ASX ANNOUNCEMENT

ASX:AZS

Azure Minerals Limited (ASX: AZS) (“Azure” or “the Company”) is pleased to provide its activities report for the March quarter, during which the Company continued to progress a binding Transaction Implementation Deed while delivering significant exploration success at the Andover lithium project (Azure 60% / Creasy Group 40%), located in the West Pilbara region of Western Australia.

Commenting on the March quarter, Azure’s Managing Director Tony Rovira said:

“It has been yet another active quarter for Azure Minerals during which the Company significantly advanced the proposed Transaction with SQM and Hancock, valuing Azure at ~A\$1.7 billion on a fully diluted equity basis.

“During the period, the Company convened an Extraordinary General Meeting and Scheme Meeting to seek Azure shareholder approval of the joint bidding arrangements between the Joint Bidders and the Scheme. Additionally, Azure dispatched to shareholders a Transaction Booklet, which is a key document and which includes important information about the Scheme.

“Post period-end, I am exceptionally pleased to report that the resolutions to approve the joint bidding arrangements between the Joint Bidders and the Scheme were each passed by shareholders at the EGM and Scheme Meeting respectively. Approval from shareholders represents the satisfaction of two of the key conditions precedent for the completion of the Transaction and the Company will continue to keep shareholders informed of all material developments as the Transaction continues to progress.

“In addition, the Company has also delivered stellar exploration results in Target Areas 1 and 3. Drilling of the AP0011 pegmatite within Target Area 1 continued to yield multiple +100m intersections of mineralisation. Meanwhile, an increased focus on AP0004 and AP0002 in Target Area 3 has demonstrated the potential for these pegmatites to yield further thick, high-grade lithium intersections and remain open in all directions.

These emerging results in Target Area 3 combined with the established potential of Target Area 1 continue to affirm the Andover Project’s potential to be a lithium project of global significance.”

CORPORATE

Just prior to the commencement of the March 2024 quarter,, the Company announced it had entered into a new binding Transaction Implementation Deed with the Joint Bidders and SH Mining under which it is proposed that SH Mining will acquire 100% of the shares in Azure by way of a scheme of arrangement for a cash amount of A\$3.70 per Azure share, or if the Scheme is not successful, by way of an off-market takeover offer for a cash amount of A\$3.65 per Azure share¹ (“Transaction Implementation Deed”).

To facilitate the Transaction, SQM and Hancock entered into a joint bidding agreement governing how the joint bid would be made.

In February, the Joint Bidders confirmed all competition law approvals required under the Transaction Implementation Deed have been obtained, and accordingly that the relevant

conditions precedent set out in clause 3.1(b) and clause 1.7(b) of Schedule 2 of the Transaction Implementation Deed have been satisfied².

In March, the Company reported that the Supreme Court of Western Australia made the following orders in relation to the Scheme³:

- that a meeting of the shareholders of Azure be convened to consider and vote on the Scheme (“Scheme Meeting”); and
- that an explanatory statement which includes information about the Scheme (“Transaction Booklet”) be despatched to Azure shareholders.

The Transaction Booklet was subsequently registered with the Australian Securities & Investments Commission and despatched to shareholders⁴.

Post period-end, the Company reported the results of the EGM and Scheme Meeting, which was held on 8 April 2024, whereby shareholders passed by the requisite majorities⁵ regarding:

- the resolution to approve the proposed acquisition of 100% of the shares in Azure by SH Mining, a bid vehicle jointly owned by SQM and Hancock (through its subsidiary Hanrine Future Metals Pty Ltd), by way of the Scheme (“Scheme Resolution”); and
- the resolution to approve the Joint Bidders’ joint bidding arrangements for the purposes of item 7 of section 611 of the *Corporations Act 2001* (Cth) (“Section 611 item 7 Resolution”)

Now that the Scheme Resolution and Section 611 Item 7 Resolution have passed by the requisite majorities, subject to satisfaction of the remaining conditions precedent, the Supreme Court of Western Australia has listed the Second Court Hearing (the purpose of which is for the Court to consider approval of the Scheme) for 4.00pm (Perth time) on Wednesday, 1 May 2024.

An indicative timetable on the next steps has been outlined (refer to ASX Announcement dated 8 April) and Azure will update its shareholders as to any material developments in relation to the Scheme as the timetable progresses.

Lithium-focused drilling

For the March 2024 quarter, 57 diamond core holes were drilled 25,908m.

To the end of the March quarter, since the lithium-focused drilling commenced in March 2023, 243 diamond core holes have been completed for 81,944m, 94 Reverse Circulation (RC) holes completed for 18,775m, and 28 holes comprising RC pre-collars with diamond tails completed for 12,700m, for a grand total of 113,419m.

Throughout the period, drilling by the Company continued to deliver broad, high-grade lithium intersections from its two highest priority target areas (TA1 and TA3), indicating that Andover has the potential to be a lithium project of global significance (see Figure 1).

Target Area 3

During the quarter, Azure reported assays from diamond drilling at TA3, with consistent thicknesses and grade of lithium mineralisation returned from the AP0001 to AP0005 pegmatites. These impressive results confirm a major lithium-mineralised system is present at TA3.

ASX ANNOUNCEMENT

ASX:AZS

Most notably, the Company has encountered significant mineralisation in the AP0004 pegmatite along more than 2,100m of strike length (see Figure 3). AP0004 demonstrates strong consistency of mineralisation and predictability throughout its full extent with true widths typically being between 32m and 38m, averaging approximately 35m⁸.

The pegmatite dips at between 40° to 50° towards the northwest and extends from surface to more than 800m down-dip (to approximately 500m vertically below surface).

To date, drilling has not closed off the lithium mineralisation in any direction and the deposit remains open along strike to the northeast and southwest and down dip.

Significant mineralised intersections from the AP0004 pegmatite reported in March⁹ included:
