

SUVO LAUNCHES INVESTORHUB FOR IMPROVED INVESTOR ENGAGEMENT

Suvo Strategic Minerals Limited (ASX: SUV) (“Suvo” or “the Company”) is pleased to announce the formal launch of our Investor Hub. The Investor Hub is a dedicated platform for investors to learn more about the Company and its projects. This is an exciting period for Suvo as we focus on increasing sales of hydrous kaolin and generating positive cash flow from our Pittong operations. The Company also continues to progress with research and development activities related to geopolymer cement and concrete, with the goal to create a green product, using kaolin, to lower the carbon emissions emitted by these industries.

Visit the Suvo Investor Hub here: <https://investorhub.suvo.com.au/welcome>

In line with our commitment to deliver updates and insights to our investors and stakeholders, Suvo will be regularly uploading new content to the hub, including videos accompanying select announcements, education material, interviews, and corporate research.

How to join Suvo Investor Hub:

1. Visit <https://investorhub.suvo.com.au/auth/signup>.
2. Follow the prompts to sign up for an Investor Hub account.
3. Complete your account profile.

Interim Chief Executive Officer Bojan Bogunovic commented:

“We appreciate shareholder’s support during FY2023 and we look forward to updating investors on our progress in FY2024 and beyond via the Investor Hub.

It is important to the Suvo team to be transparent in our use of shareholder money and this new platform with help facilitate this. We look forward to the improved engagement with our investors.”

Approved for release by the Board.

Company Profile

Suvo Strategic Minerals Limited is an Australian hydrous kaolin producer and exploration company listed on the Australian Securities Exchange (ASX:SUV). Suvo is focused on production at, and expansion of, their 100% owned Pittong hydrous kaolin operation located 40km west of Ballarat in Victoria. Suvo's exploration focus is on near-term kaolin and high purity silica assets with 100% owned Gabbin (kaolin), Eneabba and Muchea (silica sands) projects located in Western Australia.

Pittong Operations

The 100% owned Pittong Operations, located in Victoria 40km west of Ballarat, is the sole wet kaolin mine and processing plant in Australia and has been in operation since 1972. Pittong comprises the Pittong, Trawalla and Lal Lal deposits located on approved Mining Licences MIN5408, MIN5365 and MIN5409 respectively.

At Pittong mining contractors deliver crude kaolin ore to stockpiles from the two currently operating mines, Pittong and Lal Lal. The plant takes its feedstock from the ROM and it is processed into four separate product forms for end users. These product forms are 10% moisture lump, high solids slurry, 1% moisture powder and 1% moisture pulverised powder. The solids slurry is used in paper and board manufacturing. The other products are used in paper, coatings, paint and specialist industries including rubber and pharmaceutical applications. Around 20–25kt per annum is supplied to various end users.

Gabbin Kaolin Project

The 100% owned Gabbin Kaolin Project (White Cloud) is located 215km northeast of Perth, Western Australia. The project area comprises four granted exploration licences (E70/5039, E70/5332, E70/5333, E70/5517) for 413km², centred around the town and rail siding of Gabbin. The generally flat area is primarily cleared farming land devoid of native bushland and is currently used for broad-acre cereal cropping. A mining access agreement is in place over the current resource area with the landowner and occupier.

The main rock types at Gabbin are primarily Archaean granite, gneiss, and migmatite. These rocks are overlain and obscured by Tertiary sand and Quaternary sheetwash. The weathering profile is very deep and contains thick kaolin horizons capped by mottled clays or laterite zones. The current JORC 2012 Mineral Resources are 72.5Mt of bright white kaolinised granite with an ISO Brightness of 80.5%.

Eneabba Silica Sands Project

The 100% owned Eneabba Silica Sands Project is located 300km north of Perth, Western Australia. The project comprises four granted exploration licences (E70/5001, E70/5322, E70/5323, E70/5324) for 169km². The project is located on the Eneabba Plain whose sandy cover is very flat to gently undulating. Outcrop is rare due to the accumulations of windblown and alluvial sand at surface. Below this is a thin hard silcrete or lateritic claypan which overlies deep white and yellow sands.
