

ALLTYPE ENGINEERING SECURES ~\$47M COMPRESSOR STATION FACILITIES CONTRACT

AWARD OF CORE BUSINESS CONTRACT FOUNDATION FOR NATIONAL EXPANSION INTO THE EAST COAST

Highlights

- Alltype Engineering have been awarded the Kurri Kurri Facilities contract for APA Group valued at ~\$47 Million
- This major turnkey multidisciplinary project is the single largest awarded contract to Alltype Engineering in its history and leverages off the successful delivery of the Ambania Compressor Station in Western Australia
- The scope comprises two separate sites with compression and gas pipeline facilities and includes civil and earthworks, piling, concrete, SMP fabrication and construction works and E&I installation works as well as commissioning assistance

Alltype Engineering Team Experience

- Alltype Engineering's key project delivery team members have previously constructed over 40 gas compression facilities and installed numerous standalone compressor packages, including the Ambania Compressor Station earlier this year
- Alltype Engineering's project team successfully delivered the previous constructed compressor station for APA Group in Western Australia as well as reciprocating compressor stations and gas processing facilities
- Alltype Engineering have fabricated piping, structural steel and skids for compressor stations for almost 30 years

WestStar Industrial Limited (**Company** or **WestStar**) (ASX: WSI), an Australian industrial services company operating in the energy, resources, utility and infrastructure sectors, in metropolitan and remote areas, is pleased to advise its engineering construction contracting business **Alltype Engineering** has been awarded a new major contract valued at circa \$47 Million (**Contract**) by **APA Group (APA)**.

The Contract further bolsters and contributes to the WestStar FY24 order book and aligns with Alltype Engineering's strategic plan to focus and deliver on major turnkey construction projects and expand multidiscipline project and construction services into the east coast.

For Alltype Engineering, the Contract award is a result of its continued demonstrated experience in delivering projects successfully for APA Group and the oil and gas industry. Alltype Engineering will commence work immediately with works planned to be delivered in accordance with the schedule for the completion of the Hunter Power Project timeline.

Alltype Engineering Managing Director Kelvin Andrijich noted:

“Having recently successfully completed the Ambania Compressor Station, various pipeline facilities works on the NGL, GGT and DBP pipelines, we are excited to be awarded this contract for the Kurri Kurri facilities that allows our project team to continue to deliver on their core strength and competence. Having worked with APA Group for nearly 20 years in various capacities, it is great to reignite our team’s presence on the east coast of Australia to deliver a key piece of critical infrastructure as part of the Hunter Power Project. We are proud that our safe and consistent project performance for the past five years has been recognised and has been a key contributing factor to our selection as the principal facilities contractor for these works by APA Group.”

“Alltype Engineering continues to expand our market presence and capabilities by safely and reliably delivering multidisciplinary projects, particularly in remote areas. By executing the skid package workshop fabrication, SMP and E&I scopes and partnering with key experienced and aligned partners local to the project for earthworks, civil, piling, concrete and fabrication scopes, we provide a seamless end to end solution which de-risks project HSE and schedule delivery for both parties.”

Scope of Work

APA Group has contracted Alltype Engineering to deliver a new pipeline offtake and meter facility and a two-unit Electric Motor Drive (EMD) Reciprocating Gas Compressor and Delivery Station (Kurri Kurri Storage Station or KKSS) for a gas storage pipeline near Kurri Kurri, in the Hunter Valley region of New South Wales, ~35km west of Newcastle, as part of the Hunter Power Project.

The Kurri Kurri facilities project involves site establishment, earthworks, civil, piling, concrete, structural, mechanical, piping, electrical and instrumentation scopes, for both workshop (structural steel, pipe spooling and skids) and onsite construction.

-Ends-
