Redcastle Resources Ltd (**Redcastle** or **Company**) is pleased to present its Quarterly Report for the period ending 30 September 2022. The Company continued with an active quarter of infill and extensional RC drilling programs at the Company's flagship Redcastle Gold Project.

Results released during the quarter from the Company's second RC drilling program returned numerous high grade gold intercepts (See table 1) with the program designed to test the strike extensions of the high grade, shallow results encountered during the Company's maiden RC drill programme at two targets. For further information concerning the Company's maiden programme, see the ASX announcement dated 16 May, 2022. Holes were drilled on a nominal 20m by 40m pattern with maximum depths of approximately 80m. In total results from 22 holes for an advance of 1,382m were reported upon. Generaly, the drilling encounted similar rock types to the previous programme, with minor shallow old workings also intersected.

During the quarter the Company successfully completed its third RC drill program. A total of 41 RC drill holes for the advance of 2,774 metres was completed. The program was designed to follow up and significantly extend coverage at Redcastle Reef to a strike length of 700 metres, whilst testing the Queen Alexandra prospect at depth and infill along the strike of the historic workings. Assay results from the program remain pending compilation and validation by the company's consultant geologist with results expected to be announced shortly.

Executive Director Trevor Dixon said: "The Redcastle gold system is emerging as a significant high-grade opportunity from results received thus far, we await further confirmation from the drilling carried out over the quarter".

During the quarter a comprehensive broad spaced auger geochemical sampling program across the bulk of the project area returned results defining extensive gold anomalism within the Redcastle Mining Centre tenement M39/318 highlighting a gold in soils anomaly some 1.7km in length, with parallel features becoming apparent as a result. Several discrete targets are observed in the South West and North West of the project area on tenements P39/5814 and P39/5815 with broad based animalism in the Eastern and North Eastern area within P39/5573. (See Figure 1 and ASX release dated 15<sup>th</sup> August 2022)

Plans for an infill soils program is now underway. The program will focus on new target areas and assist with future air core drilling plans.
