporting of Exploration, Results, Mineral Resource and Ore Reserves (JORC Code 2012). Mr Frederickson consents to the inclusion in the report of the matters based on this information in the form and context in which it appears.

The Information in this report that relates to Nickol River Project for exploration results, mineral resources or ore reserves is based on information compiled by Mr Edward Mead, who is a Member of the Australasian Institute of Mining and Metallurgy. Mr Mead is a consultant to the company and employed by Doraleda Pty Ltd. Mr Mead has sufficient experience which is relevant to the style of mineralisation and type of deposits under consideration and to the activity that he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the 'Australian Code for Reporting Exploration Results, Mineral Resources and Ore Reserves' (the JORC Code). Mr Mead consents to the inclusion of this information in the form and context in which it appears in this report.

The Information in this report that relates to the Grand Port, New Zealand exploration results, mineral resources or ore reserves is based on information compiled by Mr Allan Younger, who is a Member of the Australasian Institute of Mining and Metallurgy. Mr Younger is an employee of the company. Mr Younger has sufficient experience which is relevant to the style of mineralisation and type of deposits under consideration and to the activity that he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the 'Australian Code for Reporting Exploration Results, Mineral Resources and Ore Reserves' (the JORC Code). Mr Younger consents to the inclusion of this information in the form and context in which it appears in this report.

**APPENDIX 1 : TENEMENT STATUS**

The mining tenements held at the end of each quarter, acquired and disposed of during the quarter and their location:

Tenement reference	Project & Location	Acquired interest during the quarter	Disposed interest during the quarter	Interest at the end of quarter

8.6	Total available funding (item 8.4 + item 8.5)	126
8.7	<b>Estimated quarters of funding available (item 8.6 divided by item 8.3)</b>	0.20
	<p><i>Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.</i></p> <p>* Refer to section 7 for details on further drawdowns on the Winance facility.</p>	
8.8	If item 8.7 is less than 2 quarters, please provide answers to the following questions:	
8.8.1	Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
	Yes.	
8.8.2	Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
	Yes. The Company continues to seek funding options including the raising of additional funds and the realisation of certain of the Company's unencumbered financial assets through the sale of its listed shares (if required).	
8.8.3	Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?	
	<p>Yes. The Directors believe that it is reasonably foreseeable that the Company will continue as a going concern based on the following factors:</p> <ul style="list-style-type: none"> <li>▪ Raising additional funds (as outlined above)</li> <li>▪ Realisation of certain of the Company's unencumbered financial assets through the sale of its listed shares (if required)</li> </ul>	
	<i>Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.</i>	

**Compliance statement**

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

Date: 31 October 2022

Authorised by: Board of Directors  
(Name of body or officer authorising release – see note 4)

**Notes**

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
