

OMNIA ENTERS AGREEMENT TO ACQUIRE BELT-SCALE (540 km²) LITHIUM EXPLORATION OPPORTUNITY IN JAMES BAY REGION, QUEBEC (CANADA)

Omnia Metals Group Ltd (“Omnia” or the “Company”) is pleased to announce that it has increased its exposure to the future metals sector by entering into an earn-in agreement pursuant to which the Company has the option to acquire up to a 100% interest in 540 km² of granted claims in the James Bay region, Quebec, Canada. The belt-scale land package is considered highly prospective for lithium, gold and base metal mineralisation as defined by the Ministère des Ressources Naturelles et des Forêts (MERN).

PROJECT HIGHLIGHTS

- Omnia has the option to earn-in up to a 100% interest of the rights to the Lac des Montagnes Project (the “Project”), which consists of three highly prospective properties:
 - Property 1 - Senay Lithium (136 km²)
 - Property 2 - Lac des Montagnes Lithium Central Zone (98 km²)
 - Property 3 - Lac des Montagnes Lithium East Zone (306 km²)
- The Lac des Montagnes Belt is host to Namaska Lithium’s (TSXV: NMX) world class Wabouchi lithium deposit (36.7Mt @ 1.16% Li₂O) which is located 38 km along strike from the Project.
- Numerous pegmatite granites, that have been highlighted by MERN for their spodumene hosted lithium potential, are situated within the tenement package.
- Recently released mapping and prospectivity analysis over the Project area, completed by MERN, identified a new lithodemic unit termed the “Spodumene Suite” which comprises white spodumene-muscovite-garnet-tourmaline ± beryl ± apatite ± lepidolite ± petalite pegmatite intrusions that intrude into amphibolitised units of the Lac des Montagnes Group, the focus of Omnia’s acquisition.
- **Over forty (40) pegmatite granites have been mapped within the Project area, seven (7) of which have been identified by MERN as a high priority and highly prospective for spodumene hosted lithium deposits.**
- In addition to lithium prospectivity, MERN has identified multiple areas within the Project considered highly prospective for gold, nickel and zinc-lead mineralisation.
- Canadian Mining House (“CMH” or the “Vendor”) secured first-mover advantage in the Lac des Montagnes Belt and have a strong track record of project generation with recent success vending lithium projects into publicly listed companies such as ASX:CY5 and ASX:LLI.

Omnia Metals' Executive Director, James Warren, commented:

"We believe that the proposed acquisition of this high-quality exploration portfolio is a real coup for the Company and positions us to be a global leader in the exploration for future-facing commodities, with a significant land holding in one of the most prominent regions of Canada, James Bay. The recently released geological data from the Ministère des Ressources Naturelles et des Forêts has identified a highly prospective belt for not only lithium, but gold and base metals as well, so we are extremely pleased to have successfully bid on this exciting belt-scale play in a tier-1 jurisdiction."

"Canadian Mining House have done an excellent job in securing the most prospective parts of the Lac des Montagnes Belt and we look forward to becoming a significant player in one of the most exciting and evolving exploration jurisdictions in the world. I believe the Company has a fantastic opportunity to make a major discovery and our shareholders are poised to significantly benefit from the exposure to the North American battery metals market, which is seeing billions of dollars of investment as the United States and Canada seek to build an energy-independent future."

"This acquisition marks the start of a very exciting year for the Company and we're looking forward to rapidly advancing the Lac des Montagnes Project, with on-ground exploration to begin immediately at the end of the Canadian winter."

The Lac des Montagnes Project

Figure 1: Location of the Lac des Montagnes Project, Quebec, Canada.

The Lac des Montagnes Project is situated within the rapidly emerging James Bay region, Québec, Canada (Figure 1). Québec is a highly attractive investment destination for lithium exploration and production due to its supportive resource development sector, access to skilled labour and its proximity to high-growth electric vehicle markets in North America and Europe. Additionally, through its recently announced Critical Minerals Strategy, the Canadian government is committed to becoming the global supplier of choice for sustainably and responsibly sourced critical minerals, such as lithium. The Project is well serviced by key infrastructure and is accessed via the all-weather Route du Nord and a network of roads that service the Hydro-Québec power stations in the region. The Project is situated within the Eeyou Istchee, a Québec territory governed by the Cree Nations people.

The Project consists of 1,030 granted mineral claims covering 540 km² of the Lac des Montagnes Belt, an Archean aged greenstone belt situated in Canada's Superior Province (Schedule 2). The Lac des Montagnes Belt has long been recognised as a prospective lithium corridor with the presence of spodumene deposits known in the region since the Quebec geological survey completed mapping work in 1962 (Valiquette, 1963).

The Lac des Montagnes Belt is host to Namaska Lithium's (TSXV: NMX) world class Wabouchi lithium deposit (36.7Mt @ 1.16% Li₂O) which is located 38 km along strike from the Project. Recently, MERN released a new 1:50,000 scale geological map of the Lac des Montagnes region which has defined several new stratigraphic units and sub-units and led to significantly enhanced understanding of the economic geology of the belt (Bandyayera, 2022) (Figure 2). Prospectivity analysis, for a variety of commodities was completed as part of the process with prospective areas for lithium, gold and base metal mineralisation identified (Figures 3 & 4).

A key outcome of the mapping and prospectivity analysis was the identification of a new lithodemic unit termed the "Spodumene Suite". MERN geologists describe the Spodumene Suite as such: the Spodumene Suite comprises white spodumene-muscovite-garnet-tourmaline ± beryl ± apatite ± lepidolite ± petalite pegmatite intrusions that intrude into amphibolitised rock units of the Lac des Montagnes Group. The edges of these intrusions are generally deformed and sheared, suggesting syn-tectonic to late-tectonic emplacement with an age of 2577 ± 13 Ma (Beland, 2011). The metric to hectometric dykes are generally oriented NE-SW with a steep dip varying from 60° to 80°. Where observed, spodumene is disseminated in the pegmatite with a concentration varying from 2 to 15%, locally reaching 40%. The size of the crystals generally varies from 1 to 10 cm, but can locally reach 55 cm (Bandyayera, 2019).

Over forty (40) occurrences of pegmatite granite have been mapped within the Project area, seven (7) of which have been identified by MERN as the highly prospective Spodumene Suite (Figure 3 & Schedule 3). In addition to lithium prospectivity, MERN has identified multiple areas within the Project considered highly prospective for gold, nickel and zinc-lead mineralisation (Figure 4).

Please refer to Schedule 4 for the relevant Table 1 (JORC Code, 2012 Edition).

The Company continues to complete a thorough internal geological review of all available data and believes the chance of discovery success in the Lac des Montagnes Project is high for spodumene hosted lithium mineralisation, specifically, as well as gold and base metal mineralisation. Omnia plans to focus initial exploration efforts on the lithium potential of the Project, with the maiden exploration program to focus on mapping and sampling identified pegmatite granites to test for the existence of potential lithium mineralisation. Following systematic testing of the pegmatite granites, any identified mineralisation will be followed up with drill testing in due course. Omnia aims to become a leading explorer for future-facing commodities considered essential to the global energy transition and believes this belt scale exploration opportunity will complement its current belt-scale Ni-Cu exploration assets.

Note: the presence of pegmatite, pegmatite granite or visual spodumene does not equate to lithium mineralisation. The Company plans to undertake field work to test for potential lithium mineralisation and laboratory analysis of rock chip samples is required to determine if the mapped pegmatites and pegmatite granites have the potential to host mineralisation.

About Omnia

Omnia Metals Group Ltd (ASX:OM1) goal is to become a leader in the exploration, and development, of future facing commodities used in advanced technologies and essential to the global energy transition.

Omnia continues to progress its highly prospective Ord Basin Project through extensive approval process in consultation with the local Native Title groups and relevant stakeholders. The Ord Basin Project consists of 1,305km² of tenure situated in an emerging district prospective for Norilsk-style nickel-copper-PGE and stratigraphic copper mineral systems. Due to the impact of the extensive flooding in the Kimberley region (which does not materially impact the Company's intentions with respect to the Projects), Omnia expects further delays in conducting on-ground exploration at the Ord Basin Project. The Company will continue to monitor the situation over the coming weeks and months and will update the market as more information comes to light.

The Salt Creek Project covers an area of approximately 223km² and is prospective for copper, nickel and gold mineral systems. The Company is currently completing a 9,000m drilling program at the Salt Creek Project targeting gold and nickel-copper mineralisation.

Omnia reaffirms its commitment to complete the exploration programs as outlined in the Company Prospectus.

| Criteria | JORC Code explanation | Commentary |
|------------------------------|---|--|
| <i>Sampling techniques</i> | <ul style="list-style-type: none"> <i>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</i> <i>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</i> <i>Aspects of the determination of mineralisation that are Material to the Public Report.</i> <i>In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</i> | <ul style="list-style-type: none"> No sampling completed by the Company. Work pertaining to the release has involved geological interpretation of publicly available datasets which are available through sigeom.mines.gouv.qc.ca Ministère des Ressources naturelles et des Forêts (MERN), the Quebec geological survey, has completed mapping with rock types descriptions made publicly available. Sample locations are outlined in Schedule 3. No assay data is available for MERN rock samples referred to in the body of the text.
