magnetic resources NL

BEST INTERSECTION 23M AT 6.3G/T FROM 317M IN NORTHERN PART OF LJN4

- **The 400m northern part of the 750m long LJN4 deposit plunges to the SE and is much larger than previously estimated and is bigger than the southern silica pyrite and breccia zone. The dimension of this impressive northern zone is at least 600m down the SE plunge direction, at least 650m down dip and up to 200m long. This zone keeps expanding and deeper holes 54 and 55 are planned (Fig. 1).**
- **Outstanding intersections continue, MLJDD042 has 23m at 6.29g/t from 317m, which includes 6m at 12.23g/t from 319m and includes 13m at 5.08g/t from 327m. MLJDD042 is 100m up dip from MLJDD048 with 25m at 3.86g/t from 386m (Figs 2 and 4).**
- **MLJDD039 has intersected 26m at 2.49g/t from 567m, which includes 10m at 3.13g/t from 571m and is 250m down dip from MLJDD044 with 16m at 1.99g/t from 359m and 13m at 2.02g/t from 393m. (Figs 3 and 4).**
- **The high-grade intersection in MLJDD042 is characterised by bleached, intensely silicified and quartz-veined ultramafic. Some of the higher grades are associated with the appearance of bright green fuchsite alteration, chalcedonic silica veins and in some places, breccia. The intersection in MLJDD039 is similar in appearance but without the chalcedonic veins. The strongly altered gold rich zones are shown in the diamond core trays on pages 10-13.**
- **The intersection in MLJDD039 (which is our deepest intersection to date starting at 567m vertically) is far below the open pit from our PFS study (ASX release 7 March 2024) and is not included in our current resource. This auger well for the enlargement of the resource, increasing both the potential size of the open pit and now for the first time looking at the underground mining potential of LJN4. An updated economic study is planned.**
- **In addition, the assays are pending for 4 diamond holes MLJDD049, 51, 52 and 53. A further 5 diamond holes MLJDD054-58 for 2300m are planned**.
- **As described in the 5 March 2024 ASX release there was a 7.7% increase in overall resource in the Laverton Project to 24.9Mt @1.66g/t totalling 1.33moz of gold at 0.5g/t cut off and LJN4 has increased 11% to 948,200 oz (Table 1). Due to the very promising enlargement of the northern zone, we have commenced a resource upgrade.**
- **Interestingly, similarly to other world class multi- million-ounce deposits in the Laverton region, we have already identified 8 stacked lodes in the central part of LJN4. We have now completed a 717m hole below these stacked lodes and results are pending.**

Level 1, 44A Kings Park Road, West Perth WA 6005 **T** +61 (0) 8 9226 1777
PO Box 1388, West Perth WA 6872 **ABN** 34 121 370 232

The central and northern part of the 750m long LJN4 deposit has been drilled with very promising results. Highlights of this drilling are shown in Table 4, Figures 1-4.

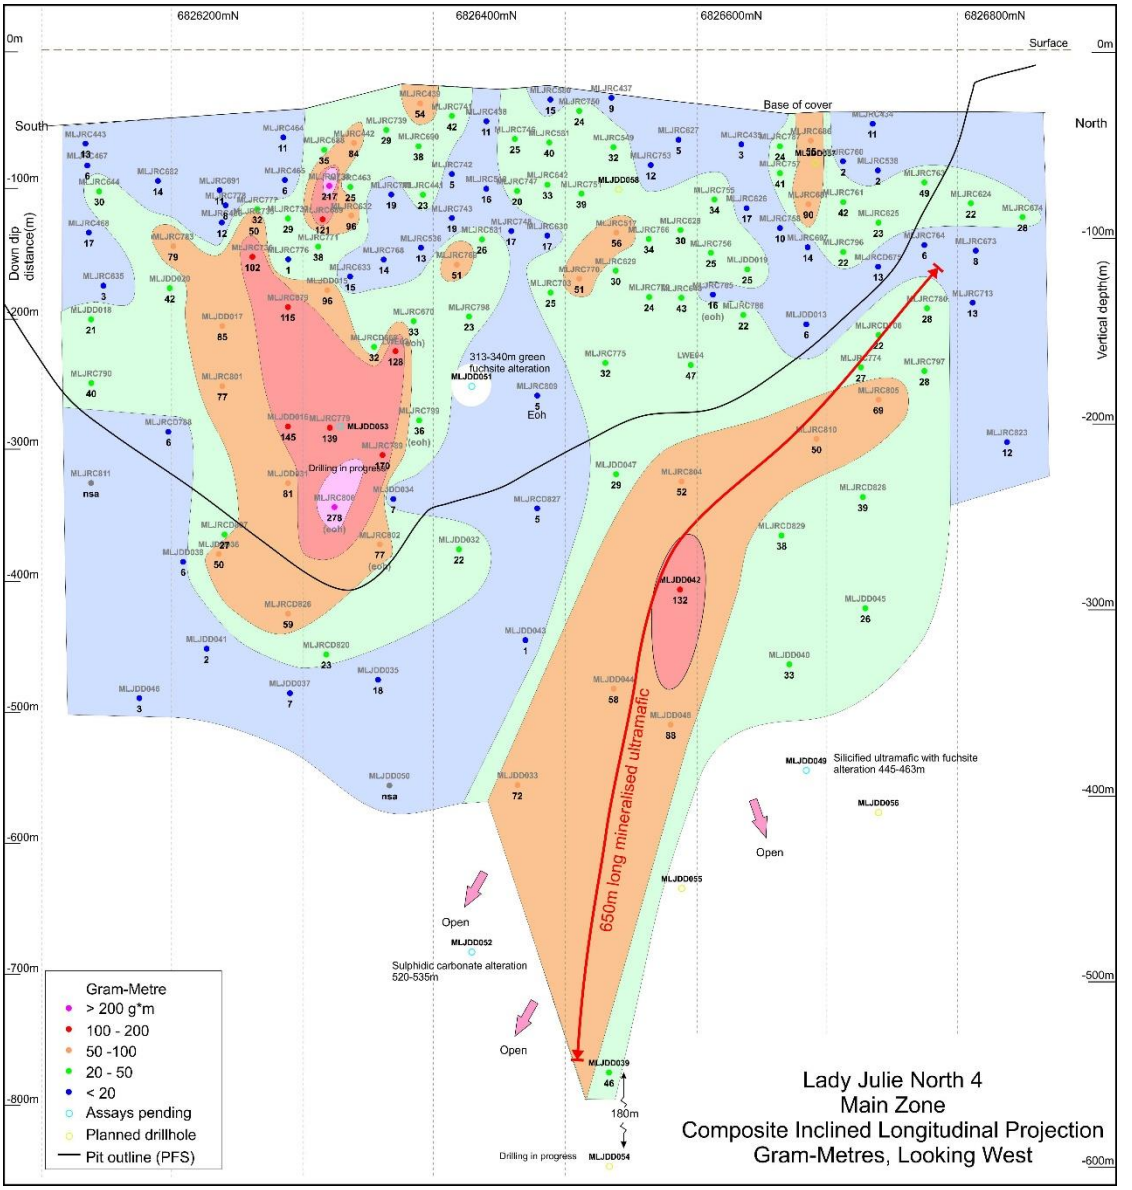

Figure 1. Composite Inclined Longitudinal Projection of LJN4 in gram-metres. Highlighting continuous mineralisation over the whole 750m length, being open at depth in the central area and showing a 600m long SE plunging zone. New drilled holes awaiting assays (in blue) and further planned holes (in yellow).

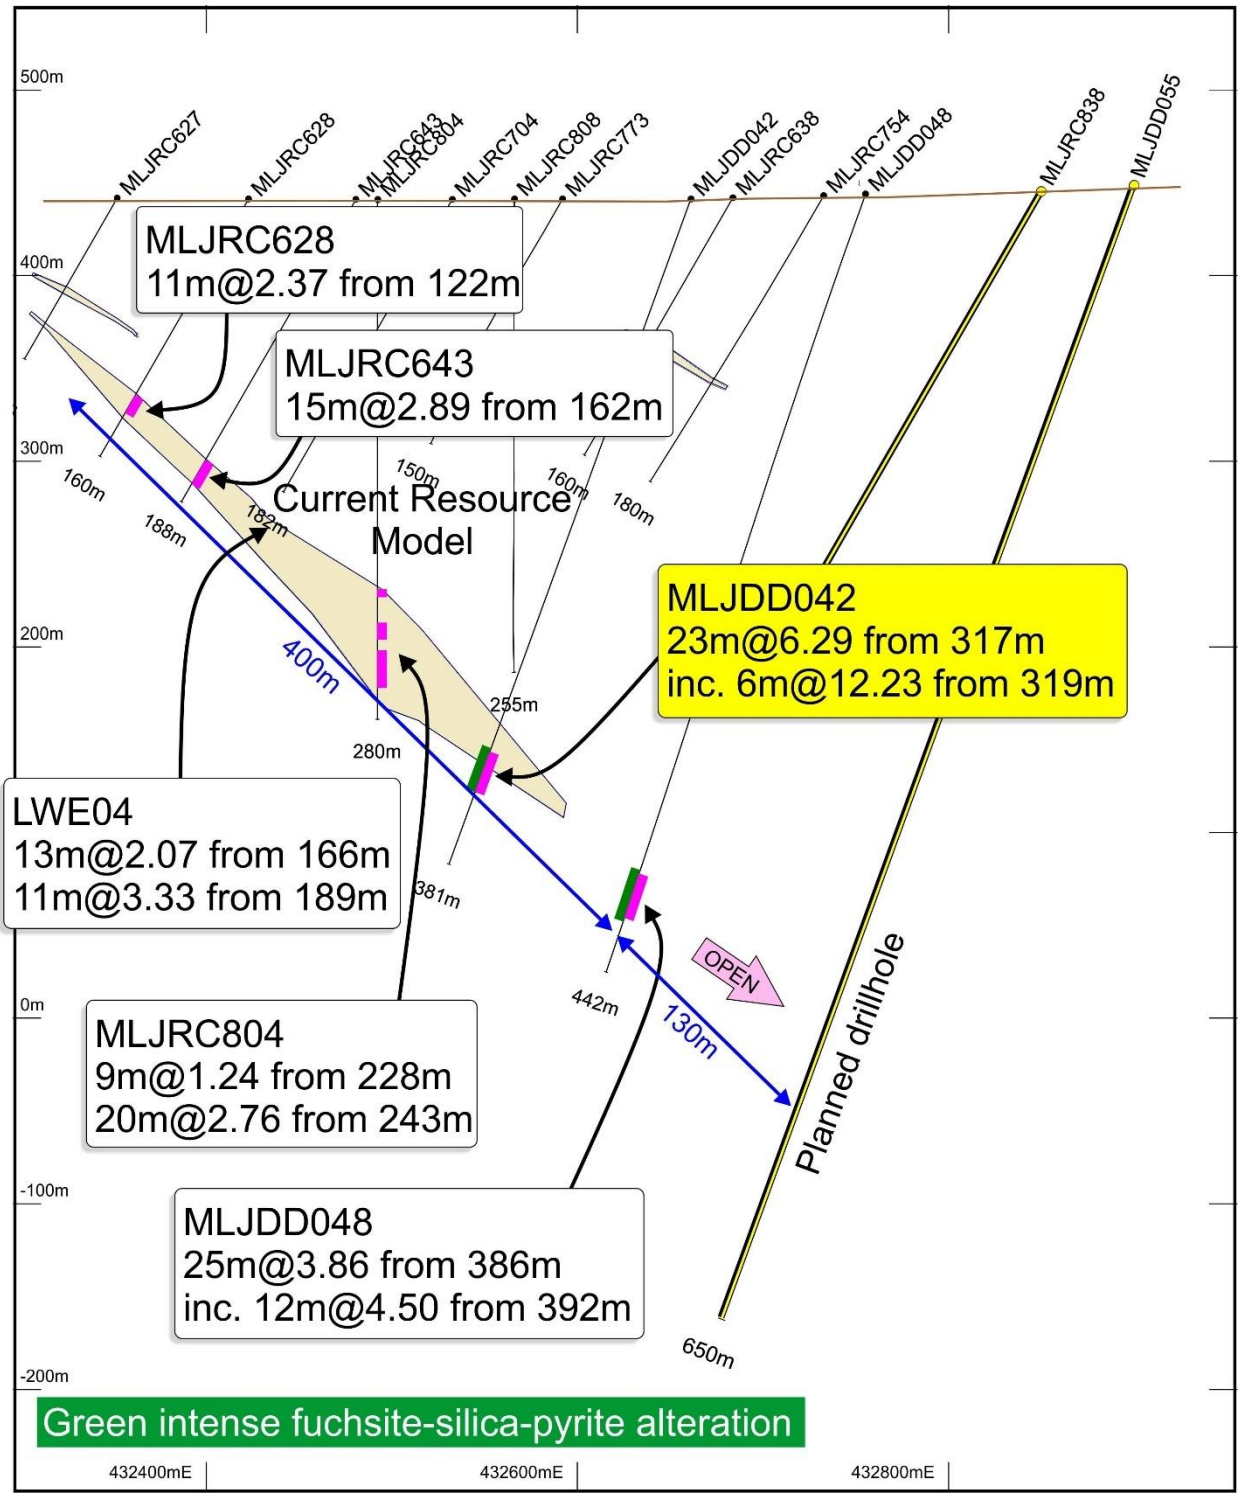

Figure 2. Cross section for LJN4 northern area showing high-grade dipping gold zone containing resource model outline and MLJDD048 being a down dip extension of 130m with intense fuchsite alteration.

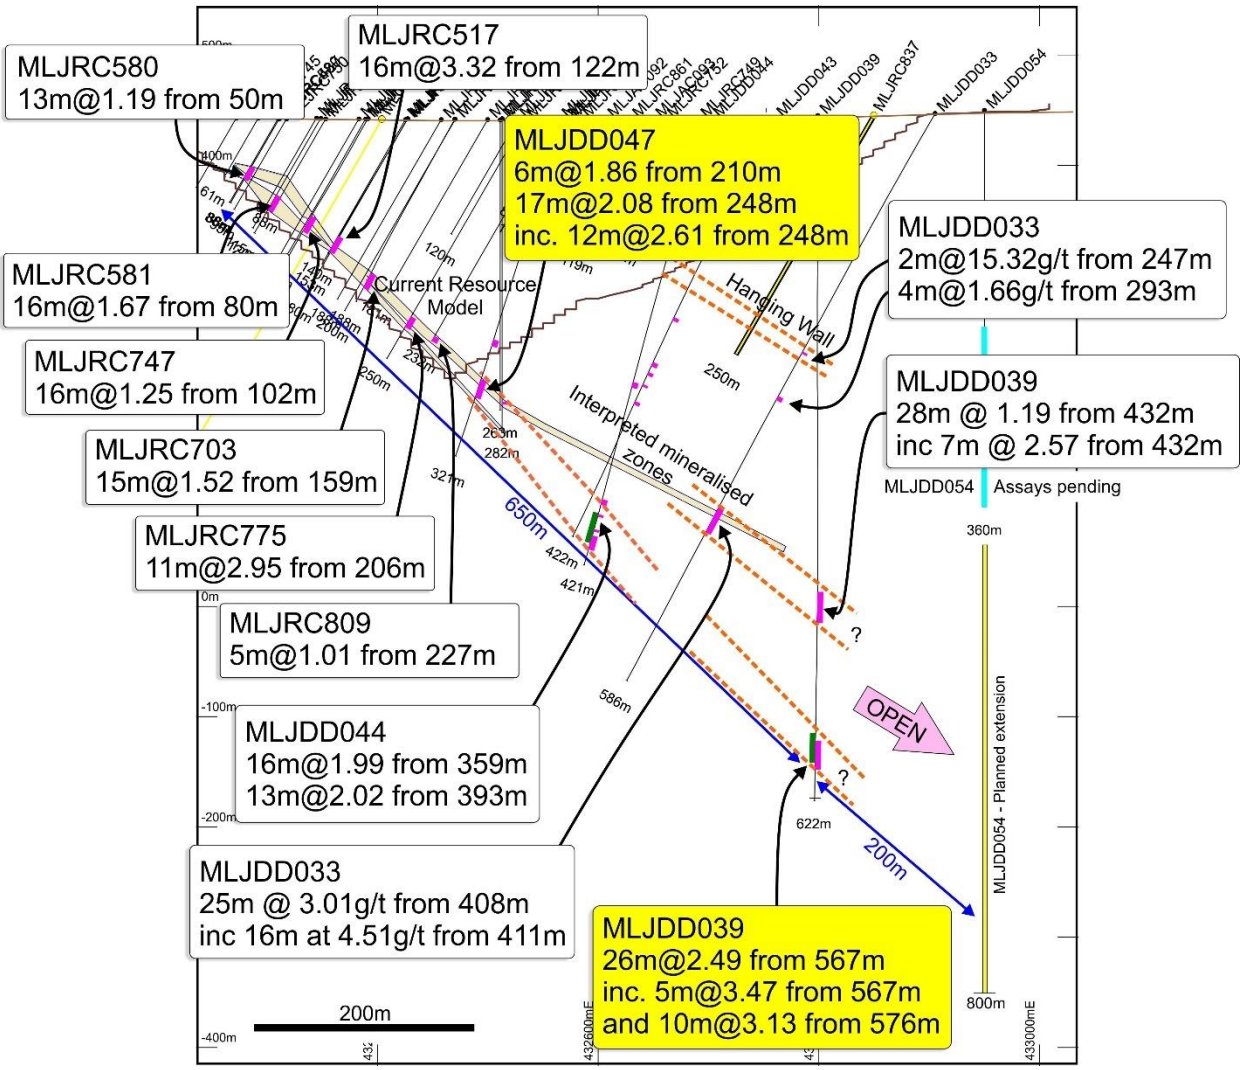

Figure 3. Composite section for LJN4 central area showing high-grade dipping gold zone containing resource model outline and MLJDD039, 47 and planned 54 being part of a very large 650m down dip mineralised zone.

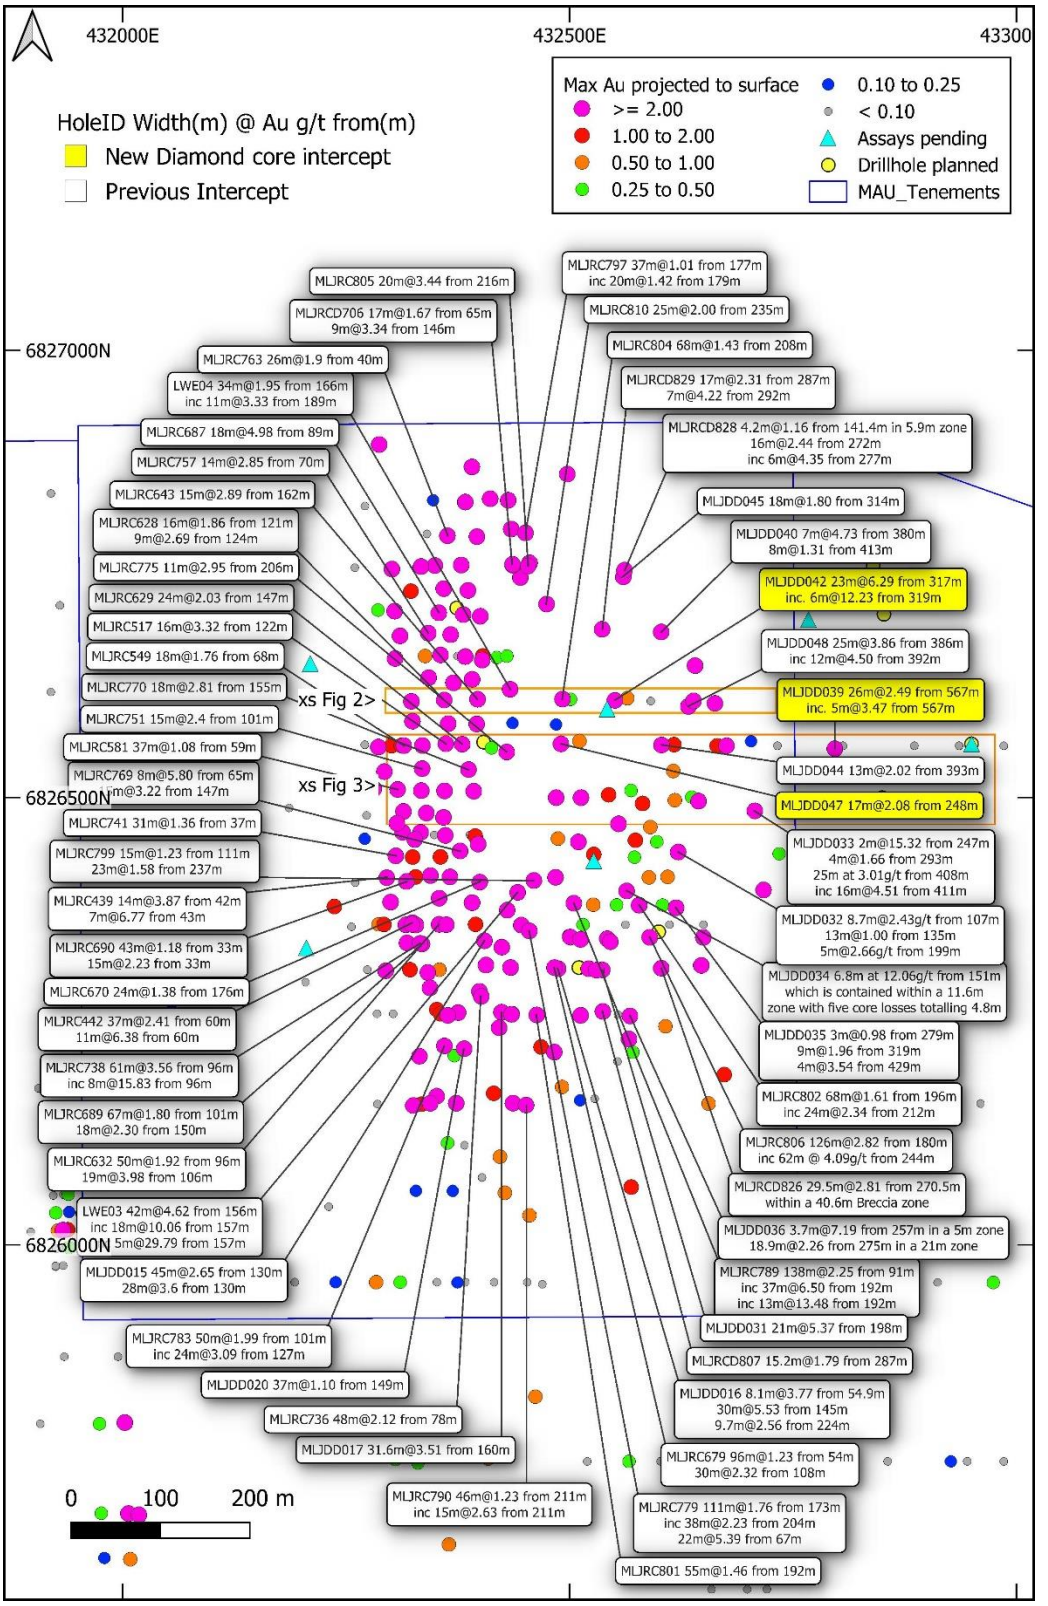

Figure 4. The Lady Julie North 4 deposit has numerous significant thick intersections from the latest drill programme (yellow large rectangular label) and previous drilling (white label) with maximum gold projected to surface and planned deeper drillholes (in yellow).

The follow up deeper diamond holes have tested and are looking to extend up to two and in some cases eight, stacked lodes mainly found in the central parts of LJN4. Hole MLJDD053 is a 714m deep hole and is designed to investigate for further stacked lodes below the current bottom stacked lode. Many of these are outside the existing resource and have potential for the enlargement of the LJN4 (Indicated and Inferred) of 15.4mt at 1.92g/t for 948,200oz at a 0.5g/t cutoff (Table 1).

The updated combined (Indicated and Inferred) Mineral Resources estimate for the whole project area (Table 2) was announced recently on 5 March 2024, "A further boost to LJN4 resource-closing in on 1moz" and include:

24.9mt @ 1.66g/t Au totalling 1,331,200oz of gold at 0.5g/t cutoff (Table 2).

Recent diamond drilling at LJN4 has revealed four distinct types of mineralisation:

- Vuggy silica and/or silica-pyrite mineralisation: this intense alteration destroys the nature of the protolith and comprises a porous network of silica veins and masses, with or without disseminated pyrite, in a clayey to sandy matrix.
- Polymictic breccia: a mixed breccia of chert, felsic porphyry, and ironstone (possibly after ferruginous or pyritic chert), sometimes with quartz or silica clasts, in a siliceous, ferruginous or pyritic matrix. The pyrite content is highly variable ranging up to semi-massive to massive in places.
- Silicified ultramafic: the footwall ultramafic sequence at LJN4 is mineralised in pale, bleached and silicified zones showing intense deformation (informally termed "visceral" texture) with or without quartz stockwork veining and with minor disseminated pyrite with some bright green fuchsite alteration and chalcedonic silica veins.
- Pyritic zones in crystalline sedimentary carbonate: This is a more subtle style of mineralisation comprising disseminations and irregular stringers of pyrite in the chert-carbonate sequence overlying the footwall ultramafics. Better intercepts of this style include 9.75m @ 2.56g/t from 224m at end of hole in MLJDD016 (section 6826310N) and 16m @ 4.51g/t from 411m in MLJDD033 (section 6826480N).

  The recent intersection of the carbonate-hosted mineralisation at depth in MLJDD033 suggests that this this style may become more important in the deeper parts of the LJN4 mineralised system, which has yet to be fully explored and defined.

  Photos of the mineralisation types are attached and some examples of both breccia mineralisation and silica pyrite alteration in the MLJDD015 core trays with an overlayed gold content for each interval of core measured. The mineralisation appears to occur in a series of moderately east-dipping (45-50°) zones ranging from a few metres up to 52 metres in true width. Sometimes these zones appear to coalesce to form broader mineralised zones. The silica-pyrite and breccia mineralisation occur in an interdigitated sequence of massive chert and carbonate intruded by felsic porphyries. This sequence also dips moderately to the east. Strong thick breccia zones are also present within the Sunrise Dam Deposit owned by Anglo Ashanti where the breccia lodes carry significant higher-grade mineralisation are associated with a number of internal deposits. In most cases they are near vertical and link the sub horizontal major shear zones and can also be subparallel to the major mineralised shear zones near surface. The

silicified ultramafic mineralisation occurs in an ultramafic unit in the footwall of the chert-carbonate sequence.

The Lady Julie North 4 deposit is only 2.5km North of the Lady Julie Central deposit which in turn is 2.5km NE of the HN9 deposit (Figure 5). These three areas are all shallow deposits and Lady Julie Central and HN9 start from surface and Lady Julie North4 from 30m depth, which provide low strip ratios and potential for economic ore that is open-cuttable and are effectively part of one mining centre.

Gold mineralisation at LJN4 is hosted in a sequence of ultramafics, massive carbonate (marble) and chert intruded by felsic porphyries. This sequence is cut by a major NS braided shear complex known as the Chatterbox Shear Zone (CSZ) which is known to host significant mineralisation to the north. Petrological studies are in progress to determine if the carbonate and chert units are in fact forms of intense carbonate and silica alteration associated with the CSZ.

The Chatterbox shear zone is a complex N to NNE-trending, east-dipping structural corridor which can be traced for some 22km extending from Magnetic Resources southern boundary at Mt Jumbo and through Lady Julie North 4 and as far north as the Beasley Creek gold deposit on Magnetic's NE boundary (Figure 6). Within Magnetic's tenements the shear zone can be traced for a distance of 12km. The shear zone is interpreted to comprise a series of braided faults and shears within a corridor ranging

from 100m to 250m wide and is interpreted to have formed as a reverse fault on the limb of the regional Margaret Anticline during the latter stages of its folding.

Importantly, this shear zone is closely associated with, gold mineralisation at several locations along its length including Magnetic's LJN4 and Mt Jumbo deposit (Figure 6). This shear is gold rich and gold deposits further north of Magnetics tenements contains the Beasley Creek and Apollo deposits and is interpreted to extend south towards the world class Wallaby deposit. It is evident in aeromagnetic imagery and in gravity images (Figure 6). Previous seismic work completed by Magnetic also shows up the Chatterbox shear which has great depth extent of this 45 degree east dipping shear with a number of associated vertical faults.

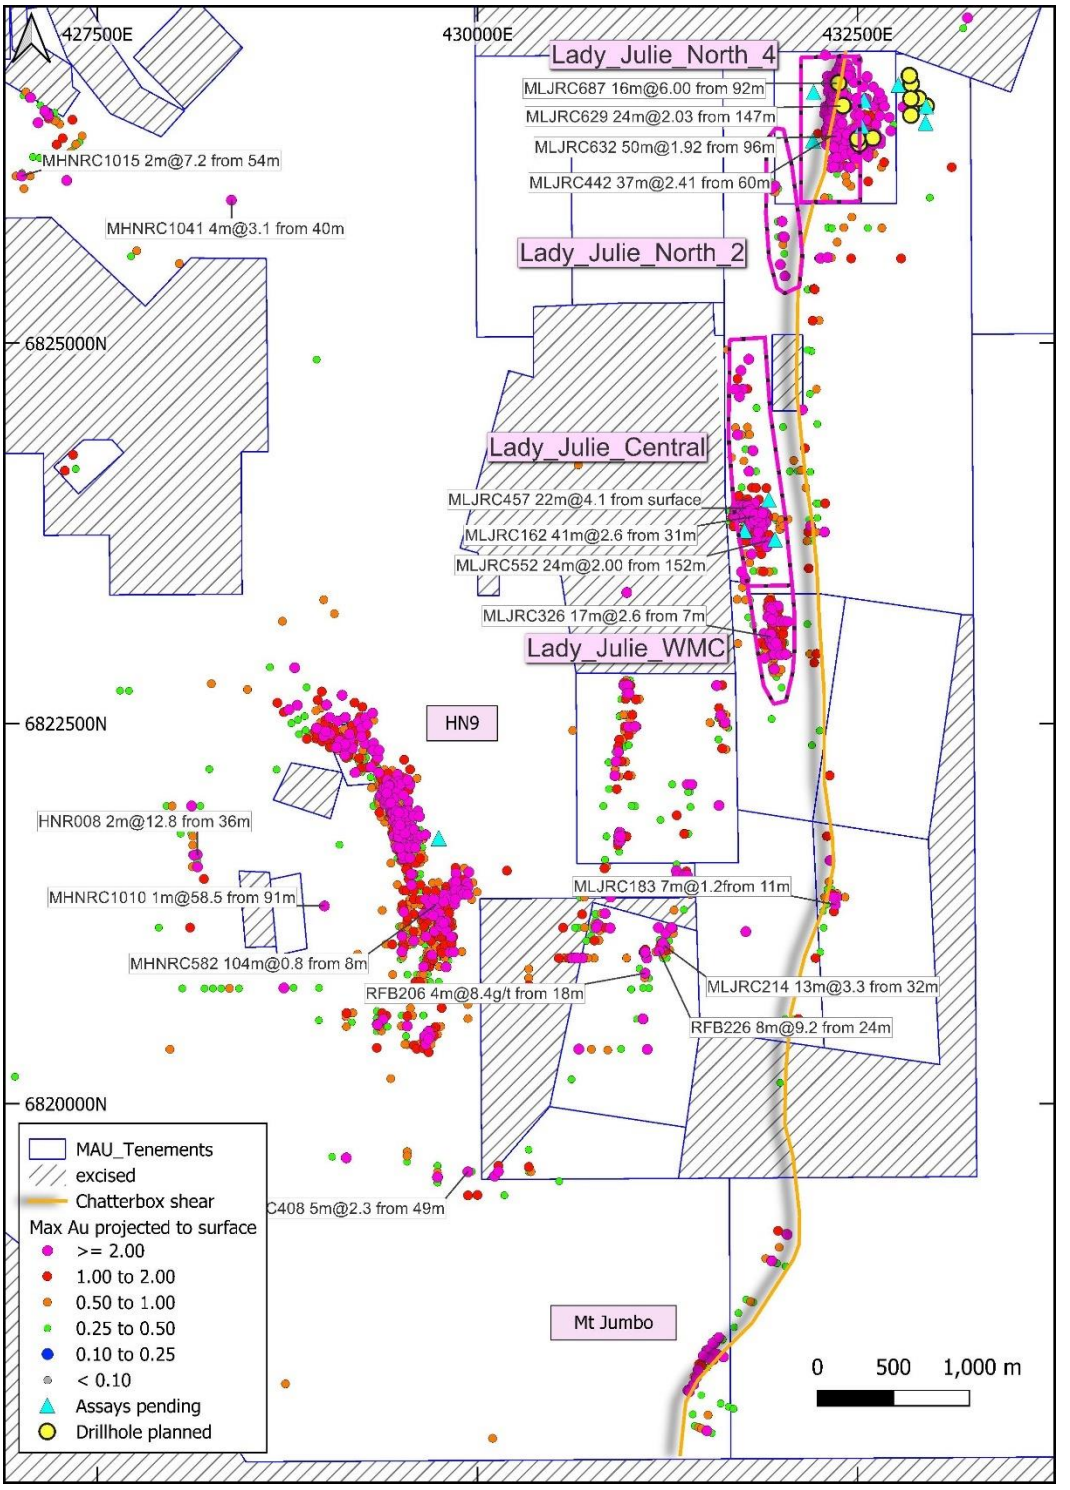

Figure 5. Gold intersection overview covering the Lady Julie North4, Lady Julie Central, Lady Julie WMC, HN9 and Mt Jumbo Projects showing some highlighted intersections (white label), significant historical and Magnetic intercepts (maximum Au projected to surface), planned holes in yellow and highlighted Chatterbox shear extending south from the Lady Julie North 4 Deposit.

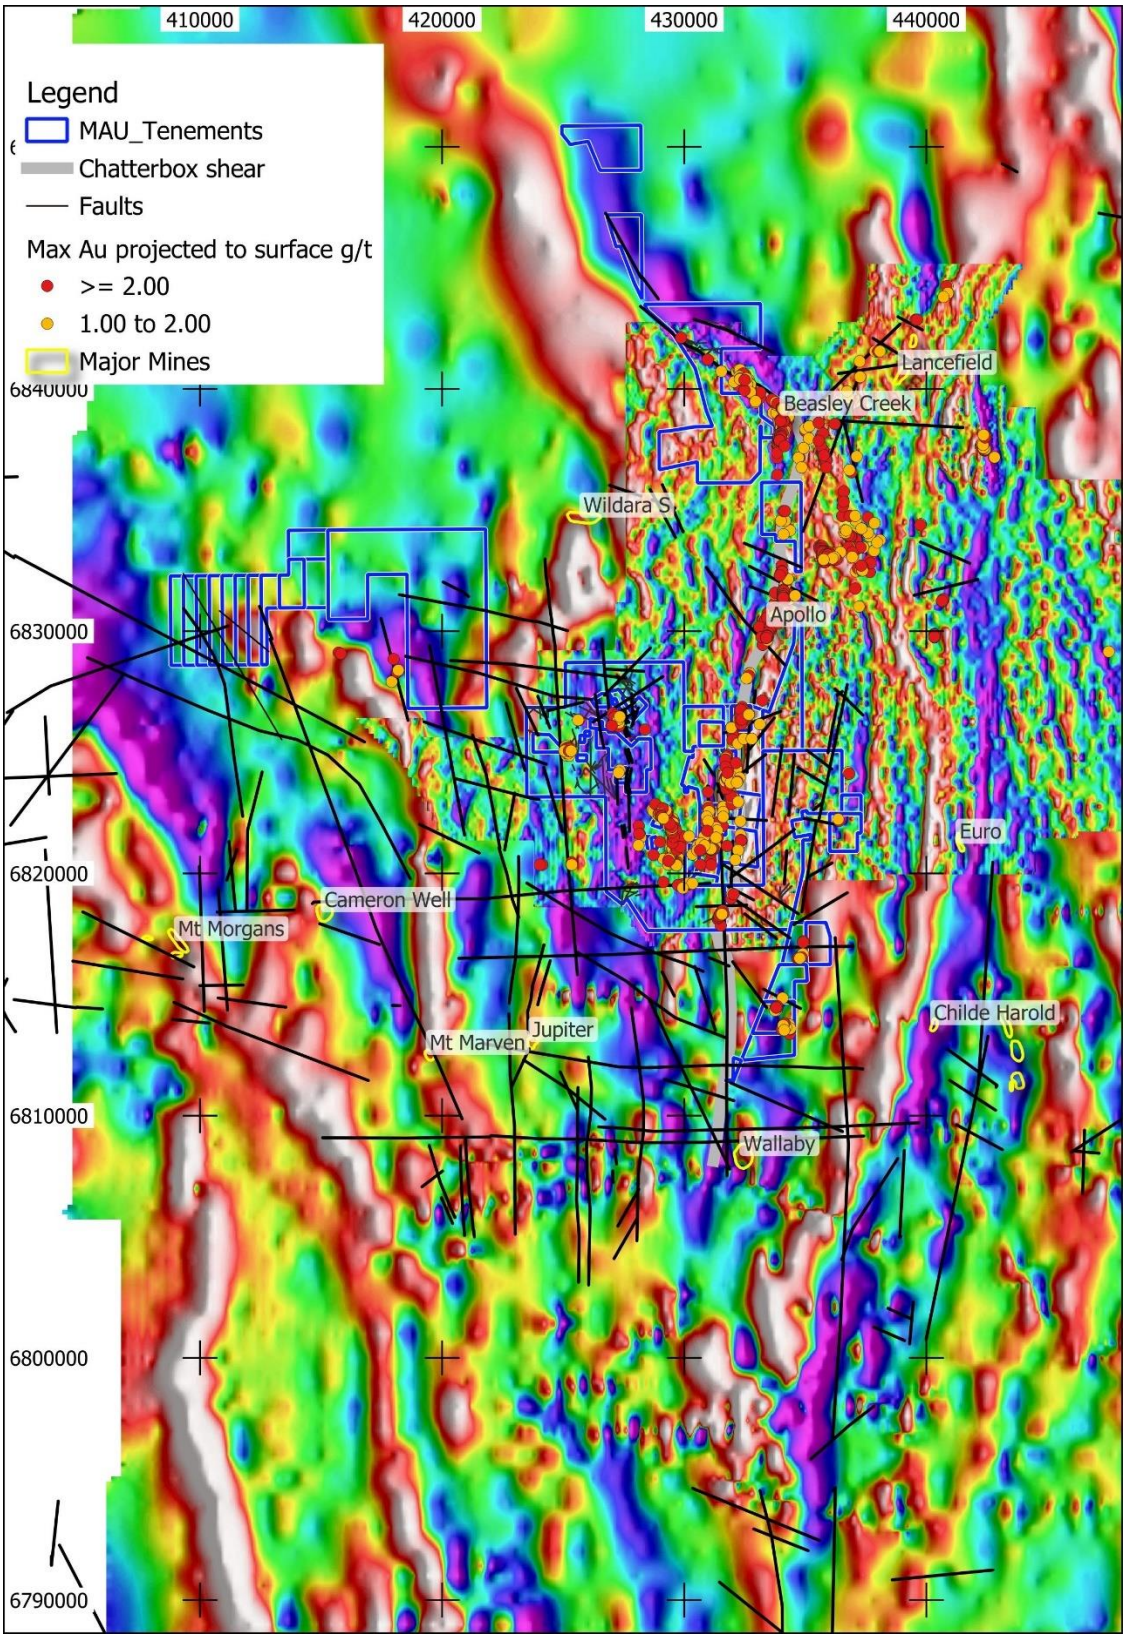

Figure 6. The Lady Julie North 4 Chatterbox Interpreted Shear shown on a Gravity image with major gold deposits.

Magnetic confirms that it is not aware of any new information or data that materially affects the information included in that announcement and, in relation to the estimates of Magnetic's Mineral Resources, that all material assumptions and technical parameters underpinning the estimates in the announcement continue to apply and have not materially changed. Magnetic confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from that announcement.

Within the HN5, HN6, HN9 and Lady Julie areas there are many new shallow intersections (Figures 1-4 and Table 4) with a total of 2,753 intersections (ranging from 1 to 44m) greater than 0.5g/t Au, which includes 1,312 greater than 1g/t Au, 506 greater than 2g/t Au, 263 greater than 3g/t Au and 164 greater than 4g/t Au.

At Hawks Nest 5, 6, 9 and Lady Julie extensive drilling programmes have been completed. (Tables 5 and Appendix), including 1,917 RC/RCD holes totalling 151,599m (average 79m depth), 37,948 1–5m

composites and 26,252 1m splits, 302 AC holes totalling 12,125m, 3,049 2-6m composites and 294 1m splits and 38 Diamond holes totalling 13,774m 8,878 core samples, the Geotech programme comprising 10 RC/RCD drillholes totalling 670m and 10 diamond holes totalling 1,205m and Hydrology programme comprising 6 RC drillholes totalling 874m.

This release is reporting on 865 1m diamond core samples from 5 Diamond drillholes (DDH) totalling 2,210m (MLJDD039 491-621m, MLJDD042 190-381m, MLJDD047, MLJDD048 100-262m and MLJDD050).

There are also assays pending for 4 DDH diamond drillholes MLJDD049, 51, 52 and 54.

Diamond drillholes MLJDD054 extension and MLJDD055-58 are planned.

The nearby Sunrise Dam, Wallaby and Jupiter Gold Deposits have persistent internal shallow-dipping mineralised lodes that are often called shear zones or thrust zones, which are ubiquitous throughout these deposits and have been defined down to 1500m depth at the Wallaby deposit. At Sunrise Dam there are breccia zones which are associated with the deeper vertical deposits and also some of the shallower dipping deposits near surface. In addition, many discoveries in recent times have been made by drilling below 100m because the historical drilling was far too shallow. At HN5, 6, 9 and Lady Julie the average hole depth is only 79m providing tremendous scope for upside potential.

Managing Director George Sakalidis commented: “With the Australian gold price at record levels of $3470 the Laverton Project Resources encompassing Lady Julie Central, Lady Julie North 4, HN9, Mt Jumbo and Homeward Bound South, are shaping up and have potential for large-scale shallow open-cuttable deposits and now after our recent drilling with strong depth potential now greater than 400m depth at LJN4 (ASX releases 7/08/23, 31/07/23, 14/08/23, 22/08/23, 8/09/2023, 26/09/2023 , 19/10/2023, 2/11/2023, 31/01/2024, 29/02/2024, 5/03/2024, 7/03/2024, 10/04/2024), 13/06/2024.

A 400m long northern ultramafic zone has been extended at depth and is part of a very large 600m SE plunging zone that is up to 200m long and is still being tested further at depth with holes 54 and 55. This zone has intense green fuchsite-silica-pyrite alteration, which has been intersected in holes MLJDD39,40, 42, 44, 45, 47, 48 and 51. This northern mineralised zone is now bigger than the promising southern breccia silica-pyrite stacked zones and still growing. Hole 44 is one of our best intersections with 23m at 6.29g/t from 317m and further detailed drilling is being planned near this hole.

As a result of these promising results and extensions in the northern zone a new resource study has commenced, which will be followed by an updated economic study which will take into account the rising commodity prices.

It is particularly interesting that we have 8 stacked lodes in the central part of LJN4 and we have one deep hole completed to 714m depth that is testing for stacked lodes beneath the current mineralised stacked lodes and results are pending.

This is an exciting time for the company having announced its Expanded Mineral Resource on 5 March 2024 and its PFS study on 7 March 2024 and now looking to further increase the size the LJN4 Resource by further deep drilling.

Concurrently, the Blue Cap studies are near completion, which provides the company with the ability to fast-track work mining approvals. Continuing with global investment bank Jefferies, who are helping ongoing review opportunities to maximise shareholder value.”

Table 3. Planned/in-progress Drilling at Lady Julie North 4

Hole_ID	Easting MGAz51	Northing MGAz51	Depth metres	Dip degrees	Azimuth degrees	Hole Type	Tenement	Project Area

The information in this report that relates to exploration results including visual estimates is based on information compiled by George Sakalidis BSc (Hons), who is a member of the Australasian Institute of Mining and Metallurgy. George Sakalidis is a Director of Magnetic Resources NL. George Sakalidis has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. George Sakalidis consents to the inclusion of this information in the form and context in which it appears in this report.

The Information in this report that relates to:

1. Promising 200m wide 0.7g/t soil geochemistry associated with extensive 1km long NS porphyries at newly named Hawks Nest 9. MAU ASX Release 15 October 2018
2. 1.1km NNW Mineralised Gold Intersections at HN9. MAU ASX Release 7 November 2018
3. Surface drilled Mineralisation extends to significant1.5km at HN9. MAU Release 20 November 2018
4. Hawks Nest Delivers with 8m@4.2g/t Gold from 4m MAU Release 29 January 2018
5. Robust Near Surface High-grade Zone of 7m @ 4.5g/t Gold from 5m from 1m splits. MAU Release 5 March 2018
6. Hawks Nest Geochemical Survey Outlines Potential Extensions to the Prospective 7m @ 4.5g/t Gold Intersected. MAU Release 20 March 2018
7. An 865m RC drilling programme started testing promising 7m at 4.5g/t gold and eight separate anomalous soil geochemical targets at HN5. MAU Release 10 May 2018
8. Large Gold Mineralised Shear Zone Greater Than 250m at Hawks Nest 5. MAU Release 9 June 2018
9. Gold Geochemical Target Zone Grows to Significant 2km in Length at HN9. MAU Release 7 January 2019
10. Significant 2km Gold Target is open to the East on 83% of the 24 Lines Drilled at HN9. MAU Release 4 February 2019
11. Significant 2.1km Gold Target Still open to North, South, East and at Depth. MAU Release 25 March 2019
12. Gold Target Enlarged By 47% to Significant 3.1km and is still open to the North, East and at Depth. MAU Release 22 May 2019
13. HN9 Prospective Zone Enlarged by 170% with Lady Julie Tenements. MAU Release 24 June 2019
14. 200m-Wide Gold Zone Open to The Northeast and Very Extensive Surface Gold Mineralisation Confirmed at HN9 Laverton. MAU Release 27 June 2019

15. 200m Wide Gold Zone Open to the North and New 800m Anomalous Gold Zone defined at HN9 Laverton. MAU Release 4 September 2019
16. Highest Grades Outlined at HN9 and are being Followed Up and Lady Julie Shallow Drilling Commencing Shortly. MAU Release 14 October 2019
17. Central Part of HN9 Shows Significant Thickening of The Mineralised Zone to 28m. MAU Release 28 November 2019
18. Multiple Silicified Porphyry Horizons from Deep Drilling and 57m Mineralised Feeder Zone at MAU Release 17 January 2020
19. Very High-Grade Intersection of 4m at 49g/t Adjacent to 70m Thick Mineralised Feeder Zone MAU Release 5 February 2020
20. 20 km of thickened porphyry units outlined by ground magnetic interpretation at Hawks Nest 9. MAU Release 9 March 2020
21. Further Thick Down Plunge Extensions and NW Extension Shown up at HN9. MAU Release 18 May 2020
22. Four Stacked Thickened Porphyry Lodes at HN9. MAU Release 3 August 2020
23. High-Grade Intersections in Thickened Zone at HN9. MAU Release 18 September 2020
24. Follow up of 16m at 1.16g/t gold from 64m at Lady Julie MAU Release 2 November 2020
25. Shallow Seismic searching for multiple thickened lodes MAU Release 16 November 2020
26. New thicken zone in southern part of Hawks Nest 9. MAU Release 1 December 2020
27. Two RC rigs now operating at HN9 and Lady Julie. MAU Release 11 January 2020
28. Nine gold targets defined over 14km at HN5, HN6, HN9 and Lady Julie. MAU Release 3 June 2021
29. Lady Julie delivers with 38m at 3.6g/t gold from 32m. MAU Release 23 June 2021
30. Lady Julie North expanded with purchase of tenements. MAU Release 8 June 2021
31. Multiple thick and high-grade zones located at Lady Julie. MAU Release 16 August 2021
32. Multiple thick high-grade intersections from surface at Lady Julie. MAU Release 14 September 2021
33. Thick high-grade intersections are open to the southeast at Lady Julie. MAU Release 22 October 2021
34. High-grade intersections and vertical shoots at Lady Julie. MAU Release 10 January 2022
35. Thicker intersections continue to grow Lady Julie1 and 4 and Homeward Bound. MAU Release 21 February 2022
36. Ten high priority targets & thick intersections – Lady Julie. MAU Release 12 April 2022
37. Second parallel mineralised structure at Lady Julie Central. MAU Release 11 May 2022
38. Lady Julie North 4 delivers with thick intersections. MAU Release 30 May 2022
39. Maiden Mineral Resource Estimate. MAU Release 27 June 2022
40. Thick 56m at 2.2g/t gold at Lady Julie North 4. MAU Release 20 July 2022
41. Drilling commences at Lady Julie North 4. MAU Release 15 August 2022
42. Blue Cap Mining to undertake early works. MAU Release 14 September 2022
43. Mineralisation expands both to north and east at Lady Julie North 4. MAU Release 27 September 2022
44. Early Works progress at Laverton Project. MAU Release 24 October 2022
45. High grade thick intersections at Lady Julie projects. MAU Release 17 November 2022
46. Thickest intersections to date at Lady Julie North 4. MAU Release 21 December 2022
47. Positive metallurgical results from Lady Julie. MAU Release 25 January 2023
48. Expands mineral resource estimate. MAU Release 3 February 2023
49. Early works good progress at Laverton project. MAU Release 15 February 2023
50. Thick intersections remain open at depth at Lady Julie North 4. MAU Release 20 February 2023
51. Thickest intersection of 96m at 1.23g/t Au at Lady Julie North 4. MAU Release 11 April 2023
52. Further thick intersections and deeper drilling completed at Lady Julie North 4. MAU Release 14 June 2023
53. Best thick intersections to date of 60m at 3.6g/t from 96m at lady Julie North 4. MAU Release 23 June 2023
54. High-grade of 30m at 5.53g/t within 52m thick breccia zone. MAU Release 14 July 2023
55. Intersection of 31m at 3.5g/t from 160m extends Lady Julie. MAU Release 31 July 2023
56. 112m at 1.8g/t gold from 172m extends Lady Julie North 4. MAU ASX Release 7 August 2023
57. 40m at 7.2g/t Au from 192m extends Lady Julie North 4. MAU ASX Release 22 August 2023
58. 50m thick gold rich breccia and silica pyrite zones at LJN4. MAU ASX Release 8 September 2023
59. Thick intersections extend mineralised zones at Lady Julie North 4. MAU ASX Release 26 September 2023
60. Best thick intersection to date 126m at 2.8g at LJN4. MAU ASX Release 19 October 2023
61. Large Grade-Thickness Zone Highlighted at LJN4. MAU ASX Release 2 November 2023
62. Significant 107% increase of Resource at Laverton Project. MAU Release 23 November 2023
63. Mining Lease Application over the Lady Julie North 4 Deposit. MAU ASX Release 13 December 2023
64. 550m Down Dip Extension at Lady Julie North 4(updated). MAU ASX Release 31 January 2024
65. Deep intersections continue over the length of Lady Julie. MAU ASX Release 29 February 2024
66. A further Boost to LJN4 resource closing in on 1Moz. Mau ASX Release 5 March 2024
67. Outstanding value demonstrated by PFS at Lady Julie Project. MAU ASX Release 7 March 2024
68. LJN4 Continues to Deliver with Deepest Intersection at 650m. MAU ASX Release 10 May 2024
69. LJN4 Northern Zone Grows to Over 600m Down Plunge. MAU ASX Release 13 June 2024

All of which are available on www.magres.com.au

This announcement contains forward-looking statements which involve a number of risks and uncertainties. These forward-looking statements are expressed in good faith and believed to have a reasonable basis. These statements reflect current expectations, intentions or strategies regarding the future and assumptions based on currently available information. Should one or more of the risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary from the expectations, intentions and strategies

described in this announcement. No obligation is assumed to update forward-looking statements if these beliefs, opinions and estimates should change or to reflect other future developments.

Table 4. HN5, 6, 9 and Lady Julie Significant Drilling Intercepts Gold >1g/t with >2g/t highlighted.

* New assay

JORC Code, 2012 Edition – Table 1 report

Section 1 Sampling Techniques and Data
(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
Sampling techniques	• *Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.* • *Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.* • *Aspects of the determination of mineralisation that are Material to the Public Report.* • *In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.*	• For RAB sampling, 1m completed by Duketon (A22722) • For RAB sampling, 4m composites completed by Gwalia (A29728) • For AC sampling, 4m composites and 1m splits completed by Metex (A62445, A72419) • For RC sampling, 2m composites completed by Julia Mines (A18060) and 5m composites completed by Placer (A34935) • All the reported historical drilling and their relevant sampling procedures, QAQC and analytical methods etc. are referred to in the original WAMEX reports (references in the main text of ASX release of 7 November 2018). • The targets at Lady Julie and HN9 have been tested by RC drilling and more recently at Lady Julie by diamond drilling. • Sampling and QAQC procedures are carried out using Magnetic's protocols as per industry sound practice. • RC drilling was used to obtain bulk 1 metre samples from which composite 4m samples were prepared by spear sampling of the bulk 1m samples. 3kg of the composite sample was pulverized to produce a 50g charge for fire assay for gold. The assay results of the composite samples are used to determine which 1m samples of 3kg taken from the rig's cyclone and splitter are selected for fire assay using the same method. The cyclone and splitter are cleaned regularly to minimize contamination. • Diamond drill core was cut in half and 1m intervals submitted for fire assay using the same method as the RC drill samples.
Drilling techniques	• *Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).*	• Rotary air blast (RAB) drilling with a blade bit. • Reverse Circulation (RC) drilling was carried out using a face sampling hammer with a nominal diameter of 140mm. • Aircore (AC) drilling with a 100mm diameter blade bit. • Diamond drilling using a standard NQ tube. Core was oriented where practicable using a gyroscopic tool.
Drill sample recovery	• *Method of recording and assessing core and chip sample recoveries and results assessed.* • *Measures taken to maximise sample recovery and ensure representative nature*	• RC sample recoveries are visually estimated qualitatively on a metre basis.

Criteria	JORC Code explanation	Commentary
	of the samples. • *Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.*	• Various drilling additive (including muds and foams) have been used to condition the RC holes to maximize recoveries and sample quality. • Diamond drill core recoveries are measured and recorded. • Insufficient drilling and geochemical data is available at the present stage to evaluate potential sample bias. Drill samples are sometimes wet which may result in sample bias because of preferential loss/gain of fine/coarse material.
Logging	• *Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.* • *Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.* • *The total length and percentage of the relevant intersections logged.*	• Lithology, alteration and veining is recorded and imported into the Magnetic Resources central database. The logging is of sufficient standard to support a geological resource. • All drill holes were logged in full. • The visual identification of the breccia zone is from systematic logging of the drill core. The amount of gold mineralisation is not possible to be estimated, and metal grades can only be determined by laboratory assay. Identification of the breccia zones and estimations of the proportion of disseminated pyrite in those zones have been made by an experienced geologist.
Sub-sampling techniques and sample preparation	• *If core, whether cut or sawn and whether quarter, half or all core taken.* • *If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.* • *For all sample types, the nature, quality and appropriateness of the sample preparation technique.* • *Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.* • *Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half sampling.* • *Whether sample sizes are appropriate to the grain size of the material being sampled.*	• RC samples are cyclone split to produce a 2-3kg sample. 4m composite samples are prepared by tube sampling bulk 1m samples. • Where practicable a duplicate 1m RC samples are taken and stored on site for reference. • Sample sizes are appropriate for the grain size being sampled.
Quality of assay data and laboratory tests	• *The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.* • *For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.* • *Nature of quality control procedures*	• RC samples are assayed using a 50g charge and a fire assay method with an AAS finish which is regarded as appropriate. The technique provides an estimate of the total gold content. • Standard reference materials are routinely inserted into the sample stream submitted to the assay laboratory. • Internal standards and duplicates are used by the NATA registered laboratory conducting the analyses.

Criteria	JORC Code explanation	Commentary
	adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.	
Verification of sampling and assaying	• *The verification of significant intersections by either independent or alternative company personnel.* • *The use of twinned holes.* • *Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.* • *Discuss any adjustment to assay data.*	• No independent verification of drill intersections has yet been carried out. • Twin holes are planned to be drilled. • Primary data is entered into an in-house database and checked by the database manager. • No adjustment of assay data other than averaging of repeat and duplicate assays • No verification of historically reported drilling has been carried out
Location of data points	• *Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.* • *Specification of the grid system used.* • *Quality and adequacy of topographic control.*	• Drill collars located by hand- held GPS with an accuracy of +/- 5m and subsequently are being surveyed with a differential GPS with an accuracy of +/- 5cm. • Grid system: MGAz51 GDA94. • Topographic control using regional DEM data and over selected areas using a drone survey.
Data spacing and distribution	• *Data spacing for reporting of Exploration Results.* • *Whether the data spacing, and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.* • *Whether sample compositing has been applied.*	• RC drilling was carried out at HN9 and Lady Julie using drill spacings ranging from 40m x 20m to 20m x 20m and at LJN4 down to 20m x 10m.. • The data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource estimation procedure and classification applied. RC sample compositing into 4m composites has been used and followed up with 1m sampling where composite grades are greater than 0.2g/t Au.
Orientation of data in relation to geological structure	• *Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.* • *If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.*	• Drilling at Lady Julie and HN9 has been carried out orthogonal to strike and across a generally east-dipping sequence. Detailed structural controls at Lady Julie have yet to be confirmed but no sampling bias has been identified to date.
Sample security	• *The measures taken to ensure sample security.*	• Samples were stored in the field prior to dispatch to Perth using a commercial freight company.
Audits or reviews	• *The results of any audits or reviews of sampling techniques and data.*	• No audits or reviews of the sampling techniques and data from historical drilling have been carried out.

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
Mineral tenement and land tenure status	• *Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.* • *The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.*	• Lady Julie is situated on P38/4346 and P38/4379-4384. HN9 is situated on exploration Licence E38/3127, M38/1041 and P38/4126. All these tenements are held 100% by Magnetic Resources NL. • All the above are granted tenements with no known impediments to obtaining a licence to operate.
Exploration done by other parties	• *Acknowledgment and appraisal of exploration by other parties.*	• Lady Julie and HN9 have been subject to historical exploration, refer to text
Geology	• *Deposit type, geological setting and style of mineralisation.*	• Lady Julie: Various mineralization styles including silicified and stockworked felsic porphyry, silicified and stockworked ultramafic breccia zones mainly within carbonate and chert and silica-pyrite alteration in both felsic porphyry and ultramafic. • HN9: Two mineralization styles have been observed: quartz veining and stock working in felsic porphyries and shear-hosted quartz veins on porphyry-amphibolite contacts.
Drill hole Information	• *A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:* ○ *easting and northing of the drill hole collar* ○ *elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar* ○ *dip and azimuth of the hole* ○ *down hole length and interception depth* ○ *hole length.* • *If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.*	• Refer to table in the text of this release.
Data aggregation methods	• *In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.* • *Where aggregate intercepts incorporate short lengths of high-grade results and longer lengths of low- grade results, the procedure used for such aggregation should be stated and some typical*	• No weighting or cutting of gold values, other than averaging of duplicate and repeat analyses.

Criteria	JORC Code explanation	Commentary
	examples of such aggregations should be shown in detail. • *The assumptions used for any reporting of metal equivalent values should be clearly stated.*	
Relationship between mineralisation widths and intercept lengths	• *These relationships are particularly important in the reporting of Exploration Results.* • *If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.* • *If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').*	• Mineralisation widths at Lady Julie are interpreted to range from 70% to 80% of true width. • Mineralisation widths at HN9 are interpreted to range from 80% to 100% of true width.
Diagrams	• *Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.*	• Refer to text.
Balanced reporting	• *Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced avoiding misleading reporting of Exploration Results.*	• Plus 1g/t Au intersections from the RC drilling have been reported in this release (Table 4)
Other substantive exploration data	• *Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.*	• Metallurgical results refer to ASX Release 27/10/2020 Positive metallurgical results from Hawks Nest 9 and ASX Release 25/01/2023 Positive metallurgical results from Lady Julie.
Further work	• *The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).* • *Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.*	• Table 3 shows the drilling planned for seven diamond holes for 2840m and 2RC holes for 500m. Further deep drilling at LJN4 will be further assessed once all the results have been received from the assay lab. • As outlined in this release. • A map and table of the proposed RC drilling is shown in this release.

Appendix

Table 5. HN5, 6, 9 and Lady Julie Completed RC, AC and Diamond Drilling
