

## Lithium Exploration Commences at Laforge Project - Quebec

### HIGHLIGHTS

---

- Pure Resources technical team visits Laforge Project to commence next phase of boots-on-ground exploration.
  - APEX Geoscience will complete mapping and sampling during the summer months with the aim of delineating targets for follow-up drill testing.
  - In November 2022 the team sampled just ~5% of the project where geochemical sampling identified elevated concentrations of lithium and pathfinder elements associated with the presence of LCT pegmatites (Li, Ta, Nb, Cs, Rb).
  - Multiple outcropping pegmatites have already been mapped and will provide a strong focus for the current exploration work.
  - Additionally, previous exploration identified three promising zones with granitic pegmatite lithologies in what was the first ever samples assayed for lithium at the Laforge Project.
  - The Project covers 261km<sup>2</sup> and is located 65km northeast of Patriot Battery Metals Inc (ASX:PMT) CV5 lithium discovery.
  - The Laforge Lithium Project represents a greenfields opportunity to discover a significant lithium deposit in a Tier-1 jurisdiction.
- 

Pure Resources Limited (Pure or Company) is pleased to announce the commencement of on-ground exploration at the Laforge Lithium Project (**Project**), Quebec, Canada.

The exploration program follows on from an aerial reconnaissance mapping and sampling program over the Project, that was completed late in CY-2022 (refer PR1 ASX release dated 5 January 2022).

Company personnel, Non-Executive Director, James Warren, and Exploration Manager, Kane Freeman, have been on-site to commence the summer field campaign which will be executed by APEX Geoscience over the coming months.

**Pure's Executive Chairman, Patric Glovac, commented:**

*"We're very excited to commence exploration properly on the Laforge Lithium Project that follows on from an opportunistic fieldwork campaign completed late last year. The previous field work was completed on less than 5% of Pure's 261km<sup>2</sup> landholding and the Company is looking forward to building on the previous work with the goal of generating targets for follow-up drill testing."*

*"Whilst greenfields in nature, the Laforge Lithium Project is situated in the same geological province and exhibits analogous rock types, structural setting and geophysical properties as observed at the Corvette Lithium Trend 65km to the southwest. We maintain the belief*

*that the Laforge Lithium project represents a genuine opportunity to discover a significant lithium deposit in a Tier-1 jurisdiction."*

*"Our technical team have recently visited the Project and are working closely with APEX Geoscience to unlock the Project's full potential and we look forward to keeping the market updated on results as they come to light."*

- END -

This announcement is approved for release by the Board of Pure Resources Limited.

Mr Patric Glovac  
Executive Chairman  
**Pure Resources Limited**

**About Pure Resources**

Pure's vision is to become an eminent battery metal focussed company on the ASX, either through its existing portfolio of nickel and copper assets, generation of new projects, or acquisitions of existing projects presented to the Company with a strong determination to add Lithium, Rare Earths or Graphite to the company's portfolio.

**Competent Persons Statement**

The information in this report which relates to Exploration Results is based on information compiled by Dr. James Warren, a Competent Person who is a member of the Australian Institute of Geoscientists. Dr. Warren is a Non-Executive Director of Pure Resources Limited. Dr. Warren has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the "Australian Code of Reporting of Exploration Results, Mineral Resources and Ore Reserves". Dr. Warren consents to the inclusion in this report of the matters based on the information in the form and context in which it appears.
