

Investor update – April 2023

Important notice and disclaimer

Lion Energy Ltd (ACN 000 753 640) (Lion or the Company) is the issuer of this presentation. The issue of this presentation is intended only for the person or entity to which it has been transmitted.

Not a disclosure document

The purpose of this presentation is to provide general information about the Company only. This presentation is not a disclosure document for the purpose of Chapter 6D of the *Corporations Act 2001* (Cth) (Corporations Act) and does not purport to include the information required of such a disclosure document. It has not been lodged with or approved by any regulatory authority, such as the Australian Securities and Investments Commission or the Australian Securities Exchange.

No New Information or Data

This announcement contains references to contingent resources and prospective resources and forecast financial information, all of which have been cross-referenced to previous market announcements by Lion. Lion confirms that it is not aware of any new information or data that materially affects the information included in the relevant market announcements. In accordance with ASX Listing Rule 5.43 the Company confirms that references to prospective resources have previously been announced (04/03/2019, 26/9/19, 13/04/2021 and 27/4/2022). The Company confirms that it is not aware of any new information or data that materially affects the information included in this announcement and that all the material assumptions and technical parameters underpinning the estimates in this announcement continue to apply and have not materially changed.

No other material authorised

The Company has not authorised any person to give any information or make any representation in connection with any proposed offer of securities. A prospective investor cannot rely upon any information or representations not contained in this presentation.

Forward-looking statements

This announcement contains "forward-looking statements". All statements other than those of historical facts included in this announcement are forward looking statements. Where a company expresses or implies an expectation or belief as to future events or results, such expectation or belief is expressed in good faith and believed to have a reasonable basis. However, forward-looking statements re subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by such forward-looking statements. Such risks include, but are not limited to, copper and other metals price volatility, currency fluctuations, increased production costs and variances in ore grade or recovery rates from those assumed in mining plans, as well as political and operational risks and governmental regulation and judicial outcomes. Neither company undertakes any obligation to release publicly any revisions to any "forward-looking" statement.

Reliance on presentation

A recipient of this presentation must make their own assessment of the matters contained herein and rely on their own investigations and judgment in making an investment in the Company. This presentation does not purport to contain all of the information a recipient of this presentation requires to make an informed decision whether to invest in the Company. Specifically, this presentation does not purport to contain all the information that investors and their professional advisers would reasonably require to make an informed assessment of the Company's assets and liabilities, financial position and performance, profits, losses and prospects.

Not a recommendation or financial advice

The information in this presentation is not a recommendation to subscribe for securities in the Company and does not constitute financial advice. Any person who intends to subscribe for securities must conduct their own investigations, assessment and analysis of the Company and its operations and prospects and must base their investment decision solely on those investigations and that assessment and analysis. Prospective investors should consult their own legal, accounting and financial advisers about an investment in the Company.

Overall investment thesis

- Lion in one of the first movers in Australia for supplying commercial scale green hydrogen to the heavy mobility sector. Setting a platform of skills, network and knowledge to be scaled up
- The recent completion of the seismic program has allowed Lion to mature a material, deep and diverse portfolio of exploration opportunities attractive to investors seeking exploration exposure
- Lion generates USD1m in revenue from oil sales, and is poised to commence green hydrogen sales next year. Lion has USD6m in cash
- Market cap approx AUD17m but Lion positioned for exposure to early green hydrogen production at a commercial scale and carried high impact oil exploration drilling.

Oil and Gas

Oil and Gas summary

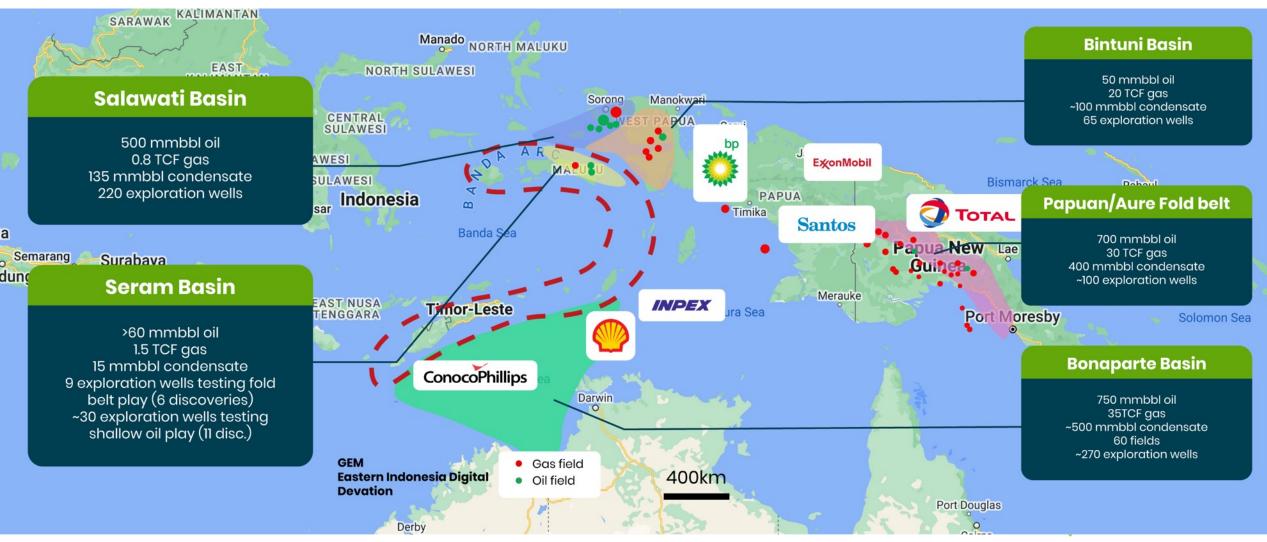

- The oil and gas business is in the best shape it has been in since 2018
- The East Seram seismic program is complete with on shore data interpretation underway. Lion has no more commitments under the PSC and is earmarked to drill a well in 2024 or relinquish/get extension.
- Seismic prog. completed on schedule, within 10% of overall budget and largely funded by our partner.
- The Seram Non-Bula JV is currently testing the Lofin gas field, one of Indonesia's largest onshore discoveries and gas rates are very promising

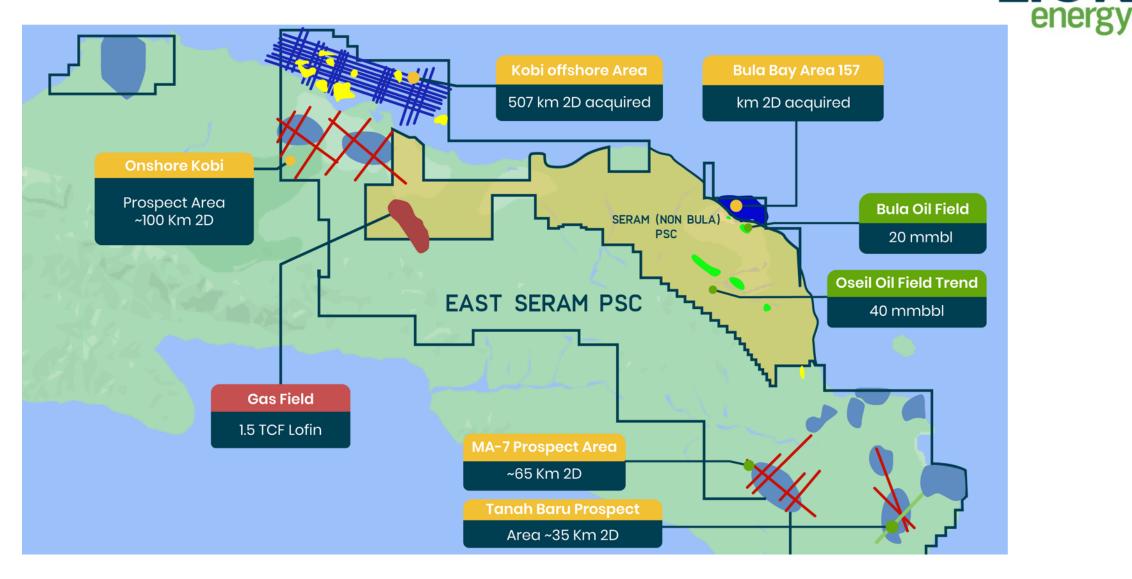

Lion's oil and gas interests are in a prolific area

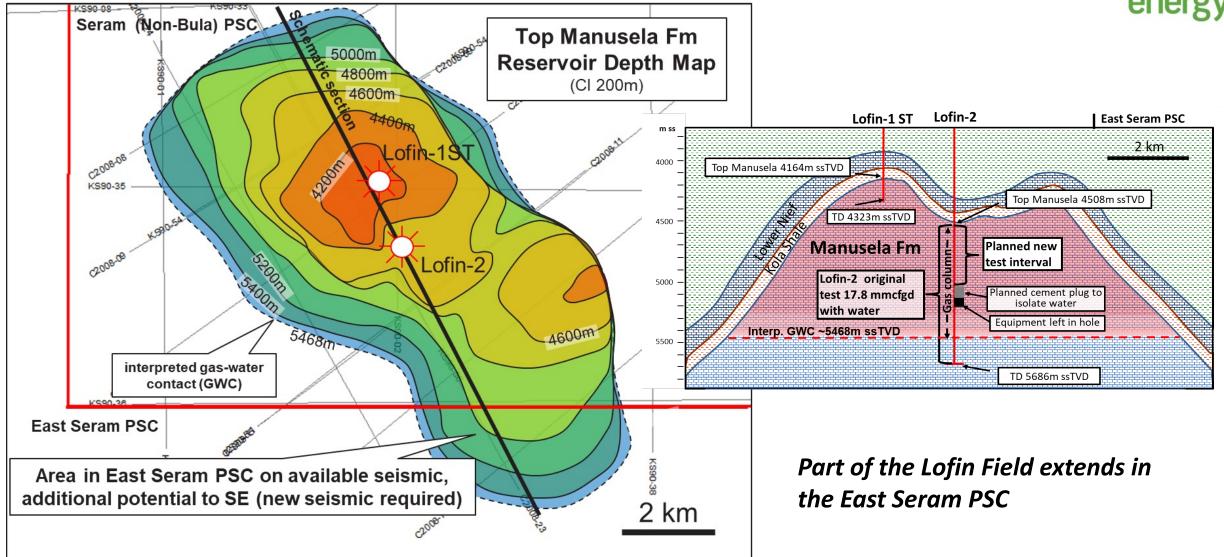

Summary of Lion's oil and gas interests

60% & Operator of East Seram PSC, 2.5% of producing Seram (NB) PSC

Lofin well test ongoing – key step to commercialisation of a 40 sq km gas field

Green Hydrogen

Green hydrogen business models in Australia

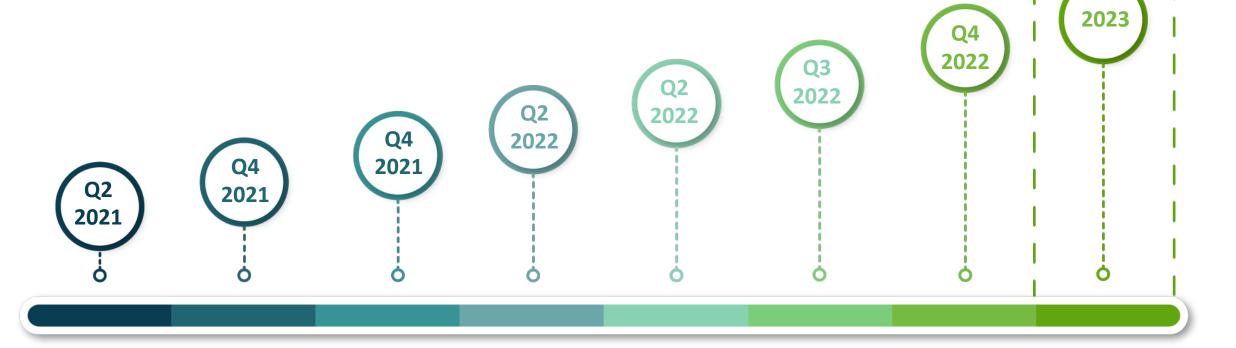

Three business models are emerging for green hydrogen in Australia

Model	Capital intensity and time to market	Considerations for Lion
Large scale production with integrated electricity production, focused on export markets	High, long	Long gestation period and uncertainty as to which projects will actually materialize
Medium scale production adjacent to an industrial user	Medium, medium	Limited number of industrial users actively looking at green hydrogen. Single customer dependency.
Small scale production targeting the domestic heavy mobility market	Low but scalable, short	Progressive scalability a good fit for Lion size

- The AUD16 billion domestic heavy mobility refuelling market is the most relevant market for Lion initially
- A subset of this market is buses (10% of the total size):
 - Strong regulatory support
 - Vehicles are readily available

The Lion journey into Green H2

GREEN H2 STUDY

- GPA study
- Established hydrogen advisory board
- Launch strategy

BUSINESS MODEL AND VISION

- GPA study
- ✓ ARRB study
- Updated strategy
- MOUs with BLK,
 Foton and Bus
 Queensland

CAPITAL RAISING

 Raised capital for hydrogen initiatives

MARKET ASSESSMENT & GEOGRAPHIC FOCUS

- QUT geospatial software
- Engaged with operators and transit authorities

FRONT END ENGINEERING DESIGN

- ✓ Wasco FEED commenced
- Equipment scoping
- ✓ Vendors approached

VENDOR SELECTION

- 3 vendors selected
- ✓ WASCO FEED completed

LOCATION SELECTION

- QUT Geospatial software
- ✓ First mover advantage
- ✓ First location

FIRST REFUELLER

- EPC selection
- Electrolyser and refueller setup
- Market hydrogen

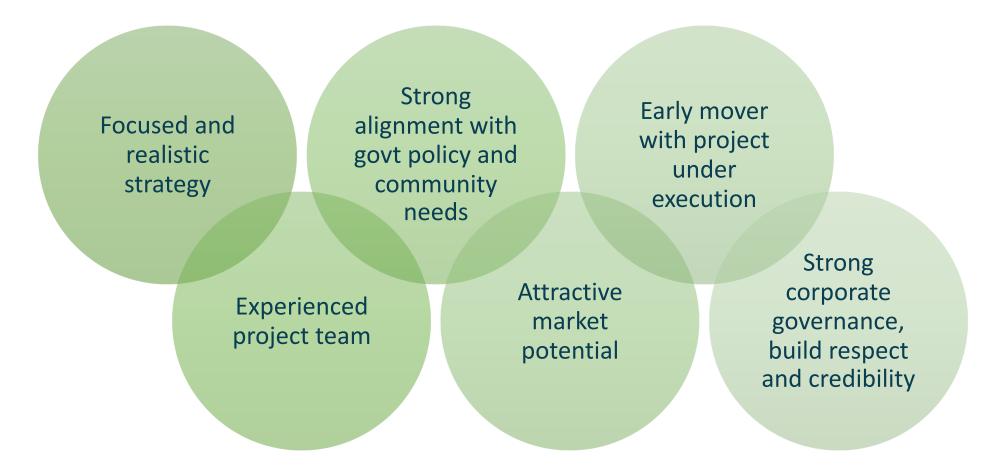

Lion's hydrogen vision

Becoming the leading independent producer and distributor of green hydrogen in Australia for the domestic mobility market.

Key investment themes

Lion's strategy - be a major H2 refuelling player in Australia

Positioning

- Solution provider for Australia's zero-emission targets commencing 2025
- Production, storage and dispensing of green hydrogen
- Focused/realistic strategy

Markets

- Back-to-base heavy mobility (buses then trucks)
- Later, other transport (lighter vehicles, trains, ships, planes)
- Complement the battery electric vehicles' rollout

Model

- Small-mid onsite production hubs, each servicing a few dispensing stations
- Demand-driven, proximity to customers
- Proven, low-cost technology

Lion's initial positioning in the value chain

Roadmap

- Establish replicable commercial business model
- Build, market and execute first location
- Start hydrogen production
- Finalize detailed rollout and funding plan for Phase 2

- Execute off-take contracts with broader customer group
- Signing EPC contract for 20 stations
- Set-up inhouse O&M team
- Build, market, execute
- Finalize detailed rollout and funding plan for Phase 3

- Replicate for an additional 30 locations
- Begin "merchant" roll-out (i.e. non-back-to-base) to other transport sectors
- Enlarge hub, consider renewables
- Optimize hydrogen production storage and infrastructure

PHASE 1 ("Initiate") 2022-2023 PHASE 2 ("Replicate") 2023-2025 PHASE 3 ("Expand")
2026 onwards

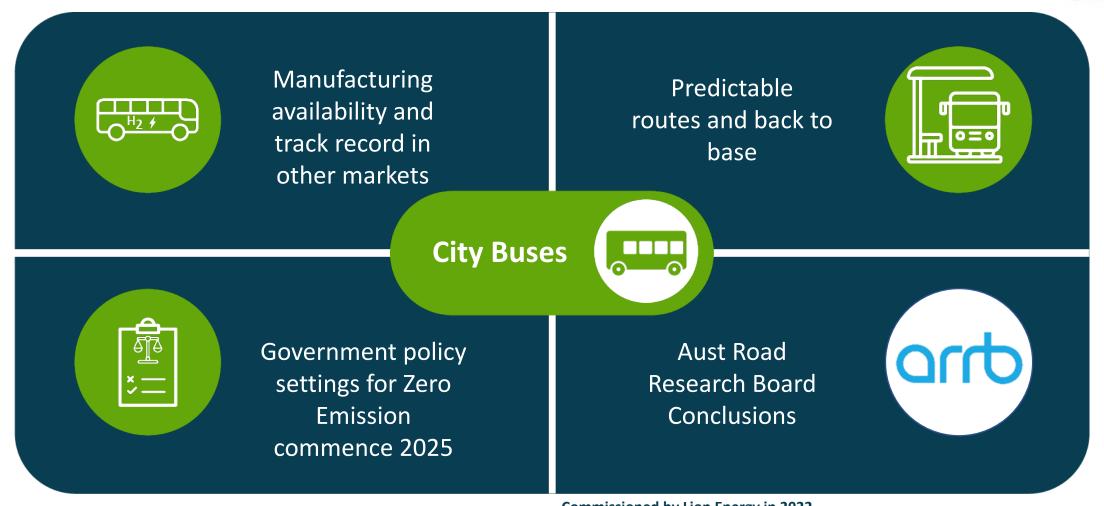

Execution philosophy

Target market: Hydrogen buses – the early adopters

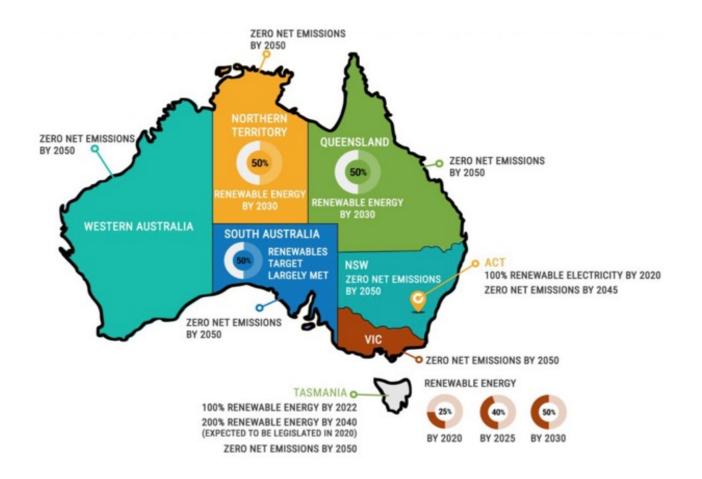

Commissioned by Lion Energy in 2022

Leading zero-emission charge led by State Governments

Regulatory-driven demand

Hydrogen refuelling stations

We estimate at least 65t/day required to meet FCEB demand

Low hanging fruit

Bus segment

Regulatory impetus Vehicle availability

Best fit for technology

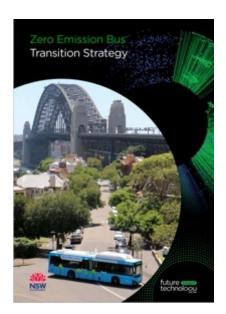

Truck segment

Lacks regulatory impetus now Phase 2 focus and bigger market

Regulatory momentum

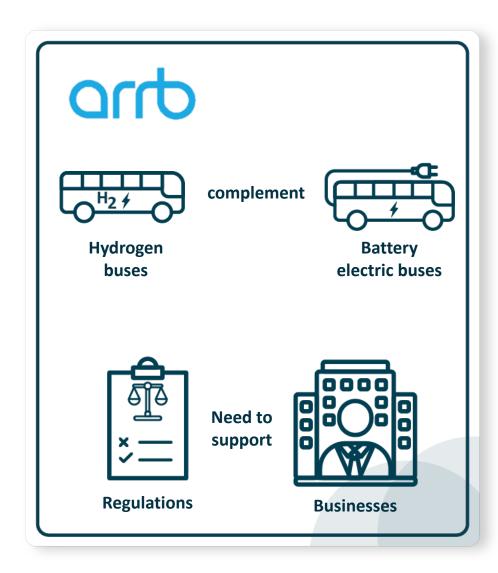

- Transport for NSW (TfNSW) plans to see its 4,100 Sydney buses fully transitioned by 2035
- Queensland Government committed that every new urban bus added to the fleet in South-East Queensland will be zero-emissions by 2025, followed by state-wide mandate by 2030.
- Victorian Government has pledged that all new bus purchases will be zero emission buses from 2025.
- The aggressive cut-off date for ZEB is driving bus fleet operators to quickly embrace battery and hydrogen technologies
- The Eastern Seaboard has regulatory settings conducive to the take up of ZEB

ARRB study confirms role of H2 buses for Australia's roll-out of zero-emission buses

Issues for Battery Electric Buses

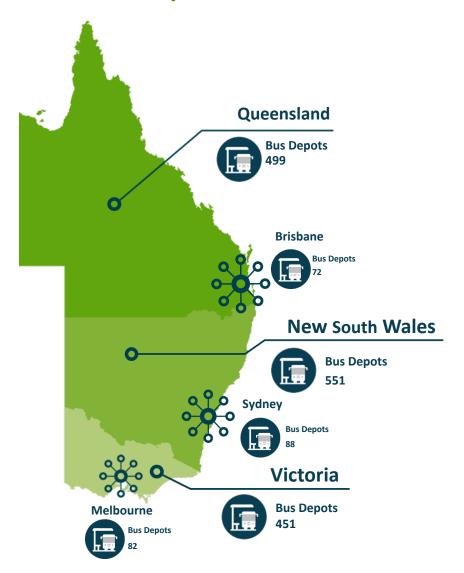

- limited depot space for charging infrastructure
- High infrastructure investments (chargers, energy storage and electricity connection/substation upgrades),
- Short range and long charging times of BEBs likely requiring additional BEBs to maintain service levels
- Disruption to operations by rollout of infrastructure

Clear role for FCEB

- Small footprint of H2 refuelling infrastructure and limited disruption to services
- Fast refuelling,
- No range restrictions comparable to current bus fleet
- **FCEB** (vehicle and gas) purchase prices will further reduce as the technology matures and production volumes increase

Fast replication to multiple locations

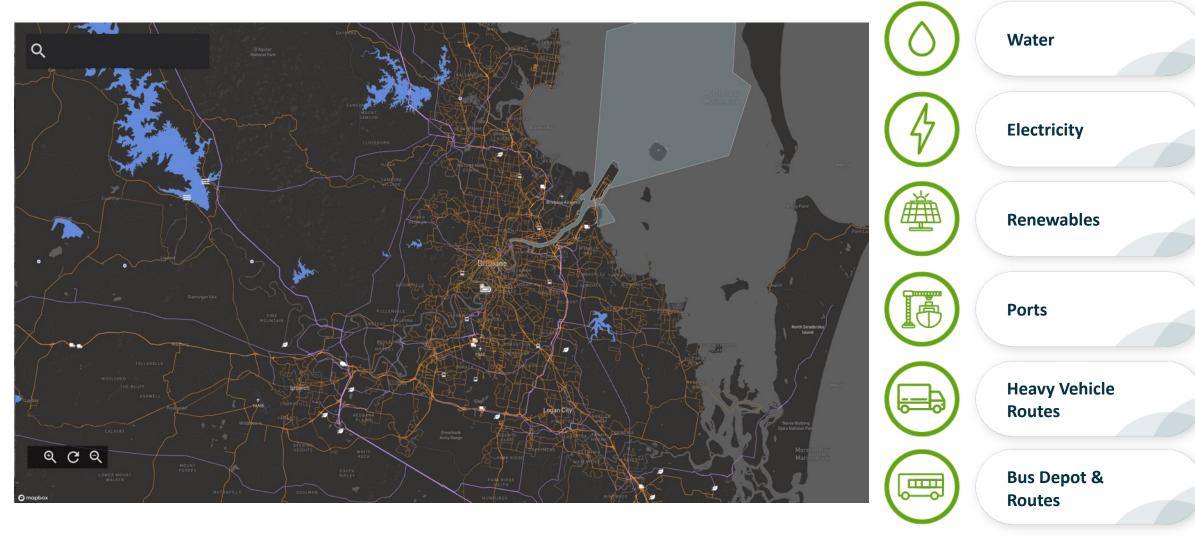

Operate a series of production hubs and up to 50 refuelling stations in Australia, with a focus on the untapped East Coast market.

There are currently no hydrogen refuelling stations for bus operations in Australia

Top 20 operators operate 300 depots with an average of 60 buses per depot

Location optimization tool

Current status

- Site selected at Port of Brisbane
- Hydrogen refuelling station equipment procured
- Electrolysers ready for signing
- Commercial offtake discussion in progress
- Development approval in progress
- First commissioning targeted for 1Q2024
- Total budget: ~A\$12m

Port of Brisbane strategically located

Project schedule
