About Nimy Resources and the Mons Nickel Project

Nimy Resources is an emerging exploration company, with the vision to responsibly discover and develop an economic nickel sulphide project in Western Australian, a Tier 1 jurisdiction.

Nimy Resources has prioritised the development of the Mons Project, a district scale land holding consisting of 15 approved tenements, over an area of 2,564km² covering an 80km north/south strike of ultramafic.

Mons is located 140km north - northwest of Southern Cross and covers the Karroun Hill nickel district on the northern end of the world-famous Forrestania nickel belt. Mons features a similar geological setting to the southern end of the Forrestania nickel belt and the Kambalda nickel belt.

The Mons Project is situated within potentially large scale fertile “Kambalda-Style” and “Mt Keith-Style” nickel rich komatiite sequences within the Murchison Domain of the Youanmi Terrane of the Archean Yilgarn Craton.
