Set your user with dietary concerns or allergens to highlight products to meet your preferences

## Search or Scan

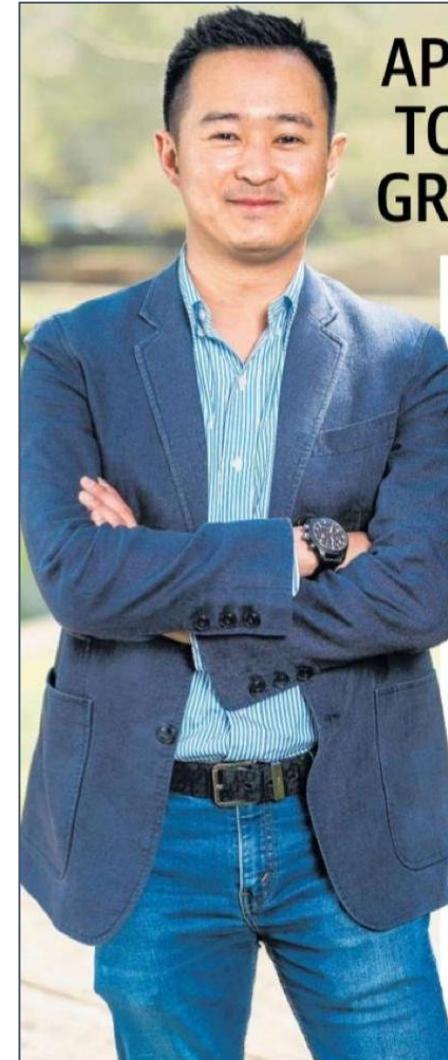

Search across over 50,000 currently available products or just scan the barcode

## Make Shopping Easier

Share the household shopping note, list for the Weekend BBQ or what's in the fridge

## APP ROPING IN AI TO STRETCH THE GROCERY BUDGET

### CHEYANNE ENCISO

Perth-based data analysis company Frugl is in the process of integrating artificial intelligence into its grocery price app in what boss Kenny Woo says will help consumers stretch their budgets further amid escalating prices.

The Australian Securities Exchange-listed company allows users to compare prices of more than 58,000 grocery products across 5266 retailers in Australia. It also provides retailers behavioural shopping data.

While Mr Woo, pictured, gave no timeline as to when AI would be fully integrated with Frugl's app, he said the tech would allow it to understand what customers were buying and how frequently, while also cross-referencing pricing movements before making suggestions.

He said the move into AI helped consumers make better purchasing decisions.

"The app will reach out to (customers) and say... 'It looks to me like you're due to buy a box of cereal in four days and from the app's understanding, it looks like the cereal will be cheaper if you bought it today,'" Mr Woo said.

"AI allows the app to make these suggestions live and dynamically.

"Stretching your dollar is very important, cost of living has gone up consistently, there's never been a period that it's gone down."

Mr Woo said Frugl hoped to give power back to its customers. On consumer sentiment, Mr Woo said customers were feeling "rather alarmed".

As of June this year, Frugl had about 60,000 new user sign-ups, which Mr Woo said was encouraging.

"It means that there is a value proposition that people are seeing," he said.

Frugl hopes to eventually offer more AI solutions in the app and engage with users more often.
