

## FINAL NI-CU-PGE ASSAYS RECEIVED FROM MT SHOLL DRILLING, RESOURCE MODELLING UNDERWAY

### HIGHLIGHTS

- All results from the 2022 drilling program at the A1, B1 and B2 deposits now returned,
- High-grade & broad zones of Ni-Cu-PGE sulphide mineralisation, including notable intercepts:
  - 22A1DD002**
    - 17m @ 0.76% Ni; 0.87% Cu; 1.11g/t 3E<sup>1</sup>; 318ppm Co and 3.9g/t Ag (**or 17m @ 1.67% Ni Eq<sup>2</sup> from 92.8m, including;**
    - 7.5m @ 1.16% Ni; 1.20% Cu; 1.70f/t 3E<sup>1</sup>; 452ppm Co and 4.99g/t Ag (**or 7.5m @ 2.47% Ni Eq<sup>2</sup> from 133m**
  - 22B1DD002**
    - 21m @ 0.65% Ni; 0.92% Cu; 0.84g/t 3E<sup>1</sup>; 273ppm Co and 4.13g/t Ag (**or 21m @ 1.48% Ni Eq<sup>2</sup> from 67m), including;**
    - 1.0m @ 1.68% Ni; 2.22% Cu; 1.52g/t 3E<sup>1</sup>; 613ppm Co and 9.10g/t Ag (**or 1m @ 3.51% Ni Eq<sup>2</sup> from 81.0m**
  - 22B1DD001**
    - 28m @ 0.5% Ni; 0.78% Cu; 0.75g/t 3E<sup>1</sup>; 210ppm Co and 4.17g/t Ag (**or 28m @ 1.21% Ni Eq<sup>2</sup> from 54m), including;**
    - 4.0m @ 1.46% Ni; 1.30% Cu; 1.15g/t 3E<sup>1</sup>; 526ppm Co and 5.89g/t Ag (**or 4.0m @ 2.63% Ni Eq<sup>2</sup> from 73.0m**
  - 22B1DD003**
    - 21.5m @ 0.46% Ni; 0.73% Cu; 0.77g/t 3E<sup>1</sup>; 198ppm Co and 3.82g/t Ag (**or 21.5m @ 1.16% Ni Eq<sup>2</sup> from 149m**
- Results continue to correlate with historical drilling and indicate that **all deposits remain open in multiple directions**
- Modelling of an updated mineral resource estimate under JORC (2012) underway and anticipated in Q1'23
- LiDAR survey of the Mt Sholl deposit areas completed

<sup>1</sup>3E = combined Pd, Pt & Au values

<sup>2</sup>Ni Eq = nickel equivalent grade (formula and assumptions can be found in Table 4 of this announcement)

### QUICK STATS

ASX Code: RDN

DAX Code: YM4

### BOARD & MANAGEMENT

**Non-Executive Chairman**  
Mr Michael Davy

**Managing Director**  
Mr Dusko Ljubojevic

**Non-Executive Director**  
Mr Martin Pawlitschek

**Non-Executive Director**  
Mr Dale Ginn

**Chief Operating Officer**  
Mr Warrick Clent

**Company Secretary**  
Ms Kyla Garic

(~840km<sup>2</sup>)

**Raiden Resources Limited (ASX: RDN DAX: YM4) ("Raiden" or "the Company")** is pleased to report on the final batch of results from the recently completed Mt Sholl drilling program.

**Mr Dusko Ljubojevic, Managing Director of Raiden commented:** *"The results from the A1 and B1 deposits are very positive and similar to the results from the B2 drilling. On all three zones, we are seeing a coherent and continuous body of mineralisation, with impressive Ni-Cu-PGE grades defined from the surface. The near surface location of much of the mineralised material increases the likelihood of an open pit mining scenario. Drilling clearly indicates that mineralisation remains open in multiple strike directions and to depth. Management are optimistic that further drilling may increase the currently defined extents of mineralisation.*

*Twin drilling by Raiden with systematic sampling and analysis of the full suite of elements, has in some cases returned higher grades in comparison to relevant historical drilling, and providing encouragement that a systematic infill program and analysis of full suite of minerals may improve the average grades within the deposit.*

*We will now commence with resource modelling, which we aim to release in the early part of Q1'23, along with commencement of metallurgical evaluations.*

*We believe that Mt Sholl has the potential to become one of the significant Australian Ni-Cu-PGE sulphide resources."*

These latest assays and intercepts are from the final batch of samples despatched by the Company during its maiden drill program at Mt Sholl. The company completed a total of 39 diamond holes for 4,204m between 19 September and 23 October 2022.

The **mineralisation at the A1, B1 and B2 deposits remain open in multiple directions**, with the prospective contact between the layered intrusive host rocks of all three deposits and the surrounding country rock, extending out and down from known mineralisation.

As noted in previous announcements **this prospective contact extends for a cumulative 10.5 kilometres across the project area, with only approximately 4.3km drill tested to date (Figure 1)**. This presents an excellent opportunity to define further, near surface mineralisation on the project. The mineralisation also remains open to depth, further improving the outlook for resource growth with additional drilling.

**Figure 1: Mt Sholl Project area with Prospective Contact zones, drill hole locations over interpreted geology, JORC Exploration target<sup>3</sup> (red) and EM targets (green).**

The mineralisation styles intersected in these last drill holes included massive, semi-massive, stringer and disseminated mineralisation within a predominantly gabbro/dolerite host, bounded by basalt flows above and below the mineralisation. In some discrete areas an ultramafic pyroxenite has been logged, which also hosts massive and disseminated sulphide mineralisation, indicating that multiple units may host mineralisation within the ultramafic sequence.

Sulphide mineralisation intersected continues to consist of predominantly fine grained pyrrhotite, chalcopyrite and pentlandite.

**Figure 2: 22B1DD001 (54.28-77.00 metres – cut NQ core 61.1mm diameter) incl. 4.0m @ 2.63% Ni Eq from 73.0m.** Strongly mineralised pyroxenite with fine-grained pyrrhotite and chalcopyrite occurring as disseminated mineralisation.

Figure 10: Mt Sholl Project in relation to key infrastructure and nearby JORC (2012) Resources.<sup>3,4,5</sup>

### Mt Sholl Ni-Cu-PGE Project Overview

The consolidated tenements are located 22 kilometres southeast of Karratha and 10 kilometres northeast of the mothballed Radio Hill mine in the Pilbara region of Western Australia, covering a total land area of 42km<sup>2</sup>.

The tenements are underlain by Paleoproterozoic greenstone rocks, primarily basalt, and part of the Mesoproterozoic Mount Sholl layered mafic-ultramafic intrusive complex. The consolidated tenements host several Ni-Cu-Co-PGE deposits, with mineralisation occurring

as disseminated, matrix, stringer and rare massive pyrrhotite-pentlandite-chalcopyrite. High pyrrhotite content in ore indicates that Ni-Cu mineralisation in the intrusion across the consolidated tenements could be associated with discrete magnetic highs.

Extensive work on the properties targeting Ni-Cu-Co-PGE mineralisation was conducted by a number of companies from the early 1970's through to 2016. Exploration programs included the collection of surface samples (soil, auger and rock), airborne geophysics (magnetics, EM) and drilling (RAB, RC and diamond).

*The information in the referenced in announcement 3 footnoted above that relates to exploration results has previously been released on the ASX. The Company confirms that it is not aware of any information or data that materially affects the information included in the market announcements, and that all material assumptions and technical parameters continue to apply. The Company confirm that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.*

**Competent Person's Statement**

*The information in this announcement that relates to exploration results is based on and fairly represents information and supporting documentation, as previously announced by the Company, and has been reviewed and approved by Mr Warrick Clent, a competent person who is a member of the Australasian Institute of Mining and Metallurgy (AusIMM). Mr Warrick Clent is employed by Raiden Resources Limited. Mr Warrick Clent has sufficient experience that is relevant to the style of mineralisation and type of deposits under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 edition of the JORC Code. Mr Warrick Clent has provided his prior written consent as to the form and context in which the exploration results and the supporting information are presented in this announcement.*

*The information in this announcement that relates to Exploration Targets is based on and fairly represents information and supporting documentation prepared by Mr Bruce H van Brunt, a Competent Person who is a Fellow of the Australasian Institute of Mining and Metallurgy (FAusIMM and a full-time employee of BvB Consulting. Mr Bruce H van Brunt has sufficient experience that is relevant to the style of mineralisation and type of deposits under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 edition of the JORC Code. Mr Bruce H van Brunt has provided his prior written consent as to the form and context in which the exploration results and the supporting information are presented in this announcement.*

**Disclaimer:**

Forward-looking statements are statements that are not historical facts. Words such as "expect(s)", "feel(s)", "believe(s)", "will", "may", "anticipate(s)", "potential(s)" and similar expressions are intended to identify forward-looking statements. These statements include, but are not limited to statements regarding future production, resources or reserves and exploration results. All of such statements are subject to certain risks and uncertainties, many of which are difficult to predict and generally beyond the control of the Company, that could cause actual results to differ materially from those expressed in, or implied or projected by, the forward-looking information and statements. These risks and uncertainties include, but are not limited to: (i) those relating to the interpretation of drill results, the geology, grade and continuity of mineral deposits and conclusions of economic evaluations, (ii) risks relating to possible variations in reserves, grade, planned mining dilution and ore loss, or recovery rates and changes in project parameters as plans continue to be refined, (iii) the potential for delays in exploration or development activities or the completion of feasibility studies, (iv) risks related to commodity price and foreign exchange rate fluctuations, (v) risks related to failure to obtain adequate financing on a timely basis and on acceptable terms or delays in obtaining governmental approvals or in the completion of development or construction activities, and (vi) other risks and uncertainties related to the Company's prospects, properties and business strategy. Investors are cautioned not to place undue reliance on these forward-looking statements that speak only as of the date hereof, and the Company does not undertake any obligation to revise and disseminate forward-looking statements to reflect events or circumstances after the date hereof, or to reflect the occurrence of or non-occurrence of any events.

### About Raiden Resources

**Raiden Resources Limited.** (ASX:RDN / DAX:YM4) is a dual listed base metal—gold exploration Company focused on the emerging and prolific Western Tethyan metallogenic belt in Eastern Europe, where it has established a significant exploration footprint in Serbia and Bulgaria. In 2021 Raiden completed a transaction that resulted in the acquisition of highly prospective portfolio of gold, copper, nickel and PGE projects in the Pilbara region of Western Australia.

The Directors believe that the Company is well positioned to unlock value from this exploration portfolio and deliver a significant mineral discovery.

| <b>Sampling techniques</b> | <ul style="list-style-type: none"> <li><i>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</i></li> <li><i>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</i></li> <li><i>Aspects of the determination of mineralisation that are Material to the Public Report.</i></li> <li><i>In cases where ‘industry standard’ work has been done this would be relatively simple (eg ‘reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay’). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</i></li> </ul> | <ul style="list-style-type: none"> <li>The deposits and prospects have been drilled using Rotary Air Blast (RAB), Air Core (AC), Reverse Circulation (RC) and Diamond drilling over numerous campaigns by several companies and currently by Raiden Resources Ltd. Hole spacing from previous drilling has varied according to company and purpose of drilling. Likewise, the dip and azimuth has varied.</li> <li>Sample procedures followed by historic operators are assumed to be in line with industry standards at the time. Current QAQC protocols include the analysis of field duplicates and the insertion of appropriate commercial standards and blank samples. Based on statistical analysis of these results, there is no evidence to suggest the samples are not representative.</li> <li>Where diamond drilling was undertaken ½ HQ3 or NQ2 core was sampled, while for duplicate samples ¼ core was sampled, and samples analysed at ALS Geochemical laboratory in Perth.</li> </ul> |

All samples were collected in the field at the project site in number-coded calico bags/secure labelled polyweave sacks by Raiden's geological and field personnel. All samples were delivered directly to the associated carrier, RGR Road Haulage, by Raiden personnel before being transported to the ALS laboratory in Perth WA for final analysis.</li> </ul> |

|          |                       | <p>inform Raiden's Exploration Target modelling over the Mt Sholl deposits (ASX:RDN 17 November 2021 Large Ni-Cu-Co-PGE Sulphide 'Exploration Target' Defined at Mt Sholl)</p> <p><u><sup>1</sup>Nickel Equivalent (Ni Eq) Formula</u></p> <p>Ni_Eq values were calculated from the estimated element grades and assumed commodity prices (in body of the announcement above) along with element recoveries based on historic flotation processes at Radio Hill, limited metallurgical test work, including recovery information, completed on B2 by MetPlant Engineering Services Pty Ltd as part of the Fox Resources Ltd. Feasibility Study on the B2 deposit completed in 2007, and similar Ni-Cu_Co_PGE projects producing two concentrates from flotation such as the recoveries of Cu-Ni-Co-Zn-Pd-Pt-Au from the PolyMet Mining Corp. layered mafic NorthMet Deposit located in northern Minnesota. It is the Company's opinion that all the elements included in the metal equivalents calculation have a reasonable potential to be recovered. However, it is noted that at this stage the company has only limited mineralogical and metallurgical data on the mineralisation at Mt Scholl and gathering samples for additional test work will be a priority of the initial drilling program that is the subject of this announcement.</p> <p>Recovery assumptions used:</p> <p>Nickel recovery = 0.71%</p> <p>Copper recovery = 0.90%</p> <p>Cobalt recovery = 0.36%</p> <p>Silver recovery = 0.60%</p> <p>Gold recovery = 0.73%</p> <p>Palladium recovery = 0.83%</p> <p>Platinum recovery = 0.85%</p> |
