

Drilling commences at Mogumber

Highlights

- SQM Australia Pty Ltd (SQM) have confirmed that drilling has commenced on the Tambourah Mogumber project.
- Approx 185 drill holes with an estimated 9,250m is planned.
- Two Aircore drill rigs will commence on Tuesday April 16th and drilling is expected to last for 1 month prior to seeding activities.
- Drilling is designed to test a historical geochemical anomaly (Ta) from auger sampling.

Tambourah Metals Ltd (“TMB” or ‘the Company”) is pleased to announce that global lithium company Sociedad Química y Minera de Chile S.A., via its wholly owned subsidiary SQM Australia Pty Ltd (“SQM”), has commenced drilling at the Mogumber Project (E 70/6285)

Drilling is designed to test a historical geochemical anomaly (Ta) from auger sampling. The geological interpretation is all granite, however regional aerial magnetics and geochemical assessment of the auger samples suggest that several structural corridors exist plus indications that mafic-ultramafic stratigraphy might exist under cover. This presents an encouraging conceptual target. Land access agreements, heritage approval and PoW approvals all have been confirmed.

Tambourah and the Chilean lithium producer Sociedad Química y Minera de Chile S.A. (SQM) (NYSE: SQM) announced that they had entered into an agreement providing SQM with an exploration earn-in across six of Tambourah’s Julimar Nth projects in Western Australia. SQM has been granted the right to earn an initial 50% interest (and can earn a maximum of 70%) in all mineral rights at Julimar Nth project by sole funding a minimum of A\$1.5m and up to \$3m of exploration and development activities. SQM is one of the world’s leading lithium producers with its main assets in Australia being its 50% joint venture interest in the Mt. Holland Lithium Project as well as other lithium related investments and early-stage exploration. Tambourah Metals Ltd is an active explorer for gold and lithium with a significant exploration portfolio in WA.
