

# Maiden drilling program commences at the niobium-rich Karloning REE Project, WA

**2,000m RC drilling program underway at the high-grade Karloning Rare Earth Project, representing the first drilling to focus on the REE and niobium potential in the district.**

## Highlights

- Three key exploration datasets collected at the recently secured **Karloning Rare Earth Element (REE) Project**, located in WA's Wheatbelt, 260km north-east of Perth – soil sampling, drone magnetics and ground radiometric surveys.
- The data collected has guided the planning of the Company's maiden ~2,000m Reverse Circulation (RC) drill program, which has now commenced.
- Drilling aimed at determining the extent of the pegmatite, its broader geological setting and understanding the zonation and distribution of the high-grade, high-value permanent magnet rare earths **dysprosium, neodymium, terbium and praseodymium** hosted in *xenotime* (*a phosphate mineral rich in heavy rare earths*).
- Drilling will also test for pegmatite-hosted **niobium**, a critical metal used in the steel industry with applications including wind turbines and high-performance batteries, first identified by the Company in the rock sampling completed in late 2022<sup>1</sup>.
- Previously reported assays from the 2022 grab sampling program returned some outstanding high grades including<sup>1</sup>:
  - **28,463ppm (2.85%) dysprosium oxide (Dy<sub>2</sub>O<sub>3</sub>)**
  - **64,100ppm (6.41%) niobium**
  - **186,000ppm (18.60%) tantalum**
  - **3,516ppm (0.35%) Terbium Oxide (Tb<sub>4</sub>O<sub>7</sub>)**
  - **2,659ppm (0.27%) Neodymium Oxide (Nd<sub>2</sub>O<sub>3</sub>)**
  - **235ppm Praseodymium Oxide (Pr<sub>6</sub>O<sub>11</sub>)**
- The Karloning Project represents an excellent opportunity for Codrus to diversify into the critical minerals space and build on its current gold and copper assets by securing exposure to a commodity sector with outstanding fundamentals and a strong growth outlook.

1: See ASX announcement, 9<sup>th</sup> December 2022.

Codrus Minerals (ASX: **CDR**, **Codrus** or **the Company**) is pleased to advise that it has commenced its maiden drilling program at the recently acquired **Karloning REE-Niobium Project** in WA. The drilling is aimed at confirming the project's credentials as an exciting growth and diversification opportunity for Codrus in the rare earths sector.

In November 2022, Codrus entered into a farm-in and joint venture agreement with Talgomine Minerals Pty Ltd (Talgomine) to earn up to a 90% interest in the Karloning Project, which is located in Western Australia's Wheatbelt region (see Figure 1) (see ASX announcement "Codrus Secures Large-Scale Niobium-Rich REE Project in WA", 23rd November 2022).

The Project offers compelling exploration potential for the high-value Rare Earth Elements (REE's) used in the manufacture of high-strength permanent magnets – namely praseodymium, neodymium, terbium and dysprosium.

These elements are in high demand because of the explosive growth in industries that rely on permanent rare earth magnets, such as electric vehicles, wind turbines and other renewable energy applications.

Figure 1. Location of the Karloning REE Project in Western Australia's Wheatbelt.

**Codrus Managing Director, Shannan Bamforth, said:**

*"We are pleased to announce the start of our first-ever drill campaign at the recently acquired Karloning Project.*

*"The careful planning and targeting of this program reflects the excellent work completed by the team in the first quarter of this year, including soil sampling, drone magnetics and ground radiometric surveys.*

*"The robust datasets generated have been used to refine the location of the drill-holes, which will determine the extent of the pegmatite at Karloning and its broader geological setting while also providing important information on the zonation and distribution of the high-grade, high-value permanent magnet rare earths within the mineralised system.*

*"The initial program should also give us some indication of the extent of the pegmatite-hosted niobium mineralisation at the project, which could further enhance the suite of critical minerals at Karloning .*

*"This is an exciting time for our shareholders, as we work to unlock the full potential of this exciting and well-located critical minerals project in the heart of the WA Wheatbelt."*

## The Karloning Project

The Karloning Project can be easily accessed by sealed roads via the town of Mukinbudin.

The geology within the tenements (E70/5339 and E70/6306) comprises mainly medium-to-coarse grained biotite granite and adamellite with a large quartz-microcline pegmatite, known as the Karloning Pegmatite (see Figure 2).

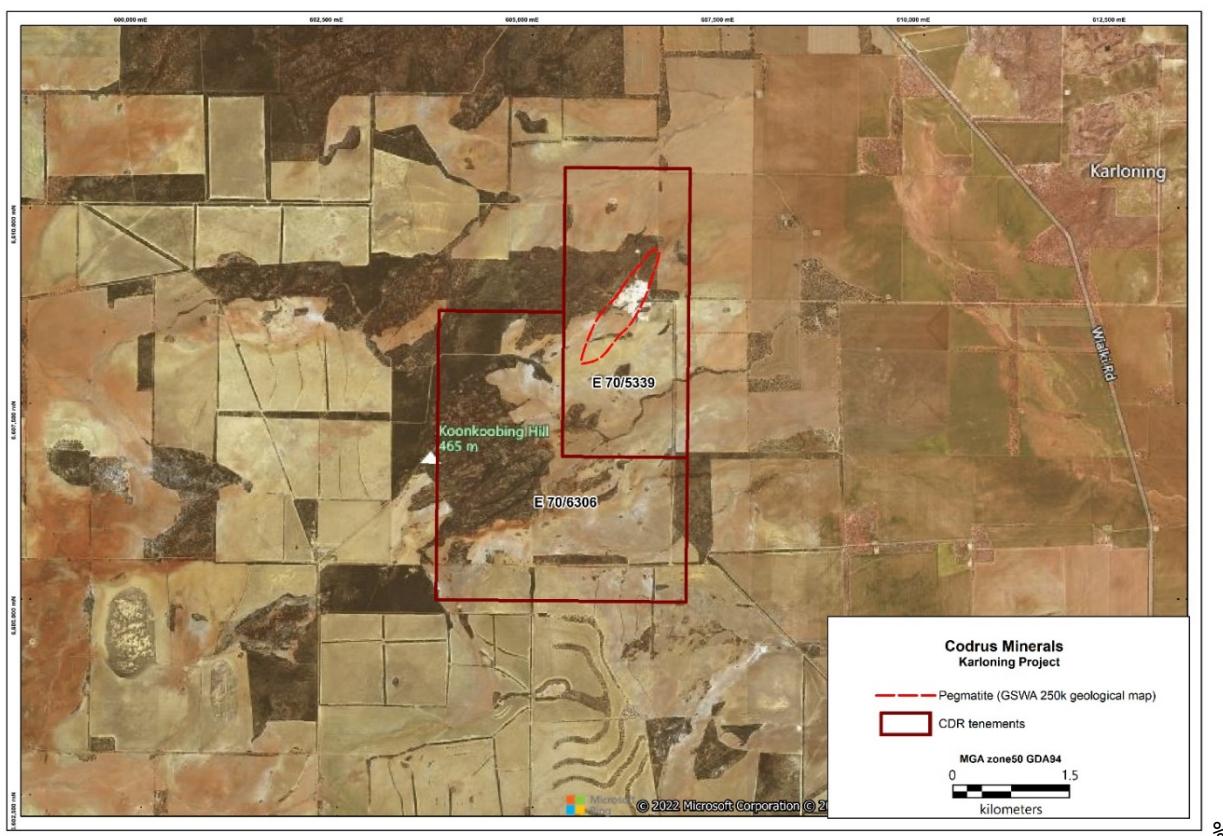

Figure 2. Karloning Project location showing the location of E70/5339 (Talgomine Joint Venture CDR earning in), and E70/6306 (100% Codrus), with the historic quarry visible in E70/5339.

Tertiary lateritic duricrusts skirt the granite outcrops and are eroded by the Quaternary paleo drainages forming broad sheetwash areas consisting of sands, clays and silts.

Mapping by the Geological Survey of Western Australia (1:250,000 Perth map sheet) shows a strike extent of ~1.5km for the Karloning Pegmatite, and Codrus believes there is a potential significant extension to the pegmatite beneath cover and for multiple pegmatite horizons to be discovered within the project area. There may also be the opportunity to identify broader zones of lower grade REE mineralisation in the widespread alkaline granite.

## Soil Sampling

A systematic soils sampling program was undertaken over preliminary areas of interest and covered a significant amount of the project tenure. This first-pass program comprised 320 samples on a nominal 100m x 100m grid, with an additional 289 in-fill samples collected on 50 m x 50m and 25m x 25m grids over priority areas.

This new soil sampling work successfully shows strong Rare Earth Element and associated element anomaly (peaking at 896ppm total rare earths and yttrium (TREY) over the mapped niobium yttrium fluorine (NYF) pegmatite at Karloning, along with a strong halo flanking the pegmatite to the north-west (see Figure 3). This lower grade TREY anomalism associated with the host alkaline granite system may form a substantial secondary target zone within the project.

The entire TREY-in-soil anomaly associated with the Karloning Pegmatite is c.2-2.5km long and the mapped pegmatite represents a priority REE drill target. The new soil sampling also shows the presence of three high priority geochemical targets along trend and south of the Karloning Pegmatite within Codrus' tenure.

At the new southern anomalies, the TREY-in-soil anomalism peaks at 1,101ppm. Follow-up sampling is being conducted to evaluate the new TREY soil anomalies and potentially advance them to drill target status.

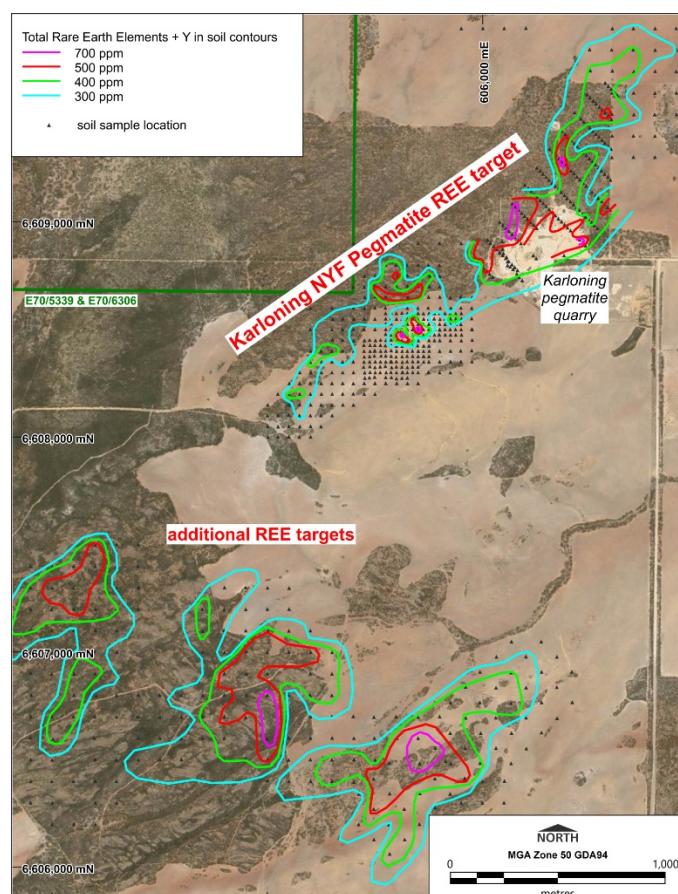

Figure 3. Karloning Project showing the main pegmatite in the quarry and potential extensions with soil geochemistry.

## Drone Magnetics

The acquisition of drone magnetic data was completed with flight lines flown at 100m spacings across the majority of the tenure, and in-fill undertaken at 25m line spacing over discrete areas of interest.

The data has now been processed and inversion modelling indicates magnetic stratigraphy dips steeply south-southeast. The mapped Karloning Pegmatite and associated TREY soil anomaly is observed to correlate closely with a significant north-northeast trending magnetic low (being largely free of magnetic minerals) (see Figure 4), and interpretation suggests several potential extensions to the known Karloning Pegmatite for follow-up mapping and geochemical sampling.

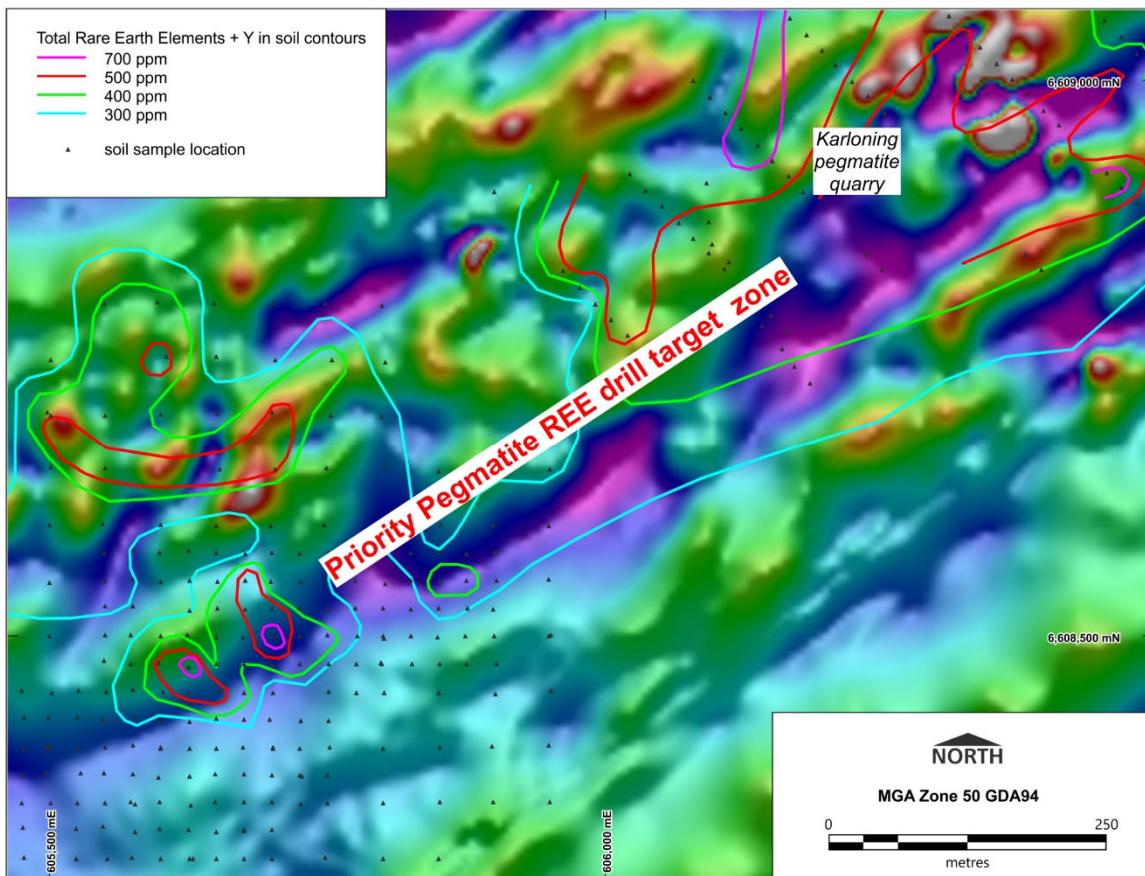

Figure 4. Karloning Project showing the TREY soil anomalm and TMI1VD magnetic image.

## Ground Radiometrics

The ground radiometric samples were collected at broadly the same locations as the soil samples. The data has been processed and shows a strong correlation with the mapped Karloning Pegmatite, highlighting in particular the south-east of the Karloning quarry as a priority target. The radiometric data also correlates strongly with and confirms prospectivity of the additional TREY-in-soil anomalies for REE mineralisation.

## Drilling Program

The maiden drilling program, which commenced in April 2023, has been designed to define the footprint of the known fertile pegmatite and will test for the presence of mineralisation at priority areas identified from the soil sampling, ground radiometrics and drone magnetic data.

The first drill program will comprise approximately 2,000m of RC drilling, with drill holes planned up to two hundred metres depth. Notably, this will be the first drilling to test the scale of the Karloning Pegmatite and the distribution of REE and niobium mineralisation. Additional areas of soil sampling and mapping will be completed during the program to assist with further drill targeting at the project in areas of interest, highlighted by the datasets collected earlier in the year.

### Priority Areas

Drilling will focus on areas of anomalousity extending away from the known quarry area where outcropping xenotime has been mapped and sampled. The key response being tested in the current program is Thorium anomalousity that coincides with a magnetic low to the south-west of the quarry.

### Future Work

The drilling at Karloning is anticipated to be completed by the end of April with assays to be returned in June. Further drilling at the project may be triggered by geology observed in the maiden drill program, and from additional mapping and sampling being completed.

### About Codrus Minerals Limited

Codrus Minerals recently secured an exciting new growth and diversification opportunity in the rare earths sector after entering into a farm-in and joint venture agreement with Talgomine Minerals Pty Ltd to earn up to a 90% interest in the Karloning Rare Earth Element (REE) Project, located in Western Australia's Wheatbelt. In addition to our REE project, Codrus has a portfolio of exciting projects in Western Australia (WA) and Oregon, United States of America (USA). All of our Australian assets are located in close proximity to existing operating mines and the Bull Run Project in the USA is located in a rich historic gold producing area. Codrus currently has four projects in WA, comprising 31 tenements with a total landholding of approximately 243km<sup>2</sup>. The Karloning REE Project in the Wheatbelt, the Silver Swan South and Red Gate Projects are in the Eastern Goldfields, whilst the Middle Creek Project is located in the Eastern Pilbara. The tenements are prospective for rare earth elements and potential economic gold mineralisation, with Silver Swan South also being prospective for Nickel. In the USA, the company holds a 100% legal and beneficial interest for 79 claims and is party to an 'Option Agreement', which covers a further 11 claims in Baker County in Eastern Oregon. In total the claims cover approximately 7km<sup>2</sup> in the Ironside Mountain Inlier. The Bull Run project is prospective for gold and has been mined intermittently since approximately 1929.

### Competent Persons Statement

The information in this report that relates to Exploration Results and Exploration Targets is based on information compiled by Mr. Shannan Bamforth who is a Member of the Australasian Institute of Mining and Metallurgy. Mr. Bamforth is a permanent employee of Codrus Minerals and has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr. Bamforth consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

The Information in this announcement that relates to previous exploration results for the Projects is extracted from the following ASX announcement:

- "Codrus Secures Large-Scale Niobium Rich REE Project in WA" 23<sup>rd</sup> November 2022
- "Codrus Confirms High Grades at Niobium-Rich REE Project" 12<sup>th</sup> December 2022
- "Exploration Update - Karloning REE Project, WA" 27<sup>th</sup> February 2023

The above announcement is available to view on the Company's website at codrusminerals.com.au. The Company confirms that it is not aware of any new information or data that materially affects the information included in the relevant original market announcements. The Company confirms that the information and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.

#### **Exploration and Resource Targets**

Any discussion in relation to the potential quantity and grade of Exploration and Resource Targets is only conceptual in nature. While Codrus is continuing exploration programs aimed at reporting additional JORC compliant Mineral Resources, there has been insufficient exploration to define mineral resources and it is uncertain if further exploration will result in the determination of maiden JORC compliant Mineral Resources.

#### **Forward-Looking Statements**

Forward-looking statements are only predictions and are subject to risks, uncertainties and assumptions which are outside the control of Codrus. There is continuing uncertainty as to the full impact of COVID-19 on Codrus's business, the Australian economy, share markets and the economies in which Codrus conducts business. Given the high degree of uncertainty surrounding the extent and duration of the COVID-19 pandemic, it is not currently possible to assess the full impact of COVID-19 on Codrus' business or the price of Codrus securities. Actual values, results or events may be materially different to those expressed or implied in this presentation. Given these uncertainties, recipients are cautioned not to place reliance on forward-looking statements. Any forward-looking statements in this presentation speak only at the date of issue of this presentation. Subject to any continuing obligations under applicable law and the ASX Listing Rules, Codrus does not undertake any obligation to update or revise any information or any of the forward-looking statements in this presentation or any changes in events, conditions or circumstances on which any such forward-looking statement is based.

## JORC Code, 2012 Edition | Table 1 report

### Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
Sampling techniques	<ul style="list-style-type: none"> <li>Nature and quality of sampling (e.g., cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</li> <li>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</li> <li>Aspects of the determination of mineralisation that are Material to the Public Report.</li> <li>In cases where 'industry standard' work has been done this would be relatively simple (e.g., 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</li> </ul>	<ul style="list-style-type: none"> <li>The REE targets reported here are based on 609 soil samples collected by Codrus Minerals personnel and 155 historic soil samples by Kinloch Resources. The Codrus soil samples were collected using hand tools to a depth of c. 30 cm and sieved to c. -3mm for submission to ALS Geochemistry, Perth ("ALS") for assay. There is no information on how the Kinloch Resources soils were collected.</li> <li>The soil samples were screened to -1.6 mm, typically weighing 200-500 g each, and placed in Minsam paper bags, and submitted to ALS Geochemistry, Perth for preparation and assay by lithium borate fusion with ICP-MS finish (ME-MS81).</li> <li>Ground Radiometric data was collected at surface.</li> <li>Drone Based Airborne Magnetic data was acquired.</li> </ul>
Drilling techniques	<ul style="list-style-type: none"> <li>Drill type (e.g., core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (e.g., core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</li> </ul>	<ul style="list-style-type: none"> <li>Not applicable – no drilling being reported.</li> </ul>
Drill sample recovery	<ul style="list-style-type: none"> <li>Method of recording and assessing core and chip sample recoveries and results assessed.</li> <li>Measures taken to maximise sample recovery and ensure representative nature of the samples.</li> <li>Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</li> </ul>	<ul style="list-style-type: none"> <li>Not applicable – no drilling being reported.</li> </ul>
Logging	<ul style="list-style-type: none"> <li>Whether core and chip samples have been geologically and</li> </ul>	<ul style="list-style-type: none"> <li>The Codrus Minerals soil samples were qualitatively logged and described by a suitably qualified geologist or field assistant. There is no geological logging information for the Kinloch Resources soils.</li> </ul>
	<ul style="list-style-type: none"> <li>geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</li> <li>Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.</li> <li>The total length and percentage of the relevant intersections logged.</li> </ul>	

Criteria	JORC Code explanation	Commentary
<b>Sub-sampling techniques and sample preparation</b>	<ul style="list-style-type: none"> <li>If core, whether cut or sawn and whether quarter, half or all cores taken.</li> <li>If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</li> <li>For all sample types, the nature, quality, and appropriateness of the sample preparation technique.</li> <li>Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</li> <li>Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half sampling.</li> <li>Whether sample sizes are appropriate to the grain size of the material being sampled.</li> </ul>	<ul style="list-style-type: none"> <li>Codrus Minerals' soil samples were screened to c. -3mm on site and c. 300g of the -3mm fines submitted to ALS where they were dried and pulverised to nominally 85% passing 75 microns for assay.</li> <li>Kinloch Resources soils were submitted to Genalysis, Perth and Acme Labs, Vancouver for assay but there is no information on preparation techniques.</li> <li>Soil sample preparation follows industry standard best-practice. Samples were dried, crushed (&lt;2mm), and rotary divided where required. Pulverisation was done by LM1 mill, and bowls were barren-washed after each sample.</li> <li>A field duplicate sample was collected after the 25<sup>th</sup> sample point.</li> <li>Screened sample sizes (-1.6mm) of 200-500 g are considered appropriate for the style of mineralisation.</li> </ul>
<b>Quality of assay data and laboratory tests</b>	<ul style="list-style-type: none"> <li>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</li> <li>For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</li> <li>Nature of quality control procedures adopted (e.g., standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (i.e., lack of bias) and precision have been established.</li> </ul>	<ul style="list-style-type: none"> <li>Codrus Minerals soil samples were assayed for a broad suite of elements including the REEs and Y by a lithium metaborate fusion with acid digestion and ICPMS finish at ALS (method ME-MS81).</li> <li>Kinloch Resources soil samples were assayed for the REEs and Y at Genalysis, Perth by sodium peroxide fusion with acid digest and ICPMS finish, and Acme Labs, Vancouver using lithium metaborate fusion with ICPMS finish.</li> <li>Codrus Minerals included commercially certified reference materials in the soil sample submissions to ALS at a rate of c. one in 25 samples. Greater than 90% of the commercial standards reported 10% of the certified values for REE and Y, with the exception of one commercial standard that under reported 12-20% for Gd.</li> <li>Codrus Minerals personnel collected field duplicates at a rate of c. one duplicate per 25 soil samples and indicate good site repeatability.</li> <li>It is not known what quality control procedures were undertaken for the historic soil sampling.</li> <li>At ALS Perth the soil samples were oven dried at 60° C, pulverised to P85 -75 microns, and assayed by ALS Perth's ME-MS81 method, with ICP-MS finish.</li> <li>One commercial reference standard was included in the submission between every 25th sample; the laboratory also utilized internal standards.</li> </ul>
<b>Verification of sampling and assaying</b>	<ul style="list-style-type: none"> <li>The verification of significant intersections by either independent or alternative company personnel.</li> <li>The use of twinned holes.</li> <li>Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</li> <li>Discuss any adjustment to assay data.</li> </ul>	<ul style="list-style-type: none"> <li>Sampling and data processing were conducted by suitably qualified Codrus Minerals field technicians and verified by Codrus Minerals geologists.</li> <li>No drilling is being reported, the use of twinned holes is not applicable.</li> <li>Primary data is stored and documented in industry standard ways.</li> <li>Codrus Minerals assay data is as reported by ALS and has not been adjusted in any way. Remnant assay pulps are currently held in storage by ALS.</li> </ul>

Criteria	JORC Code explanation	Commentary
<b>Location of data points</b>	<ul style="list-style-type: none"> <li>Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</li> <li>Specification of the grid system used.</li> <li>Quality and adequacy of topographic control.</li> </ul>	<ul style="list-style-type: none"> <li>Measurement points were located with a handheld GPS with an accuracy of +/- 5 metres.</li> <li>All coordinates and maps presented here are in the MGA Zone 50 GDA94 system.</li> <li>Topographic control is provided by government 250,000 topographic map sheets.</li> </ul>
<b>Data spacing and distribution</b>	<ul style="list-style-type: none"> <li>Data spacing for reporting of Exploration Results.</li> <li>Whether the data spacing, and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</li> <li>Whether sample compositing has been applied.</li> </ul>	<ul style="list-style-type: none"> <li>Codrus Minerals soil samples were collected on a c. 100x100m grid with infill sampling on 50x50m and 25x25m grids over priority target areas as shown in the accompanying figures.</li> <li>Kinloch Resources soil samples were collected on 20m spacing along lines 100m apart as shown in the accompanying figures.</li> <li>The soil sampling data is in no way sufficient to establish mineral resources.</li> <li>Sample compositing has not been applied.</li> <li>The soil sampling was a methodology used (together with ground radiometric and UAV-flown magnetics) to delimit the best area to drill and verify the presence and nature of rare earth element mineralisation within the Karloning Pegmatite system and cannot be considered representative of in situ grades or in any way suitable for resource estimation.</li> <li>Not applicable</li> </ul>
<b>Orientation of data in relation to geological structure</b>	<ul style="list-style-type: none"> <li>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</li> <li>If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.</li> </ul>	<ul style="list-style-type: none"> <li>The soil samples were taken from a square grid, initially at 100 x 100m spacing and then infills at 50x50 m and 25 x 25m in areas that were deemed a priority area. Sample grids are planned to be orthogonal to mineralized trends, but they are poorly understood at this time.</li> <li>All grids for Ground Radiometrics, and Drone Magnetics were flown with the aim of being orthogonal to the geology, but geological controls at this time are not well understood.</li> <li>Not applicable.</li> </ul>
<b>Sample security</b>	<ul style="list-style-type: none"> <li>The measures taken to ensure sample security.</li> </ul>	<ul style="list-style-type: none"> <li>The chain of custody for all Codrus Minerals samples from collection to dispatch to assay laboratory was managed by Codrus Minerals personnel. Sample numbers are unique and do not include any locational information useful to non-Codrus Minerals personnel. The level of security is considered appropriate for such reconnaissance sampling.</li> <li>Historic Kinloch Resources soil sample security procedures are not known.</li> </ul>
<b>Audits or reviews</b>	<ul style="list-style-type: none"> <li>The results of any audits or reviews of sampling techniques and data.</li> </ul>	<ul style="list-style-type: none"> <li>The soil assay results agree well with the observed materials and known REE mineralisation such as the Karloning pegmatite.</li> <li>Follow up sampling of selected targets is anticipated.QA/QC reviews were done on the Drone Magnetic data prior to being submitted for processing.</li> </ul>

Criteria	JORC Code explanation	Commentary
<b>Mineral tenement and land tenure status</b>	<ul style="list-style-type: none"> <li>Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</li> <li>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</li> </ul>	<ul style="list-style-type: none"> <li>The sampling was entirely conducted within granted exploration licenses E70/5339 (in JV with Talgomine Pty Ltd) and E70/6306 (100%).</li> <li>The tenement is in good standing, without known impediments.</li> </ul>
<b>Exploration done by other parties</b>	<ul style="list-style-type: none"> <li>Acknowledgment and appraisal of exploration by other parties.</li> </ul>	<ul style="list-style-type: none"> <li>Most of the previous owners and explorers' efforts were focused on the quarrying of feldspar and quartz from the Karloring pegmatite as aggregate products saleable to the construction industry and not relevant to the Codrus Minerals' exploration interests. Details of 20 RAB holes drilled vertically to a maximum depth of 21.3m have been collated with analysis only completed for Na2O and K2O</li> <li>Kinloch Resources completed a partial soil survey over the area (144 samples) in the 2011-2012 period and samples were analysed by ACME labs, Vancouver for REEs using a Lithium Metaborate fusion and ICP-MS finish. This work showed multiple soil anomalous zones with &gt;1000ppm TREEs over the northern part of the Karloring Pegmatite as mapped by the GSWA. Other than this work by Kinloch the Karloring Pegmatite does not appear to have been evaluated in any systematic way for REEs</li> </ul>

## Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
<b>Geology</b>	<ul style="list-style-type: none"> <li>Deposit type, geological setting, and style of mineralisation.</li> </ul>	<ul style="list-style-type: none"> <li>The tenement encompasses the Karloning Pegmatite system, an NYF type pegmatite which is typically zoned from biotite-phyric adamellite (quartz monzonite) wall rock through to graphic granite and transitioning into albite zone (with biotite veins and aplite dikes) and a quartz core; a few unidirectional solidification texture (UST) veining structures were observed in float samples. Note that the reconnaissance rock sampling results from the earlier announcement demonstrates potentially significant REE mineralization within at least the graphic granite and albite zones of the Karloning Pegmatite system.</li> </ul>
<b>Drill hole Information</b>	<ul style="list-style-type: none"> <li>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:             <ul style="list-style-type: none"> <li>easting and northing of the drill hole collar</li> <li>elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</li> <li>dip and azimuth of the hole</li> <li>down hole length and interception depth</li> <li>hole length.</li> </ul> </li> <li>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly             <ul style="list-style-type: none"> <li>explain why this is the case.</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>Not applicable – no drilling being reported.</li> </ul>
<b>Data aggregation methods</b>	<ul style="list-style-type: none"> <li>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (e.g., cutting of high grades) and cut-off grades are usually Material and should be stated.</li> <li>Where aggregate intercepts incorporate short lengths of high-grade results and longer lengths of low-grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</li> <li>The assumptions used for any reporting of metal equivalent values should be clearly stated.</li> </ul>	<ul style="list-style-type: none"> <li>None applied or considered necessary for the style of sampling undertaken.</li> <li>Not applicable.</li> <li>No metal equivalents reported.</li> </ul>

Criteria	JORC Code explanation	Commentary
<b>Relationship between mineralisation widths and intercept lengths</b>	<ul style="list-style-type: none"> <li>These relationships are particularly important in the reporting of Exploration Results.</li> <li>If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</li> <li>If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (e.g., 'down hole length, true width not known').</li> </ul>	<ul style="list-style-type: none"> <li>Not applicable – no drilling was carried out and the geometry of the pegmatite is not currently known.</li> </ul>
<b>Diagrams</b>	<ul style="list-style-type: none"> <li>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</li> </ul>	<ul style="list-style-type: none"> <li>Relevant diagrams are included in this report, no significant discovery is being reported.</li> </ul>
<b>Balanced reporting</b>	<ul style="list-style-type: none"> <li>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced avoiding misleading reporting of Exploration Results.</li> </ul>	<ul style="list-style-type: none"> <li>All Codrus Minerals and historic Kinloch Resources REE+Y soil sample results are tabulated in this report.</li> </ul>
<b>Other substantive exploration data</b>	<ul style="list-style-type: none"> <li>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</li> </ul>	<ul style="list-style-type: none"> <li>The results are considered indicative only of the mineralisation in the area.</li> <li>Geological observations are included in this report</li> <li>Ground Radiometric device details: <ul style="list-style-type: none"> <li>tripod-mounted Radiation Solutions RS-330 Portable Gamma Ray Spectrometer (with a 3"x3" NaI Crystal)</li> <li>120 second readings (on Assay Mode)</li> </ul> </li> <li>Drone Magnetic device detail: <ul style="list-style-type: none"> <li>a DJI multi-rotor UAV (Matrice 600 Pro)</li> <li>GEM Systems Inc, Potassium Vapour Magnetometer (GSMP-35UB)</li> <li>Gradient tolerance of 50,000 nT/m and 0.0002 nT sensitivity @1 Hz</li> <li>+/- 0.1 nT absolute accuracy with a 15,000-120,000 nT dynamic range</li> <li>Program reading intervals: 1 every metre.</li> <li>Heading error +/-0.005 nT between 10-80deg and 360deg full rotation around axis</li> <li>Laser altimeter, Inertial measurement unit (IMU), and GPS (0.7 meter resolution</li> <li>base station is a GSM19 Overhauser with a resolution of 0.01 nT, sensitivity of 0.022nT @1 Hz, and absolute accuracy of +/-0.1 nT</li> </ul> </li> </ul>
<b>Further work</b>	<ul style="list-style-type: none"> <li>The nature and scale of planned further work (e.g., tests for lateral extensions or depth extensions or large-scale step-out drilling).</li> <li>Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</li> </ul>	<ul style="list-style-type: none"> <li>Codrus has gained a better understanding of the REE mineralisation in the Karloning pegmatite system from the recently concluded soil sampling, ground radiometrics and UAV-flown magnetic surveys. The results are being used to plan a drilling program that has commenced to probe the identified REE bearing pegmatite mineralisation.</li> <li>Extent of the Karloning Pegmatite is currently poorly constrained and significant extension</li> </ul>

Criteria	JORC Code explanation	Commentary
		beyond the currently mapped extent may be possible. Appropriate maps and diagrams are included in this report.
