

Quarterly Activities Report

31 March 2024

Highlights

- Drilling contractor secured for first drilling program in over 50 years at Carb Lake REE project, Ontario, Canada
- Carb Lake REE drill program scheduled for late Q3 pending approvals
- Environmental surveys completed for first phase of drill testing large lithium target at Kaoko, Namibia
- The Company continues to review new opportunities

Cazaly Resources Limited (ASX: CAZ, "Cazaly" or the "Company") is pleased to provide this activities report for the March 2024 quarter.

PROJECTS – CANADA

SUNDOWN LITHIUM PROJECT (CAZ 25%, IMINERALS 75%)

The Sundown lithium project lies in the world-class James Bay Lithium Province, host to several advanced lithium projects and new lithium discoveries in Canada and comprises 510 mining claims covering pegmatite outcrops spanning over 260km² (Figure 1 & Figure 2).

The large tenement holding is strategically positioned between Allkem Ltd's (ASX: AKE) James Bay deposit with a lithium resource of 110.2Mt @ 1.30% Li₂O and Patriot Battery Metals (ASX: PMT) Corvette deposit with a lithium resource of 109.2Mt at 1.42% Li₂O within a 214km² land package.

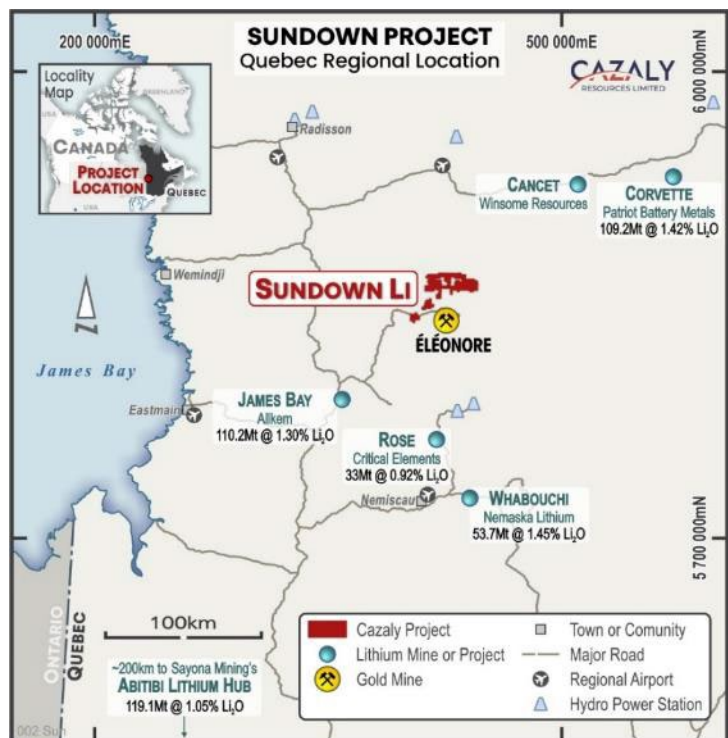

Figure 1. Location of the Sundown Lithium Project and significant lithium resources in the James Bay District.

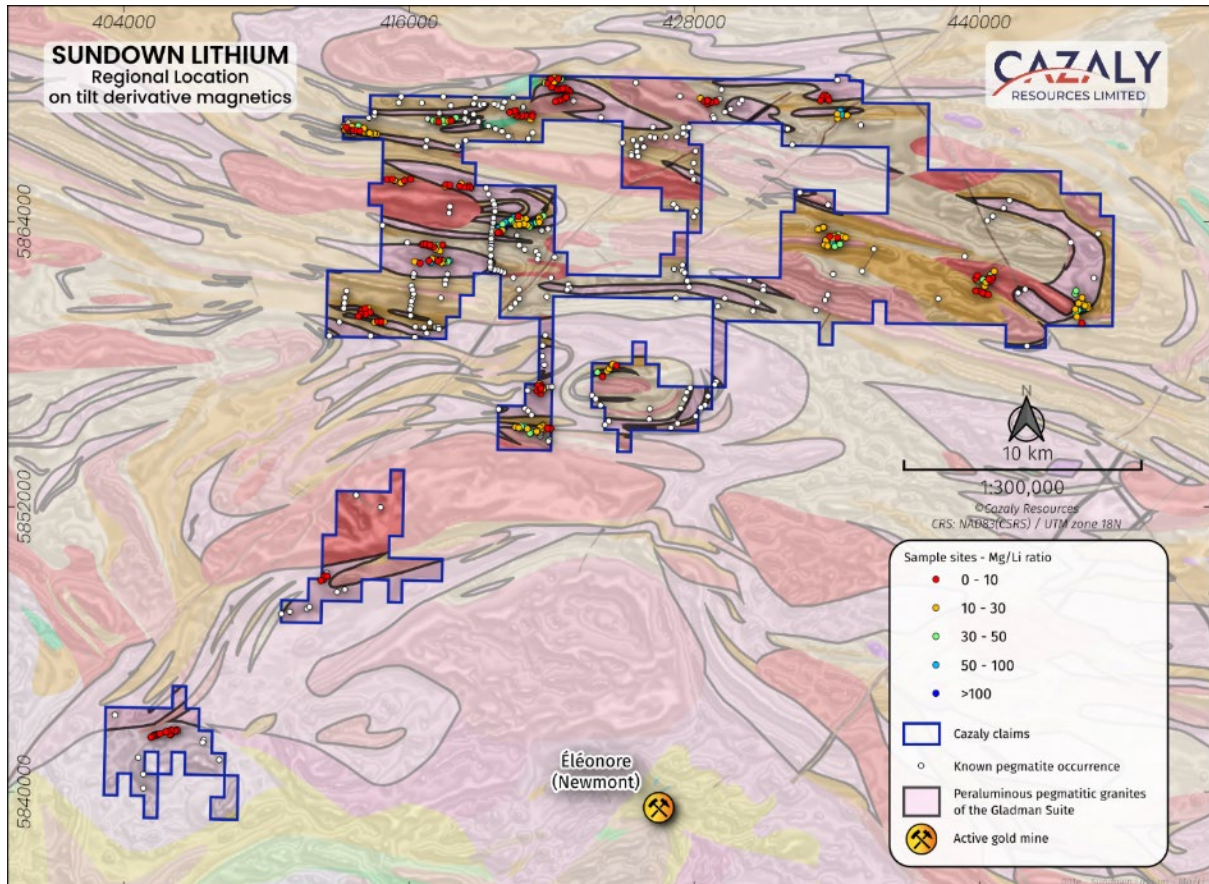

Figure 2. Results of initial rock chip sampling: Mg/Li ratios confirm fertile granites.

Results received during the previous quarter from surface rock chip samples confirmed the prospectivity of the Gladman intrusive suite, that occupies a significant portion of the Sundown project area, as a primary exploration target for LCT pegmatites.

With such a large landholding, a significant amount of methodical exploration work is required in order to adequately test the 260km² project area. Future helicopter supported exploration programs including mapping and rock chip or channel sampling are required, and Cazaly is reviewing its options in order to support ongoing activity at Sundown.

For further technical disclosures and references please refer to Cazaly announcements dated 31 May, 1 June, 7 August, 15 August, 4 September, 22 September, 18 October, 10 November 2023, and 19 January and 25 March 2024.

CARB LAKE CARBONATITE - RARE EARTH ELEMENTS PROJECT (CAZ 100%)

The Carb Lake rare earth elements (REE) project is located in the Red Lake District of Ontario, Canada a well-known mining province comprising 93 mineral claims covering a very large +3km diameter carbonatite complex.

Handheld pXRF results on remnant historical drill core validated the potential for the Carb Lake carbonatite to host economic REE and Nb mineralisation. The best pXRF results include **Nb 0.6%; La 3.36%; Ce 4.34%; Pr 0.42%; Nd 1.49%.**; and initial field reconnaissance exploration consisted of mapping, prospecting, and traversing the entire span of the large carbonatite complex.

The majority of carbonatite float samples collected during initial reconnaissance (Figure 3) returned highly anomalous REE, Sr, and Nb. The best grab samples include 2479ppm TREO, with NdPr comprising up to 22% of the TREO; and 2084ppm TREO, with NdPr up to 25% of the TREO.

The results provide further support that the large Carb Lake carbonatite complex is potentially enriched in rare earth and niobium elements and could host significant resources.

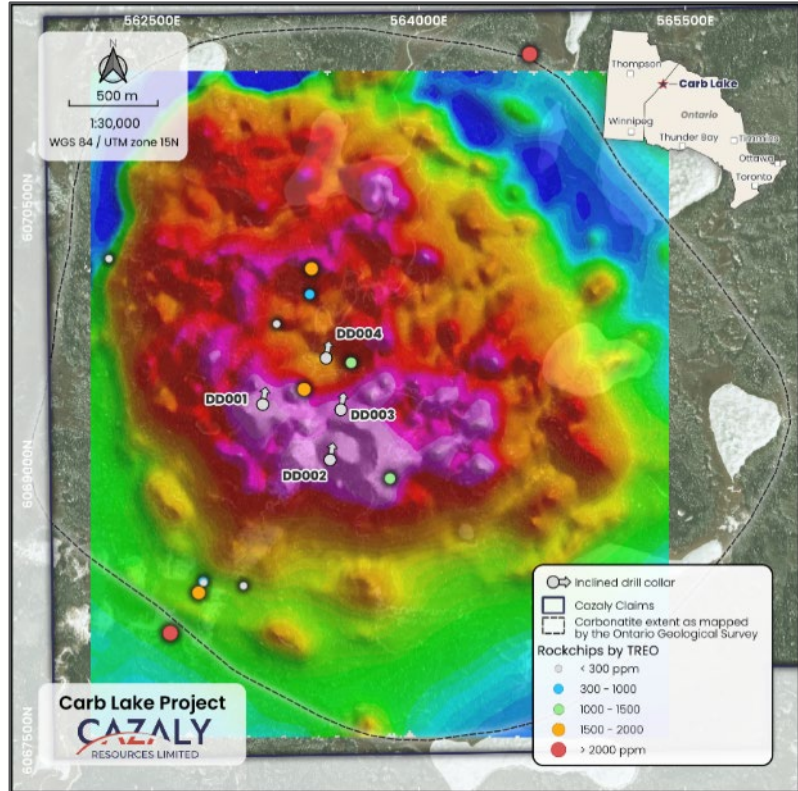

Figure 3. TREO results from surface float samples.

Table 1. Carbonatite size comparison with other REE carbonatite complexes.

Carbonatite Complex	Location	Diameter (km)	Stage
Araxa	Brazil	5	Producing
Carb Lake	Canada	+3	Exploration
Mount Weld	Australia	3	Producing
Pachpadra	Australia	Ellipse 3x1	Exploration
Nechalacho	Canada	2	Scoping Stage
Kangankunde	Malawi	0.8	Development

Cautionary Statement

The table above is presented to illustrate only the size of carbonatite complexes around the world. It should not be considered a comparison of company or project, a number of the projects in the table above are in development or production. The Carb Lake carbonatite is in the early exploration stage and there is no certainty that further exploration work will result in determination of an economic mineral resource.

The Company has secured a drilling contractor and continues to progress discussions with Sachigo First Nations with a view to establish a Memorandum of Understanding (MoU) for all drilling activities and future exploration programs at Carb Lake.

In the interim, a drilling program has been submitted and once all approvals are in place drilling is anticipated to commence in Q3, 2024. The drilling will provide better characterisation of the distribution of REE and Niobium mineralisation across the carbonatite and will inform the next phase of drilling across the intrusive complex.

Background

The project area is located in north-western Ontario, 10km from the Manitoba border. The project hosts a mid-Proterozoic aged carbonatite which intruded a suite of tonalites within the Northern Superior Superterrane which represents the northernmost exposure of Archaean Rocks in Ontario. The project is located between two major tectonic terrane boundaries along the North Kenyon Fault, a significant crustal scale fault providing ideal plumbing for mantle derived magma to intrude through to the upper crust.

Very little historical exploration has been completed on the Carb Lake carbonatite. Four diamond holes (DD001-DD004, Figure 3) were drilled at Carb Lake in 1967 for a total of 564m. The drill core provided data for geochemical studies, completed by the Ontario Department of Mines, Geological Survey in the late 1960s and early 1970s, with much of the diamond core consumed for these studies. The best results reported were from DD004, drilled into the centre of the carbonatite complex in an area of low magnetic intensity, with two samples reporting **>5% Ce and >1% La**. One sample reported a value of **7.1% Nb**.

Cautionary Statement

The historical exploration results reported have been sourced from public reports and are not reported in accordance with the JORC Code. The historical information is an accurate representation of the available data for the project that has been sourced to date. The pXRF exploration results reported herein have been collected by the Company on historical core samples and are not equivalent to analytical laboratory results. The use of spot pXRF readings only provides an indication of the potential order of magnitude of analytical laboratory assay results. The downhole location of pXRF results collected cannot be relied upon for actual location due to the incomplete nature of the remaining historical drill core.

For further technical information please refer to Cazaly's 2023 announcements dated 27 April, 3 May, 14 June, 31 July, 22 August, 22 September, 10 November, and 25 March 2024.

PROJECTS - AUSTRALIA

LYONS RARE EARTH ELEMENTS PROJECT

The Company holds over 1,000km² of tenure within the emerging REE district of the Gascoyne Province in Western Australia.

Positive assays from initial surface sampling highlighted several geochemical anomalies (Figure 4) worthy of further investigation. 212 stream sediment samples were collected across three target areas (A1-A3) to test the potential for REE and base metal mineralisation. The most promising geochemical anomalies were identified at Target A3.

Background

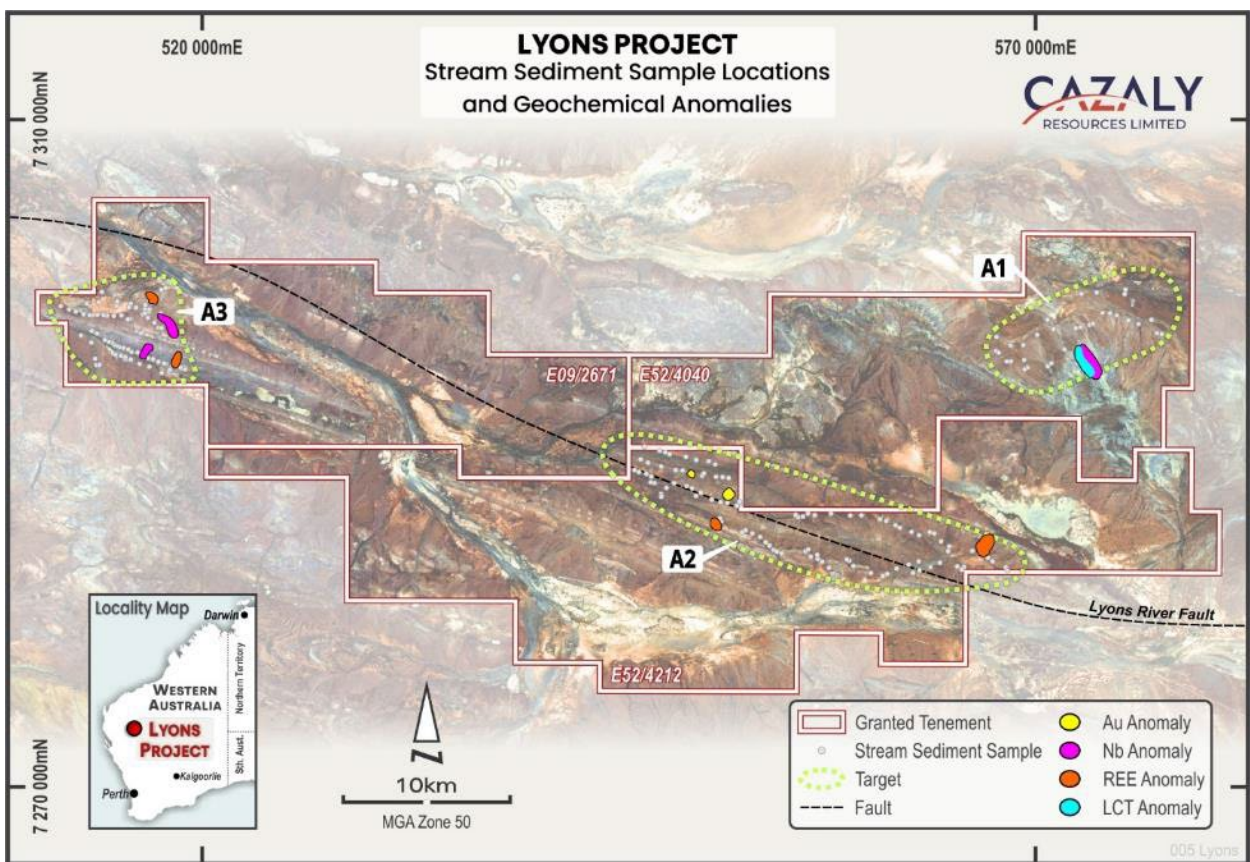

Figure 4. Surface geochemical anomalies identified at the Lyons Project.

The Gascoyne region is highly prospective for REE as well as base metals. Hastings Technology Metals Ltd (ASX: HAS) and Dreadnought Resources Ltd (ASX: DRE) REE projects are located approximately 100km northwest from Cazaly’s tenement package along the Lyons River Fault (Figure 5).

HAS is currently advancing construction of Yangibana which will produce a mixed rare earth carbonate, rich in Neodymium (Nd) and Praseodymium (Pr). The project has an NPV₁₁ of \$865 million, a 17-year mine life (ASX: HAS announcement 16 February 2024), and current JORC resource of 29.93Mt @ 0.93% Total Rare Earths Oxides (TREO) (ASX: HAS announcement 11 October 2022). Yangibana is under construction and development with first concentrate production due in 2025 (ASX: HAS announcement 31 May 2023).

DRE recently announced an updated resource for the Yin REE Ironstone Complex of 29.98Mt grading at 1.04% TREO. The resource covered only 4km, or ~10%, of the 43km long Yin REE Ironstone Complex (DRE announcement 30 November 2023).

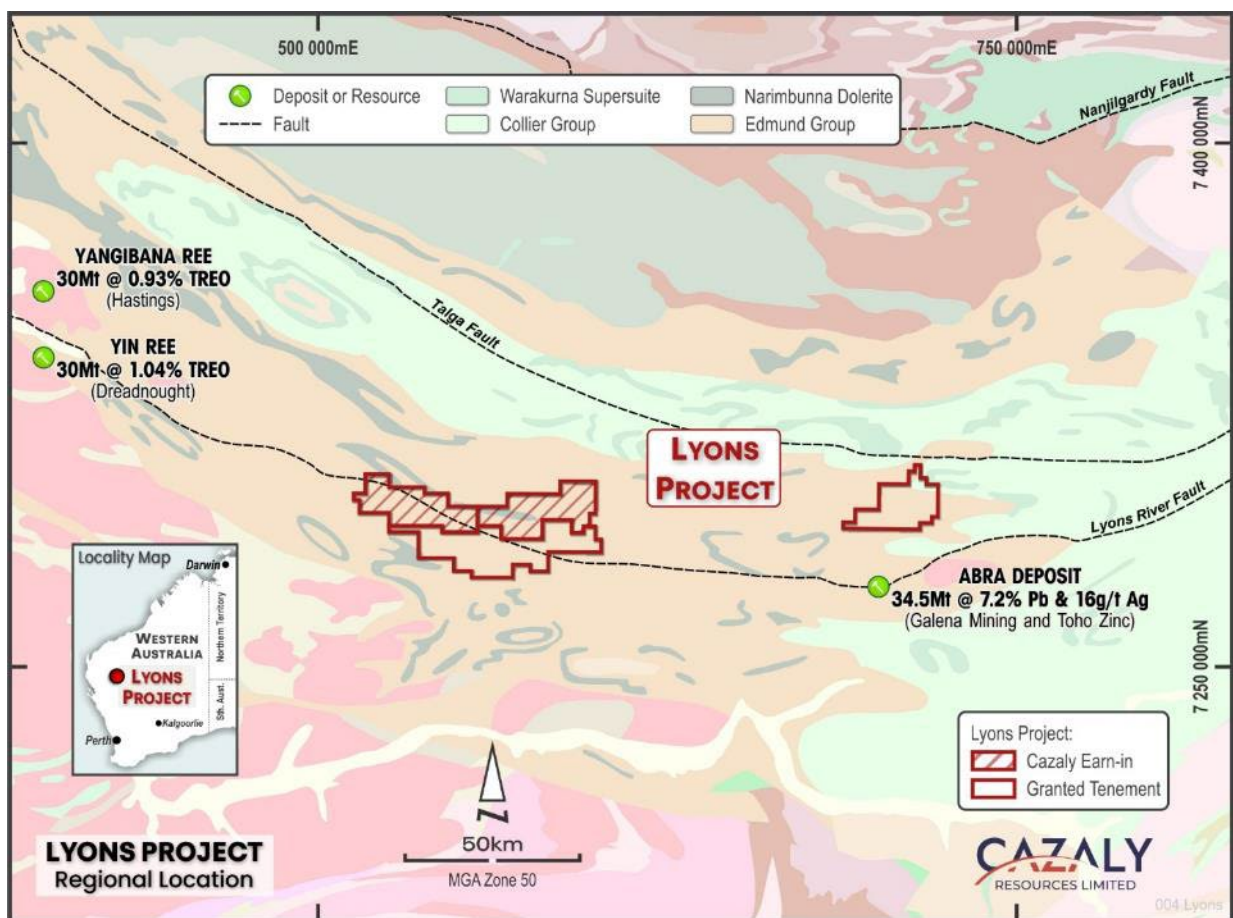

Figure 5. Lyons REE and base metal project location within the Gascoyne Province.

HALLS CREEK COPPER PROJECT (CAZ 100%)

Cazaly continues to explore opportunities for its assets at Halls Creek.

The Halls Creek Copper, Zinc and Silver project (CAZ 100%) is situated 25km southwest of Halls Creek and covers part of the Halls Creek Mobile Zone which is highly prospective for a range of commodities including copper, gold, and nickel. The project includes the Mount Angelo North volcanogenic massive sulphide (VMS) copper-zinc-silver deposit and the Bommie porphyry copper deposit (Figure 6).

Positive scoping study results, from AuKing Mining Limited's Koongie Park copper-zinc project which included mineralisation from the Company's 100%-owned Halls Creek and Bommie copper deposits¹(Figure 6), confirms the potential for a financially robust, globally competitive operation with life-of-mine of 11 years with an estimated total production of 110kt Cu, 38kt Zn and 355koz Ag.

The AuKing scoping study assessed four deposits, including the mineral resources at the Company's Mt Angelo North (1.72Mt @ 1.4% Cu, 1.4% Zn and 12.3g/t Ag) and Bommie (MRE: 95.6Mt @ 0.27% Cu) deposits.

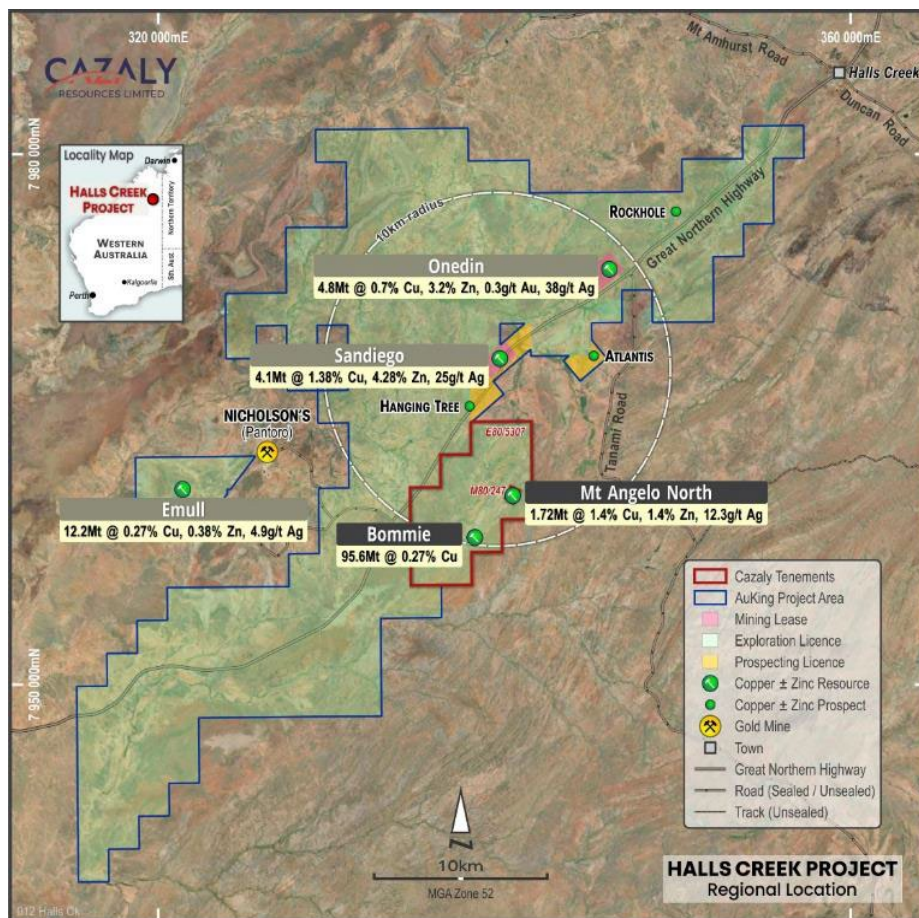

Figure 6. Halls Creek Copper Project with mineral resource locations relative to AuKing's project area.

¹ See [ASX Announcement dated: 1 June 2023](#)

The full scoping study results are included in Cazaly's ASX announcement titled: "AuKing Completes Scoping Study on Halls Creek Copper Project" dated 1 June 2023.²

ASHBURTON BASIN REE, GOLD AND BASE METALS PROJECT (CAZ 100%)

Cazaly's Ashburton project spans 2,450km² in the Ashburton Basin, in the Pilbara region of Western Australia (Figure 7). The Ashburton Basin forms the northern part of the Capricorn Orogen, a ~1,000km long, 500km wide region of variably deformed metamorphosed igneous and sedimentary rocks located between the Yilgarn and Pilbara cratons.

The Ashburton project covers major regional structures considered to be highly prospective for gold, base metals and REE mineralisation. The project area presents an excellent opportunity for discovery of large mineralised systems along the major regional scale structures, which to date have seen very little modern exploration.

Exploration activities conducted by Cazaly to date have identified 4 regional scale mineralised trends (Figure 7) up to 70km long that coincide with several mantle tapping structures required for the development of large-scale mineralised systems. In addition to this regional scale targeting, several prospect scale targets, up to 10km long, have been identified across the project area.

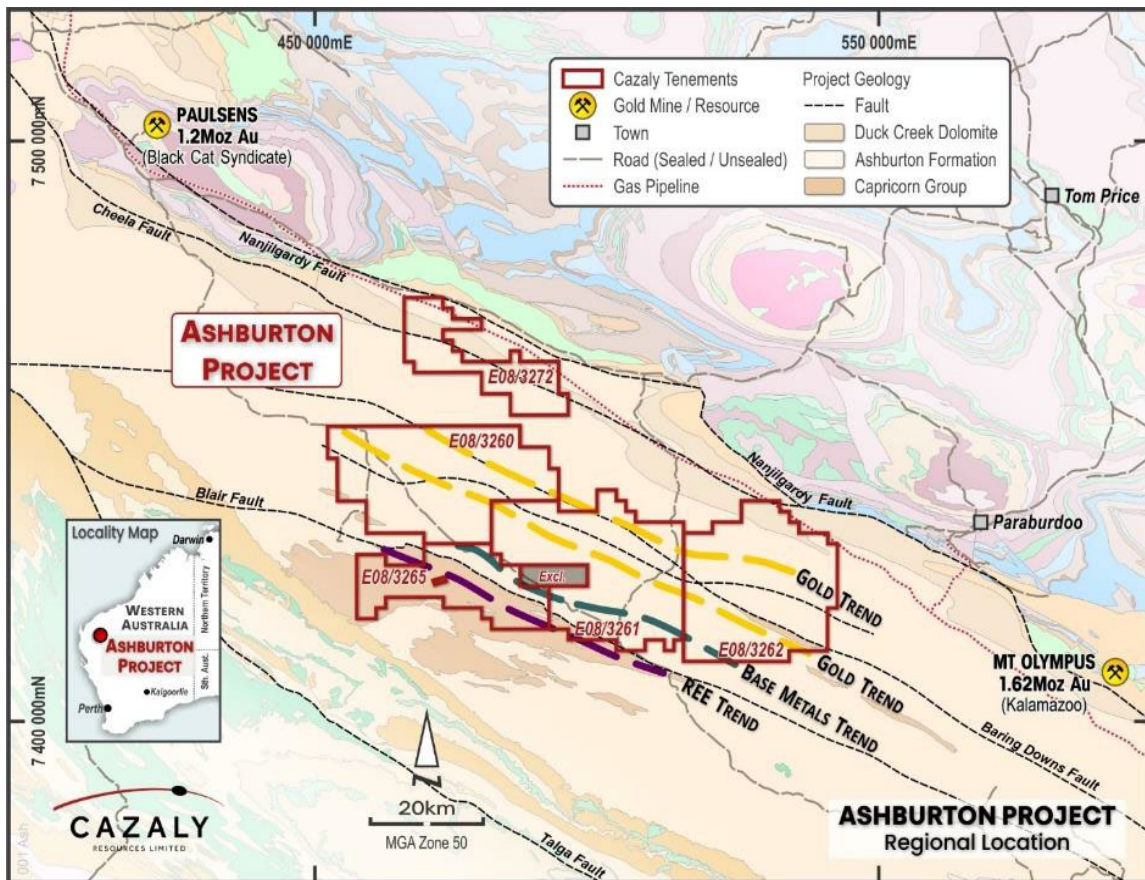

Figure 7. Location of the Ashburton project with regional scale mineralised trends with +1Moz gold deposits along strike.

² [AuKing Completes Scoping Study on Halls Creek Copper Project](#)

PROJECTS – NAMIBIA

ABENAB RARE EARTH ELEMENTS & BASE METALS PROJECT (CAZ 95%)

Figure 8: Location of Namibian Critical Minerals Projects

The application for a new exploration licence (EPL 9110 - Abenab North) remains pending approval. The project is located in the northern region of Namibia (Figure 8) The application covers an area of approximately 790km². The project is considered highly prospective for base metals and REE mineralisation as evidenced from the results of previous but limited exploration.

The project lies in the Otavi Mountain Land region of northern Namibia located approximately 450km by road from the capital of Windhoek in an area supported by the towns of Tsumeb and Grootfontein. The region is a significant

well mineralised base metals province with historic production from several mines including Tsumeb, Kombat, Abenab and the Berg Aukas mines. Tsumeb is a world-famous Cu-Pb-Zn-Ag-Ge-Cd mine renowned for its wealth of rare and unusual minerals and was mined from 1897 to 1996.

KAOKO LITHIUM PROJECT (CAZ 95%)

The Kaoko lithium project is located in northern Namibia, approximately 800km by road from the capital of Windhoek and approximately 750km from the port of Walvis Bay. A large lithium in soil anomaly at the Ohevanga Prospect measures 12km x 10km. The anomaly was defined with broadly spaced surface samples collected across a 1km grid and has been followed up with infill surface sampling to better define and confirm the target. During the December '23 quarter the exploration licence was renewed for a period of two years, and a drilling program was formulated to test the large lithium anomaly at Ohevanga (refer to ASX announcement dated 13 November 2023).

Following renewal of the licence, the Company submitted the required Environmental Compliance Monitoring and Audit Report and the updated Environmental Management Plan in mid-December 2023 in order to renew the Environmental Clearance Certificate (ECC). The ECC renewal is still pending.

In order to progress towards drilling the large lithium target at Ohevanga the Company has completed and submitted the environmental surveys required for planned drilling activities. However, drilling cannot proceed without the renewed ECC in place. This renewal is currently being assessed by the Ministry of Environment, Forestry and Tourism. While the Company had previously announced drilling would take place in late Q1 to early Q2 2024 (see ASX announcement 13/11/2023), due process is required for all approvals to be in place. Drilling will now be scheduled as soon as possible following the grant of the ECC.

JOINT VENTURE PROJECTS

Mt Venn (CAZ 20%, WML 80%)

The Mt Venn Gold project is located 125km northeast of Laverton in the North-eastern Goldfields Region of Western Australia and covers approximately 400km² of prospective greenstone sequence. The project area lies within the Mount Venn-Yamarna-Dorothy Hills greenstone belt which is the most easterly major N-S striking greenstone belt of the Yilgarn Craton.

The belt is considered highly prospective for gold and nickel and is positioned along the western limb of the Yamarna Greenstone Belt that hosts Gold Road's and Gold Fields' 6Moz Gruyere Gold Mine. Together, the Yilgarn greenstone belts account for 30% of the world's gold reserves, most of Australia's nickel production and other base metal and rare earth deposits.

Cazaly is free carried to pre-feasibility study stage.

No field work was completed by Woomera Mining Ltd (WML 80%) during the quarter.

McKenzie Springs (CAZ 30%, FIN 70%)

Sammy Resources Pty Ltd (a wholly owned subsidiary of Cazaly) is in joint venture (CAZ 30%, FIN 70%) with Fin Resources Ltd (ASX: FIN) over exploration licence E80/4808, the McKenzie Springs Project, located in the Kimberley region of Western Australia. The project lies south along strike from the Savannah nickel-copper-cobalt mine owned by Panoramic Resources Ltd (ASX: PAN).

A ground FLTEM survey was designed to test the interpreted gossan visited during the November 2023 field work program. In addition to the ground FLTEM survey, a program of stream sediment sampling will begin during the June 2024 quarter along drainage channels that exist across the Spring Creek Intrusion in conjunction with outcrop mapping and rock chip sampling by a field geologist.

ROYALTY PROJECTS

Mineral Resources Limited (ASX: MIN) continued production activities at the *Parker Range Iron Ore Mine*. Cazaly, as the royalty holder, is entitled to receive A\$0.50/tonne of iron ore produced from the mine, once the first 10 million tonnes of production have been reached.

The Company retains a royalty interest of US\$0.30/tonne in the Hamersley iron ore project, managed by Equinox Resources Limited (ASX: EQN). The project is located in the heart of the Pilbara iron ore province and currently has a total Mineral Resource estimate of 343.2Mt at 54.5% Fe (*reported in compliance with JORC Code 2012 - refer to Pathfinder's ASX Announcement dated 24 January 2020*). Equinox continues to advance the project towards development.

CORPORATE

Financial Summary (Appendix 5B)

For the quarter ending 31 March 2024, the Company's net cash outgoings (per item 1.9) were \$237k whilst net cash received from investing activities (per item 2.6) was \$825k. The majority of the \$355k expenditure was incurred in the previous quarter and included direct costs associated with field exploration activities such as geological reconnaissance field trips, data acquisition, geochemical surface sampling and assaying, and other activities. The major cash inflow was the balance of the sale of EQN shares of \$1,180k. Payments to related parties and their associates include directors' fees of \$62k apportioned to corporate activities (per item 6.1), and \$81k apportioned to exploration activities (per item 6.2). As of 31 March 2024, the Company had \$5.4M in cash (per item 4.6).

The Company had cash and investments of approximately \$6.1 million at 31 March 2024.

The Cazaly Board authorises the release of this March '24 Quarterly Activities Report and the Appendix 5B dated 30 April 2024.

Previously Reported Information

The information in this report that relates to Resource Estimates, Exploration targets and Exploration results is extracted from previous company announcements to the ASX, all are available to view on <https://www.cazalyresources.com.au>. For the purposes of ASX Listing Rule 5.23 the Company confirms that it is not aware of any new Exploration information or data that materially affects the information included in the original market announcements. The company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.

Competent Persons Statement

The information contained herein that relates to Exploration Results is based upon information compiled or reviewed by Ms Tara French and Mr Don Horn, who are employees of the Company. Ms Tara French and Mr Horn are both Members of the Australasian Institute of Geoscientists and have sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which they are undertaking to qualify as a Competent Persons as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Ms Tara French and Mr Horn both consent to the inclusion of their names in the matters based on the information in the form and context in which it appears.

(1) The information in this report that relates to the Mount Angelo North Mineral Resource is based on information compiled by Ms Vanessa O'Toole Principle Consultant of Honey Mining and Resources Pty Ltd, a Competent Person, who is a Member of The Australasian Institute of Mining and Metallurgy and has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Ms Vanessa O'Toole consents to the inclusion in the report of the matters based on her information in the form and context in which it appears.

(2) The information in this report that relates to the Bommie porphyry copper mineral resource estimation is based on work completed by Mr. Stephen Hyland, a Competent Person and Fellow of the AusIMM. Mr. Hyland is Principal Consultant Geologist with Hyland Geological and Mining Consultants (HGMC), who is a Fellow of the Australian Institute of Mining and Metallurgy and holds relevant qualifications and experience as a qualified person for public reporting according to the JORC Code in Australia. Mr Hyland is also a Qualified Person under the rules and requirements of the Canadian Reporting Instrument NI43-101. Mr Hyland consents to the inclusion in this report of the information in the form and context in which it appears.

Forward Looking Statement

This ASX announcement may include forward-looking statements. Forward-looking statements include, but are not limited to, statements concerning Cazaly's planned exploration program(s) and other statements that are not historical facts. When used in this document, the words such as "could," "plan," "estimate," "expect," "intend," "may", "potential," "should," and similar expressions are forward looking statements. Although Cazaly Resources believes that its expectations reflected in these forward-looking statements are reasonable, such statements involve risks and uncertainties and no assurance can be given that actual results will be consistent with these forward-looking statements. The forward-looking statements in this announcement reflect views held only as at the date of this announcement.

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
