

Change in ASX classification to Mining Producing Entity

Catalyst Metals

Catalyst Metals controls three highly prospective gold belts. It has a multi asset strategy.

It owns the 40km long Plutonic Gold Belt in Western Australia hosting the Plutonic gold mine and neighbouring underexplored, high-grade resources.

It also owns and operates the high-grade Henty Gold Mine in Tasmania which lies within the 25km Henty gold belt. Production to date is 1.4Moz @ 8.9 g/t.

Catalyst also controls +75km of strike length immediately north of the +22Moz Bendigo goldfield and home to high-grade, greenfield resources at Four Eagles.

Catalyst Metals Limited (Company) advises that the Australian Securities Exchange has confirmed that the Company's ASX classification has been changed from a "Mining Exploration Entity" to a "Mining Producing Entity" as defined in ASX Listing Rule 19.12.

As a result of the change in classification:

- Catalyst will continue to lodge Quarterly Activities Reports but will no longer lodge Appendix 5B Quarterly Cash Flow Reports; and
- Catalyst will now lodge an Appendix 4D (Half Year Report) and an Appendix 4E (Preliminary Final Report), in each case, within two months of the end of the relevant reporting period.

This announcement has been approved for release by the Board of Directors of Catalyst Metals Limited.
