About Asra Minerals

Asra Minerals is developing its gold, and clay hosted REE projects, located in the prime Eastern Goldfields jurisdiction of Leonora, Western Australia.

The company’s flagship project at Mt Stirling hosts both Gold and Rare Earth Element (REE) Projects - 10 advanced gold prospects as well as a unique inventory of clean, heavy-dominant (Dysprosium, Terbium) Rare Earth Elements (REE) and critical minerals (Scandium and Cobalt).

Located near the mining towns of Leonora and Kalgoorlie in Western Australia, the Mt Stirling Project has:

- 1) **Gold** - a current JORC compliant Mineral Resource of gold alongside Red 5’s (ASX; RED) King of the Hills mine. The region has recently produced approximately 14Moz of gold from mines such as Tower Hills, Sons of Gwalia, Thunderbox, Harbour Lights and Gwalia. Mt Stirling is nearby to excellent infrastructure including road, rail and mills.
- 2) **REE** - a high ratio of heavy rare earths to total rare earths (0.62 to 1) and a lack of radioactivity distinguish the company’s Yttria and Wishbone prospects which contain a high proportion of the magnet REEs dysprosium, terbium, praseodymium and neodymium, as well as significant anomalous concentrations of cobalt and scandium.
- 3) The Company also own the 172,662 Hectare **Tarmoola Pastoral Station** underlying the gold and REE deposits and infrastructure.
