

ASX ANNOUNCEMENT | 9 May 2024

# AUGER DRILLING IDENTIFIES HIGH GRADE RARE EARTH ELEMENTS AT RED PEAK PROJECT IN THE GASCOYNE REGION, WESTERN AUSTRALIA

## HIGHLIGHTS

- Auger drilling campaign completed during the exploration season at the 100%-owned Red Peak Project located in the Gascoyne Region of Western Australia
- Red Peak is located immediately southeast of the Mt Clere REE-Niobium project owned by Krakatoa Resources Limited (ASX. KTA)
- A total of 801 auger drilling samples were collected on a 500m x 500m grid with the assay results demonstrating significant and high-grade Rare Earth Element (REE) mineralisation for both "light" and "heavy" Rare Earth Element groups
- Total Rare Earth Oxide (TREO) results up to 4505 ppm TREO with 15 results greater than 766 ppm TREO
- Total Light Rare Earth Oxide (TLREO) results up to 4284 ppm TLREO
  - o Light Rare Earth Element results were dominated by Cerium (Ce) as well as Lanthanum (La) and Praseodymium (Pr)
  - o Cerium Results up to 2990 ppm Ce
- Total Heavy Rare Earth Oxide (THREO) results up to 884 ppm THREO with Heavy Rare Earth Element results dominated by Samarium (Sm), Europium (Eu), Gadolinium (Gd) and Dysprosium (Dy)

Askari Metals Limited (ASX: AS2) ("Askari" or "Company") is pleased to announce the assay results from its auger drilling campaign completed at the 100%-owned Red Peak project located in the Gascoyne Region of Western Australia.

A total of 801 auger drilling samples were collected on the Red Peak project on a 500m x 500m grid with the assay results demonstrating significant and high-grade Rare Earth Element (REE) mineralisation for both "light" and "heavy" Rare Earth Element groups.

The Red Peak project is located immediately southeast of the Mt Clere REE-Niobium project owned by Krakatoa Resources Limited (ASX. KTA) sharing the same geological features and settings and boasting the same mineralisation potential.

The design basis for the 801-point auger drilling grid was to test the potential of the Red Peak project at a project-wide level with a 500m x 500m sample spacing. The location of the samples were selected based on field activities undertaken by the Company during previous exploration campaigns as well as Rare Earth Element results from the WAMEX database. In addition, the Company utilised the target generation survey identified by ASTER satellite hyperspectral analysis.

The results from this initial auger drilling campaign has demonstrated the significant exploration upside at the Red Peak project for "light" and "heavy" REE mineralisation as well as the potential for identifying potential Niobium mineralisation utilizing similar techniques to those adopted nearby at the Mt Clere project.

The Company is now planning to follow up this project-wide campaign with a 250m x 250m infill auger drilling grid. The assay analysis covered the full suite of Rare Earth Elements (REE), and the data was reviewed with reference to Total Rare Earth Oxides (TREO), Total Light Rare Earth Oxides (TLREO) and Total Heavy Rare Earth Oxides (THREO).

Significantly, these assay results demonstrate that 381 samples have TREO results above the nominal background value of 255 ppm TREO, and they also show that Light REOs are more prevalent in the data than Heavy REOs, although both are extremely anomalous.

### **Commenting on the assay results, Managing Director, Mr Gino D'Anna, stated:**

*"The results of the auger drilling campaign at Red Peak have provided a significant number of high-grade REE mineralised surface results with notable high maximum results achieved by some metals like Cerium, Samarium, Gadolinium and Europium. This dataset has identified areas to focus on more closely with a follow-up infill auger drilling sampling campaign.*

*Rare Earth Element exploration requires an in-depth knowledge of the host lithology and how the REE's can be liberated. The Company is proposing to conduct more detailed work focusing on REE liberation and will engage suitable industry experts to advance the project.*

*Askari looks forward to defining the REE potential of the Red Peak project and evaluating future exploration activities, updating our shareholders as our exploration activities continue."*

### **Background**

Rare earth elements (REEs) are a group of 17 elements that are important for a range of applications and are found in a variety of geological settings. Examples of REE hosts include carbonatites, pegmatites, ion-adsorption clays and iron-oxide-copper-gold deposits.

REEs are widely used in modern technologies such as electronic devices, wind turbines, electric vehicle batteries, high-performance alloys, magnets, and medical applications such as MRI machines and X-ray tubes.

REEs are also used in pollution control and specialised glass and ceramic products for smartphones and televisions. Their unique properties make them essential for many modern technologies, and their importance is expected to grow.

The wide-spaced (500m x 500m) auger drilling and sampling survey was designed using targets identified by the WAMEX database, data from rock samples collected by the Company and remote Sentinel-2 satellite imagery using REE indicators such as helium and talc.

## Discussion of Results

The assay results received from the soil sampling campaign were reviewed for all the Rare Earth Elements. The oxides for those elements were calculated using conversion factors and the formulas:

$La \times 1.1728 = La_2O_3$ ;  $Ce \times 1.1713 = Ce_2O_3$ ;  $Pr \times 1.1703 = Pr_2O_3$ ;  $Nd \times 1.1664 = Nd_2O_3$ ,  $Sm \times 1.1596 = Sm_2O_3$ ;  
 $Eu \times 1.1579 = Eu_2O_3$ ;  $Gd \times 1.1526 = Gd_2O_3$ ;  $Tb \times 1.151 = Tb_2O_3$ ;  $Dy \times 1.1477 = Dy_2O_3$ ;  $Ho \times 1.1455 = Ho_2O_3$ ;  $Er \times 1.1435 = Er_2O_3$ ;  $Tm \times 1.1421 = Tm_2O_3$ ;  $Yb \times 1.1387 = Yb_2O_3$ ;  $Y \times 1.2699 = Y_2O_3$  and  $Lu \times 1.1371 = Lu_2O_3$ .

The resultant Total Rare Earth Oxides was determined by summing the oxides as calculated above using the formula:

$TREO \text{ (Total Rare Earth Oxide)} = La_2O_3 + Ce_2O_3 + Pr_2O_3 + Nd_2O_3 + Sm_2O_3 + Eu_2O_3 + Gd_2O_3 + Tb_2O_3 + Dy_2O_3 + Ho_2O_3 + Er_2O_3 + Tm_2O_3 + Yb_2O_3 + Y_2O_3 + Lu_2O_3$ .

The Total Rare Earth Element suite was split into the Total Light Rare Earth Oxides (TLREO) and Total Heavy Rare Earth Oxides (THREO).

The TLREO (Total Light Rare Earth Oxides) include  $La_2O_3 + Ce_2O_3 + Pr_2O_3 + Nd_2O_3$ , while the THREO (Total Heavy Rare Earth Oxides) include  $Sm_2O_3 + Eu_2O_3 + Gd_2O_3 + Tb_2O_3 + Dy_2O_3 + Ho_2O_3 + Er_2O_3 + Tm_2O_3 + Yb_2O_3 + Y_2O_3 + Lu_2O_3$ .

To help understand whether sample results are positive, it helps to compare them against expected background values for the element in the appropriate environment. The likelihood of positively anomalous results increases if the average result is above the background value.

The Total Rare Earth Oxide (TREO) suite's background level is 255ppm TREO. The background value for the Total Light Rare Earth Oxide (TLREO) suite is 178ppm TLREO, while the background value for the Total Heavy Rare Earth Oxide (THREO) suite is calculated to be 78ppm THREO.

## Total Rare Earth Oxides – TREO

The Total Rare Earth Oxide results are encouraging and show an average of 279 ppm TREO from the 801 samples, which is above the average background TREO. Fifteen samples have TREO values greater than three times (3 x) the background value of 766 ppm TREO.

The highest TREO result of 4505 ppm TREO is impressive and justifies additional efforts to define this exciting target.

Table 1 below tabulates the top fifteen TREO sample results from the soil sampling program.

Sample ID	Total Rare Earth Oxides
AA00658	4505
AA00803	3611
AA00404	1534
AA00567	1481
AA00727	1084
AA00675	1083
AA00632	1062
AA00581	925
AA00615	913
AA00511	884
AA00599	880
AA00522	788
AA00570	778
AS81068	776
AA00647	767

Table 1: Table of the top fifteen TREO results from the auger drilling and sampling campaign

A spatial review of the data indicated that most elevated results are concentrated in the central part of the tenement, with a few outliers to the east and west. Figure 1 illustrates the spatial distribution of the TREO values from the soil sampling campaign.

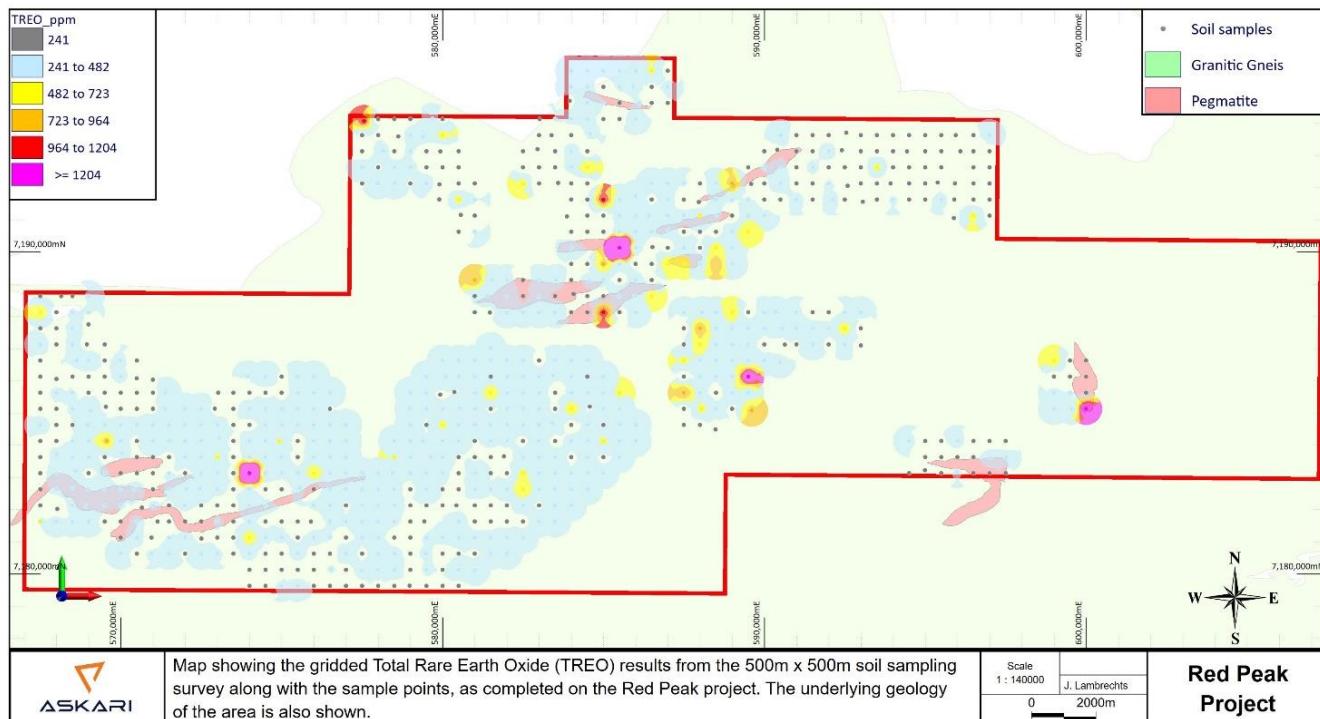

Figure 1: Image depicting the gridded TREO results from the auger drilling and sampling campaign

## Total Light Rare Earth Oxides – TLREO

The Total Light Rare Earth Oxide results are excellent and show an average of 231 ppm TLREO from the 801 samples, which is above the average background of 178 ppm TLREO. Twenty-four (24) samples have TLREO values greater than three times (3 x) the background value of 534 ppm TLREO. The highest result of 4284 ppm TLREO is impressive and justifies additional efforts to define this exciting target.

On an individual front, the Light Rare Earth Element suite is dominated by Cerium, with a maximum result forty-five times (45 x) the background value of 66.4 ppm Ce and an average of 99 ppm Ce, well above the background value.

Lanthanum and Praseodymium are also positively anomalous, with average values above the expected background for the individual elements and a high proportion of samples returning results three times or more than the background value. Table 2 tabulates the top fifteen elemental results for the Light Rare Earth Element suite.

Sample ID	Light Rare Earth Elements			
	Lanthanum La_ppm	Cerium Ce_ppm	Praseodymium Pr_ppm	Neodymium Nd_ppm
AA00658	316.0	2990.0	82.3	270.0
AA00803	363.0	1040.0	174.0	754.0
AA00567	263.0	534.0	53.7	194.0
AA00404	428.0	166.0	91.6	340.0
AA00727	233.0	396.0	47.5	148.0
AA00675	280.0	322.0	49.3	153.0
AA00632	208.0	380.0	49.3	166.0
AA00615	215.0	373.0	37.5	108.0
AA00581	234.0	298.0	37.4	110.0
AA00511	144.0	400.0	27.6	93.4
AA00522	186.0	314.0	31.5	97.7
AA00599	79.8	473.0	13.4	54.1
AS81068	178.0	299.0	30.9	102.0
AA00647	129.0	355.0	27.9	83.1
AA00570	90.2	420.0	19.3	64.8

Table 2: Table of the top fifteen Light Rare Earth Element results

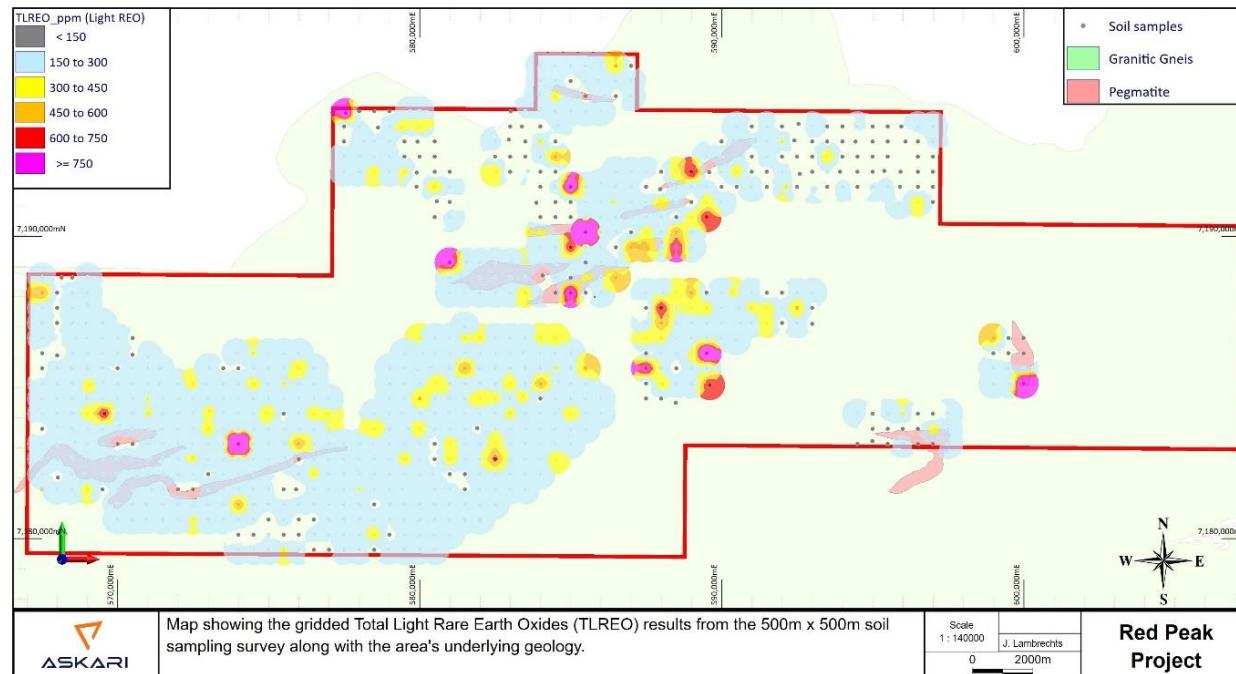

Figure 2: Map showing the Total Light Rare Earth Oxide results for the auger sampling campaign

The Spatial distribution of the light Rare Earth Oxide minerals is similar to that of the Total Rare Earth Oxides and clusters around the central portion of the tenement, with outliers in the east and west.

## Total Heavy Rare Earth Oxides – THREO

Three samples have THREO values greater than three times (3 x) the background value, with the highest result of 884 ppm THREO.

On an individual basis, the Heavy Rare Earth Element suite is dominated by Samarium, Europium and Gadolinium, with a maximum result of more than twenty times (20 x) the background value.

Terbium and Dysprosium are also positively anomalous, with average values above the expected background for the individual elements and several samples returning results three times or more than the background value. Table 2 tabulates the top fifteen elemental results for the Heavy Rare Earth Element suite.

Table three below tabulates the top fifteen results of the Heavy Rare Earth Element suite.

Figure three below depicts the spatial distribution of the soil sampling campaign's Total Rare Earth Oxide results. As with the TREO and TLREO results, the positively anomalous samples cluster in the central portion of the tenement. The footprint of the THREO anomalism is smaller than those of the TLREO and TREO, but it shares the same spatial characteristics, making it possible for an appropriately designed follow-up soil program to test all three Rare Earth Element categories.

## FUTURE WORK

The results of this initial project-wide auger drilling and sampling campaign have enabled the Company to identify a target area in the centre of the tenement where a closer-spaced infill sampling campaign will help define the Rare Earth Element target more clearly. The current sample spacing is about 500m x 500m, and the proposed infill program is planned to be 250m x 250m and should include a further 635 samples. The Board will determine the commencement of this program depending on the Company's overall exploration strategy. Figure 4 below shows the design of the infill sampling program.

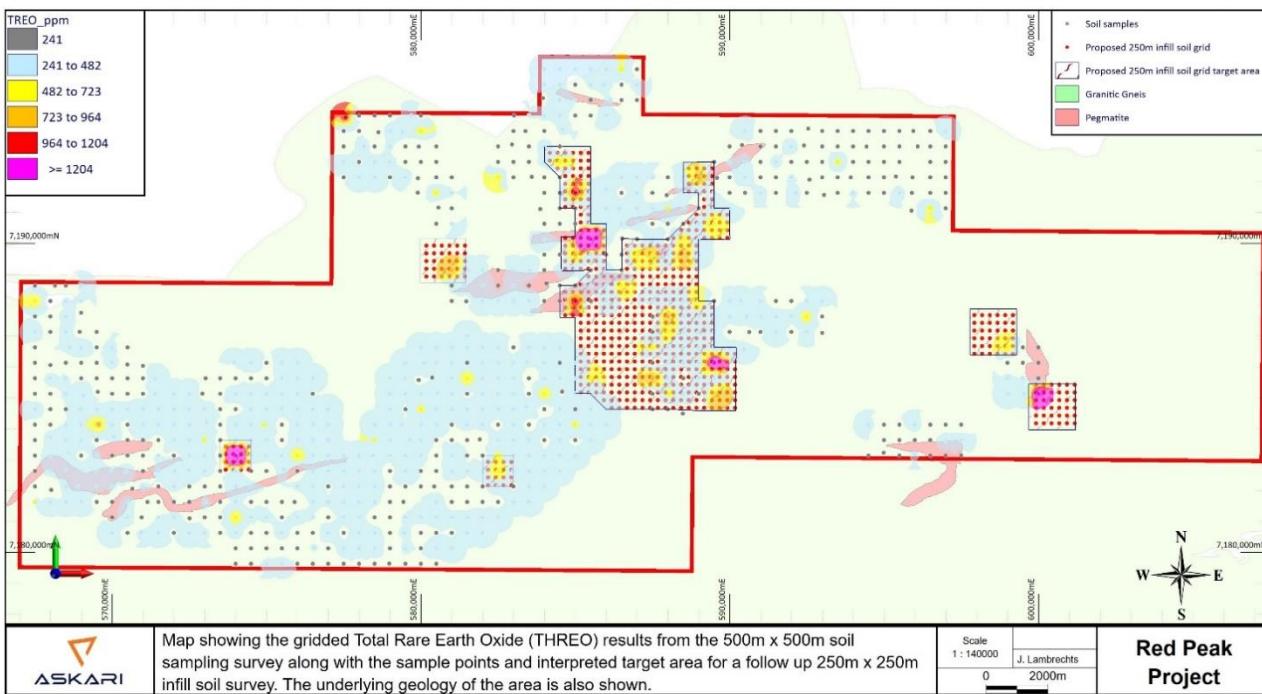

Figure 4: Map depicting the planned 250m x 250m infill auger drilling sampling program

This announcement is authorised for release by the Board of the Company.

#### ABOUT ASKARI METALS

Askari Metals is a focused Southern African exploration company. The Company is actively exploring and developing its Uis Lithium Project in Namibia located along the Cape-Cross – Uis Pegmatite Belt of Central Western Namibia. The Uis project is located within 2.5 km from the operating Uis Tin-Tantalum-Lithium Mine which is currently operated by Andrada Mining Ltd and is favourably located with the deep water port of Walvis Bay being less than 230 km away from the Uis project, serviced by all-weather sealed roads. In March 2023, the Company welcomed Lithium industry giant Huayou Cobalt onto the register who remains supportive of the Company's ongoing exploration initiatives.

The Company has also recently acquired the Matemanga Uranium Project in Southern Tanzania which is strategically located less than 70km south of the world-class Nyota Uranium Mine. Askari Metals is actively engaged in due diligence to acquire further uranium projects in this emerging tier-1 uranium province.

The Company is currently assessing its options for a spin-out divestment strategy of the Australian projects which includes highly prospective gold, copper, lithium and REE projects.

**CAUTION REGARDING FORWARD-LOOKING INFORMATION**

This document contains forward-looking statements concerning Askari Metals Limited. Forward-looking statements are not statements of historical fact and actual events and results may differ materially from those described in the forward-looking statements as a result of a variety of risks, uncertainties and other factors. Forward-looking statements are inherently subject to business, economic, competitive, political and social uncertainties and contingencies. Many factors could cause the Company's actual results to differ materially from those expressed or implied in any forward-looking information provided by the Company, or on behalf of, the Company. Such factors include, among other things, risks relating to additional funding requirements, metal prices, exploration, development and operating risks, competition, production risks, regulatory restrictions, including environmental regulation and liability and potential title disputes.

Forward looking statements in this document are based on the Company's beliefs, opinions and estimates of Askari Metals Limited as of the dates the forward-looking statements are made, and no obligation is assumed to update forward looking statements if these beliefs, opinions and estimates should change or to reflect other future developments.

**COMPETENT PERSONS STATEMENT**

The information in this report that relates to Exploration Targets, Exploration Results or Mineral Resources is based on information compiled by Clifford Fitzhenry, a Competent Person who is a Registered Professional Natural Scientist with the South African Council for Natural Scientific Professions (SACNASP) as well as a Member of the Geological Society of South Africa (GSSA) and a Member of the Society of Economic Geologists (SEG).

Mr. Fitzhenry is the Chief Project and Exploration Manager (Africa) for Askari Metals Limited, who has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr. Fitzhenry consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

## **Appendix 1 – JORC Code, 2012 Edition, Table 1 report**

### **Section 1 Sampling Techniques and Data (Criteria in this section applies to all succeeding sections)**

<b>Criteria</b>	<b>JORC Code explanation</b>	<b>Commentary</b>
Sampling techniques	<ul style="list-style-type: none"><li>• Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</li><li>• Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</li><li>• Aspects of the determination of mineralisation that are Material to the Public Report.</li></ul>	Soil Auger samples Soil samples  Samples are clear of organic matter.
Drilling techniques	<ul style="list-style-type: none"><li>• Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details.</li></ul>	Soil Auger and soil samples
Drill sample recovery	<ul style="list-style-type: none"><li>• Method of recording and assessing core and chip sample recoveries and results assessed.</li></ul>	Samples collected from the bottom of the flight and/or from the bottom of the hole.
Logging	<ul style="list-style-type: none"><li>• Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource Estimation, mining studies and metallurgical studies.</li></ul>	Samples were logged with comments on colour before being placed into Calico bags.
Sub-sampling techniques and sample preparation	<ul style="list-style-type: none"><li>• For all sample types, the nature, quality and appropriateness of the sample preparation technique.</li></ul>	All samples are crushed then pulverised in a ring pulveriser (LM5) to a nominal 90% passing 75 micron. An approximately 100g pulp sub-sample is taken from the large sample and residual material stored. A quartz flush (approximately 0.5 kilogram of white, medium-grained sand) is put through the LM5 pulveriser prior to each new batch of samples. A number of quartz flushes are also put through the pulveriser after each massive sulphide sample to ensure the bowl is clean prior to the next sample being processed. A selection of this pulverised quartz flush material is then analysed and reported by the lab to gauge the potential level of contamination that may be carried through from one sample to the next.

Criteria	JORC Code explanation	Commentary
Quality of assay data and laboratory tests	<ul style="list-style-type: none"> <li>The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</li> <li>Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.</li> </ul>	<p>All AS2 samples were submitted to Bureau Veritas Laboratories in Adelaide. The samples were sorted, wet weighed, dried then weighed again. Primary preparation involved crushing and splitting the sample with a riffle splitter where necessary to obtain a sub-fraction which was pulverised in a vibrating pulveriser. All coarse residues have been retained.</p> <p>The samples have been analysed by a 40g lead collection fire assay as well as multi acid digest with an Inductively Coupled Plasma (ICP) Optical Emission Spectrometry finish for multi elements</p> <p>The lab randomly inserts analytical blanks, standards and duplicates into the client sample batches for laboratory QAQC performance monitoring.</p> <p>AS2 also inserted Certified Reference Material (CRM) samples and certified blanks, to assess the accuracy and reproducibility of the results.</p> <p>All of the QAQC data has been statistically assessed to determine if results were within the certified standard deviations of the reference material. If required a batch or a portion of the batch may be re-assayed. (no re-assays required for the data in the release).</p>
Verification of sampling and assaying	<ul style="list-style-type: none"> <li>The verification of significant intersections by either independent or alternative company personnel.</li> <li>Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</li> <li>Discuss any adjustment to assay data.</li> </ul>	<p>An internal review of results was undertaken by Company personnel. No independent verification was undertaken at this stage.</p> <p>Validation of both the field and laboratory data is undertaken prior to final acceptance and reporting of the data.</p> <p>Quality control samples from both the Company and the Laboratory are assessed by the Company geologists for verification. All assay data must pass this data verification and quality control process before being reported.</p>
Location of data points	<ul style="list-style-type: none"> <li>Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</li> </ul>	<p>Samples were collected and GPS located in the field using a hand-held GPS with roughly a 2-4m error.</p>
Data spacing and distribution	<ul style="list-style-type: none"> <li>Data spacing for reporting of Exploration Results.</li> <li>Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</li> <li>Whether sample compositing has been applied.</li> </ul>	<p>The soil samples were collected on a 500m x 500m grid</p>
Orientation of data in relation to geological structure	<ul style="list-style-type: none"> <li>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</li> </ul>	<p>Not Applicable</p>

<b>Criteria</b>	<b>JORC Code explanation</b>	<b>Commentary</b>
Sample security	<ul style="list-style-type: none"> <li>The measures taken to ensure sample security.</li> </ul>	All samples were collected and accounted for by AS2 employees or contractor personnel. All samples were bagged into calico bags. The appropriate manifest of sample numbers and a sample submission form containing laboratory instructions were submitted to the laboratory. Any discrepancies between sample submissions and samples received were routinely followed up and accounted for.
Audits or reviews	<ul style="list-style-type: none"> <li>The results of any audits or reviews of sampling techniques and data.</li> </ul>	No audits have been conducted on the historical data to our knowledge. NOTE: No historic Lithium data is available on this tenement.

**Section 2 Reporting of Exploration Results (Criteria listed in the preceding section also apply to this section.)**

<b>Criteria</b>	<b>JORC Code explanation</b>	<b>Commentary</b>
Mineral tenement and land tenure status	<ul style="list-style-type: none"> <li>Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</li> <li>The security of the tenure held at the time of reporting along with any known impediments to obtaining a license to operate in the area.</li> </ul>	The Red Peak project area is considered poorly explored and highly prospective for lithium pegmatites as well as base metals, uranium and Rare Earth Elements. Notably, several pegmatites are already identified on 1:100,000 scale geological maps. However, only limited historical exploration has occurred and focused on either gold or base metals (Pb / Zn). Extensive pegmatite outcrop can be observed from the surface data, with at least eleven pegmatites mapped across the project, exhibiting strike lengths in excess of 3km and widths of between 150m and 200m. These are significant pegmatites that warrant further investigation, given the fertility of the geological setting. There is significant exploration upside at the Red Peak project, given the prior focus on gold and base metal mineralisation. The mapping completed by the WA Geological Survey has resulted in the mapping of extensive pegmatite fields across the Red Peak project area. This is a distinct strategic advantage for the Company. The focus will now shift towards developing the surface mineralisation model for conventional LCT (Lithium-Caesium-Tantalum) pegmatites. Further geological review is required for the Red Peak project in relation to the REE potential

Criteria	JORC Code explanation	Commentary
Exploration done by other parties	<ul style="list-style-type: none"> <li>Acknowledgment and appraisal of exploration by other parties.</li> </ul>	Limited exploration of Lithium and REE in this region. No drilling for Lithium or REE has been previously reported.
Geology	<ul style="list-style-type: none"> <li>Deposit type, geological setting and style of mineralisation.</li> </ul>	<p>The region has been deformed and metamorphosed at medium to high grade, intruded by granite and pegmatite, and then deformed and metamorphosed at medium to high grade. Parts of the region (the Yarlarweelor Gneiss Complex) were yet further deformed and metamorphosed at low to medium grade during the Capricorn Orogeny at 1830–1780 Ma, and intruded by voluminous granite sheets and dykes.</p> <p>Carbonatite dykes and lamprophyre dykes, which have been identified in diamond exploration, are probably common and could have been emplaced at this time.</p> <p>The Yilgarn represents the deepest and most severely weathered region in Australia. Large tracts are covered by a considerable regolith thickness, dominated by sand plains, laterite and transported sedimentary cover.</p> <p>The tenement is covered extensively by laterite, which is being eroded into unconsolidated sand, silt and gravel in braided steams and broad alluvial sheet-wash and colluvial plains. The presence of this regolith can commonly be a major impediment to exploration, but here monazite is concentrated in the alluvial areas and REE probably is enriched in the lateritic regolith, so regolith is the primary exploration target.</p> <p>The Errabiddy Shear Zone, a 5km to 20km wide major crustal suture that binds the accreted Palaeoproterozoic Glenburgh terrane to the Archaean Yilgarn Craton. Such reworked craton margins are a favourable setting for many large-scale gold and base metal deposits, where long-lived crustal-scale structures can act as conduits for the transfer of heat and mineralising fluids from the upper mantle. The structural corridor associated with the Errabiddy Shear Zone offers the Company further significant gold exploration opportunities.</p>
Drill hole Information	<ul style="list-style-type: none"> <li>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</li> </ul>	Not Applicable
Data aggregation methods	<ul style="list-style-type: none"> <li>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</li> </ul>	Not Applicable

Criteria	JORC Code explanation	Commentary
	<ul style="list-style-type: none"> <li>Where aggregate intercepts incorporate short lengths of high-grade results and longer lengths of low-grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</li> </ul>	
Relationship between mineralisation widths and intercept lengths	<ul style="list-style-type: none"> <li>These relationships are particularly important in the reporting of Exploration Results.</li> <li>If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</li> </ul>	Not Applicable
Diagrams	<ul style="list-style-type: none"> <li>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</li> </ul>	Diagrams are included in the body of the document.
Balanced reporting	<ul style="list-style-type: none"> <li>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of results.</li> </ul>	All results reported are exploration results in nature.
Other substantive exploration data	<ul style="list-style-type: none"> <li>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</li> </ul>	Assessment of other substantive exploration data is not yet complete; however, it is considered immaterial at this stage.
Further work	<ul style="list-style-type: none"> <li>The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).</li> </ul>	Follow-up work programmes will be subject to the interpretation of recent and historical results, which is ongoing and as set out in the announcement.
