ASX ANNOUNCEMENT

Commencement of RC Drilling Program – Ravensthorpe

Highlights

- RC drilling has commenced at the Company's Ravensthorpe projects
- 3,000m Reverse Circulation (RC) drilling to completed by January 2024

Woomera Mining Limited (ASX: WML) ("Woomera", "the Company") is pleased to announce that it has commenced an RC drilling program to test pegmatites at the Company's Mt Short JV and lithium anomalies at its wholly owned Mt Cattlin Project.

The Mt Short JV, together with the 100%-owned Mt Cattlin tenement immediately to the south, comprise the Company's Ravensthorpe Li Projects and are located in lithium-prospective stratigraphy north of Allkem's Mt Cattlin Li Mine (see **Figure 1**).

Approximately 3000m of RC drilling is planned to test auger Li anomalies defined earlier this year at the 100% owned Mt Cattlin Project and follow up historic pegmatite intersections at the Mt Short JV tenure (see ASX releases dated 14 August 2023), where the Company can earn up to 70% equity from Anax Metals Limited (ASX:ANX).

The program is expected to be completed in January 2024.
