QUARTERLY ACTIVITIES REPORT
FOR THE PERIOD ENDED 31 MARCH 2024

During the quarter, Santa Fe Minerals Ltd (“**Santa Fe**”, “**SFM**” or “**the Company**”) continued exploration at the Watson’s Well Vanadium project and Challa Gold project.

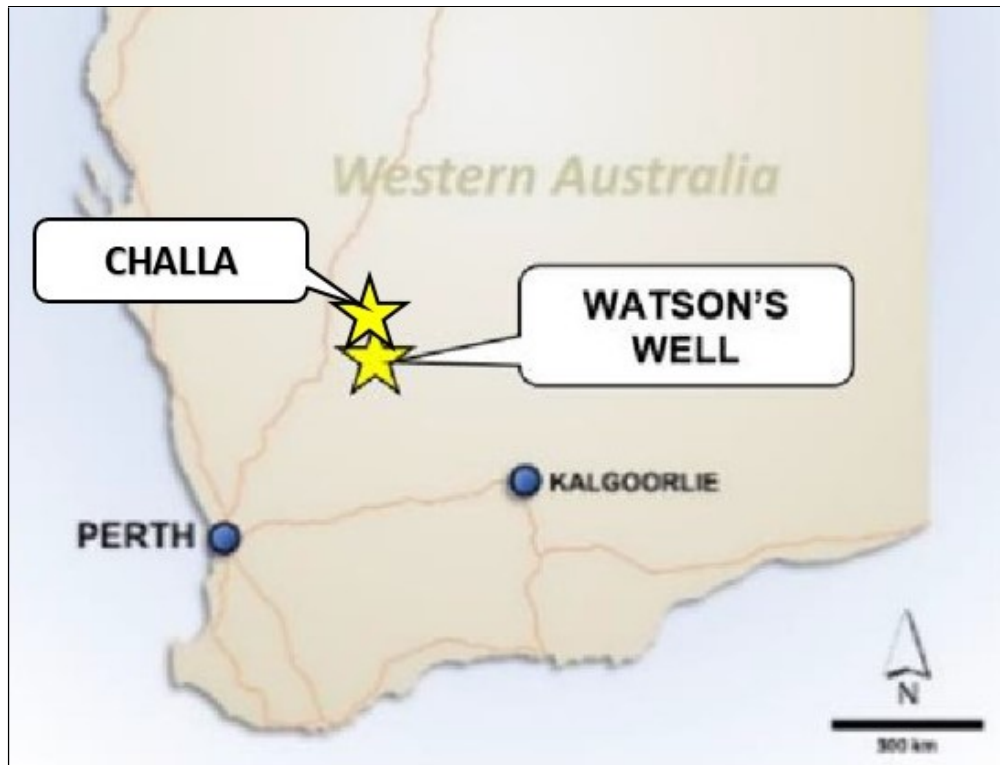

Figure 1: Project locations.

Watsons Well Vanadium -Titanium-Iron Project (SFM 100%)

Background:

The Watsons Well area hosts a 7km long high magnetic zone containing extensive vanadium-titanium-iron mineralisation. A maiden drilling program in 2022 targeting the central thicker part of the 7km magnetic high zone intersected strong magnetite with associated robust vanadium-titanium and iron grades. Multiple thick zones were intersected ranging up to 84m downhole. This thick zone in WWRC006 extended from 62m to 146m grading 0.4% V₂O₅, 4.24% TiO₂, 20% Fe. (ASX Announcement 3rd April 2023). Previous mapping and sampling showed high vanadium-titanium iron grades over 5km of the 7km long target zone (ASX Announcement 5th April 2022) suggests similar style vanadium-titanium-iron mineralisation is likely to be discovered over the entire length of the 7km long magnetic anomaly. The Company is currently investigating the best options to advance this large exploration target and to better target future drilling. As vanadium-titanium and iron mineralisation is directly associated with magnetite mineralisation an ultra-detailed drone based magnetic survey is currently being planned. This program will be completed on 25m spaced lines over the central part of the 7km long target which includes the area of the recently completed RC drilling. Once the results of the magnetic survey are received and incorporated with the current drilling data further drilling will be considered principally to explore the high grade and thick zones plus to obtain representative sample for metallurgical test-work.
