

## Discovery of extensive mineralisation at Falcon Extension – surface rock chip assays up to 2.86% Li<sub>2</sub>O

Spring prospecting program concludes with the discovery of significant mineralised pegmatite at the Falcon Extension property

### Highlights

- Rock chip assays of up to 2.86% Li<sub>2</sub>O confirm the presence of mineralised spodumene-bearing pegmatite on the Falcon Extension Property, acquired in October 2023.
- The 2024 program has built on the successful field campaigns completed last year, which confirmed the presence of high-grade spodumene mineralisation across a 5km prospective corridor at Falcon Lake.
- In addition, prospecting teams focused on mapping and prospecting under-explored regional tenure at Falcon West and Falcon East.
- The new discovery will be added to the list of priority drill targets across the 5km mineralised corridor at Falcon Lake Lithium Project, significantly enhancing the Project's exploration potential.

Battery Age Minerals Ltd (ASX: **BM8**; “**Battery Age**” or “**the Company**”) is pleased to advise that it has discovered extensive mineralised spodumene-bearing pegmatite at the Falcon Extension Property, part of its Falcon Lake Lithium Project in Ontario, Canada.

The exciting discovery stems from the Company's recently completed four-week Spring Fieldwork Program at Falcon Lake, which has significantly enhanced the exploration potential across the broader project.

The new discovery located at Falcon Extension, which was acquired late last year, adds further potential scale to the known mineralised corridor at Falcon Lake and increases the list of priority drilling targets to be tested during the upcoming summer drill program.

The focused 2024 Spring Fieldwork Program has built on successful field campaigns completed last year, which identified over 30 outcropping pegmatites and confirmed the presence of spodumene mineralisation across a 5km prospective corridor (Figure 1).

The Spring Program was designed to investigate major regional structures in favourable volcanogenic stratigraphy, focusing on areas of elevated topographic relief. In addition, the in-field team collected 379 bedrock rock chip samples (Appendix 1, Table 1) from all outcrops encountered across the Falcon East, Falcon West and Falcon Extension properties (Figure 2) including LCT pegmatite intrusions.

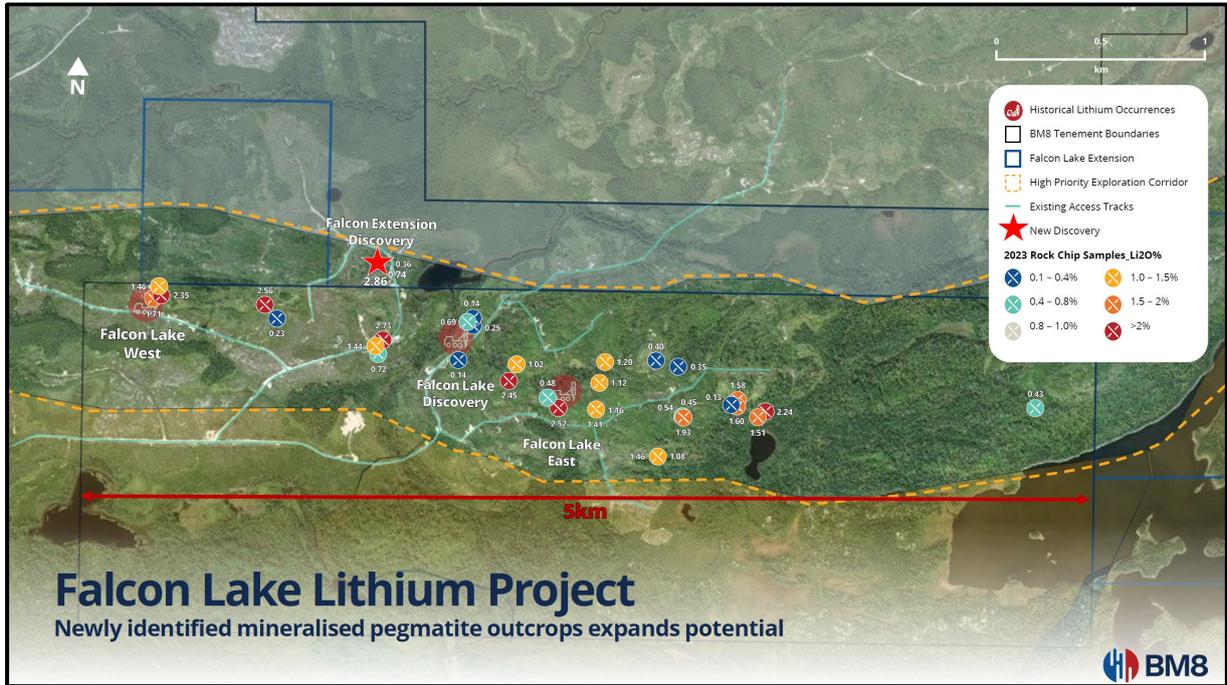

Figure 1 – Falcon Extension discovery with 2023 mineralised pegmatites at Falcon Lake.

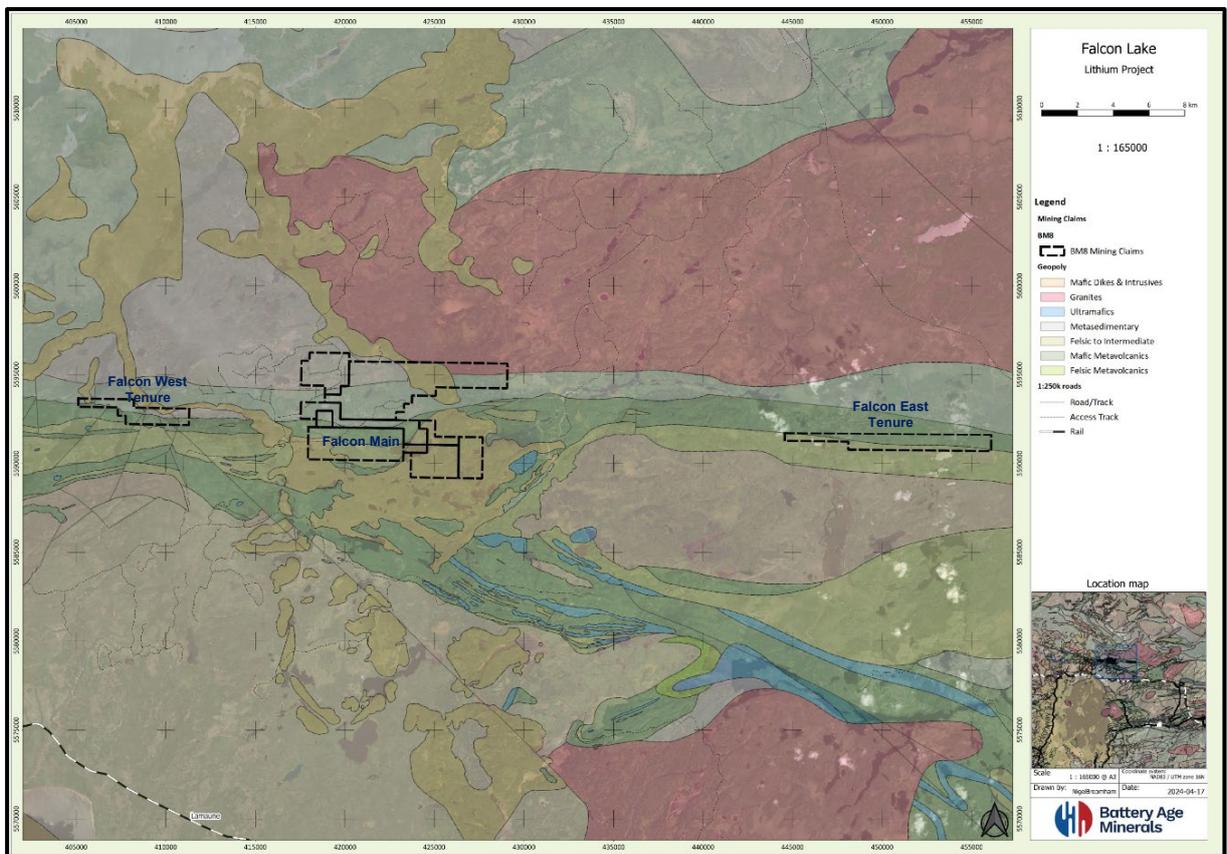

Figure 2 – BM8 Falcon Lake Lithium Project & Regional Properties.

**Battery Age CEO Nigel Broomham commented:**

*"We are very encouraged to have discovered significant surface mineralisation at Falcon Extension, which significantly enhances the broader exploration opportunity in front of us at Falcon Lake. The identification of mineralised spodumene-bearing pegmatite with rock chip assays of up to 2.86% Li<sub>2</sub>O underscores the enormous potential of this Property. Our team has successfully built on last year's field campaigns, expanding the exploration potential across the 5km prospective corridor we have defined.*

*"This latest discovery reflects the diligent efforts of our prospecting teams at Falcon West and Falcon East and further validates our exploration strategy to unlock the broader potential of the Property through systematic exploration.*

*"These priority targets will be tested as part of the upcoming summer drill program, and we are very much looking forward to what that drilling program will uncover as we continue to work hard to unlock the full potential of the Falcon Lake Project."*

## **Competent Person Statement**

The information in this Report that relates to Geological Data and Exploration Results for the Falcon Lake Lithium Project is based on, and fairly represents, information and supporting documentation compiled and reviewed by Mr Nigel Broomham (BSc (Hons) Geology & Resource Economics) who is a Member of the Australasian Institute of Mining and Metallurgy (AusIMM) and holds a Professional Certificate in JORC Code Reporting. Mr Broomham is the Chief Executive Officer of Battery Age Minerals. Mr Broomham has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Broomham consents to the inclusion in this report of the matters based on information in the form and context in which they appear. Mr Broomham holds securities in the Company.

## **Compliance Statement**

This report contains information on the Falcon Lake Project extracted from an ASX market announcement dated 8 December 2022, 2 February 2023, 13 June 2023, 26 July 2023, 2 August 2023, 16 August 2023, 6 September 2023, 14 September 2023, 5 October 2023, 10 October 2023, 16 October 2023, 25 October 2023, 1 November 2023, 30 November 2023 and 13 December 2023 released by the Company and reported in accordance with the 2012 edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves" (JORC Code). The original market announcements are available to view on [www.batteryage.au](http://www.batteryage.au) and [www.asx.com.au](http://www.asx.com.au). Battery Age is not aware of any new information or data that materially affects the information included in the original market announcement.

## **Forward-Looking Statement**

This announcement may contain certain forward-looking statements and projections. Such forward looking statements/projections are estimates for discussion purposes only and should not be relied upon. Forward looking statements/projections are inherently uncertain and may therefore differ materially from results ultimately achieved. Battery Age Minerals Limited does not make any representations and provides no warranties concerning the accuracy of the projections and disclaims any obligation to update or revise any forward-looking statements/projects based on new information, future events or otherwise except to the extent required by applicable laws. While the information contained in this report has been prepared in good faith, neither Battery Age Minerals Limited or any of its directors, officers, agents, employees or advisors give any representation or warranty, express or implied, as to the fairness, accuracy, completeness or correctness of the information, opinions and conclusions contained in this announcement.

*Table 1 – 2023 Falcon Lake Prospecting Rock Chip Samples - UTM Grid: NAD83\_Z16N*

## Appendix 2 – JORC CODE, 2012 EDITION – TABLE 1

### Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
<b>Sampling techniques</b>	<ul style="list-style-type: none"> <li>• Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</li> <li>• Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</li> <li>• Aspects of the determination of mineralisation that are Material to the Public Report.</li> <li>• In cases where ‘industry standard’ work has been done this would be relatively simple (eg ‘reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay’). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</li> </ul>	<ul style="list-style-type: none"> <li>• Samples reported in this release are surface rock chips collected from various rock types across the projects area.</li> <li>• The intent was to collect representative samples from the outcrops, however rock chip samples, by nature cannot be considered as “representative”</li> <li>• Samples collected were between 0.5kg and 3kg in weight.</li> </ul>
<b>Drilling techniques</b>	<ul style="list-style-type: none"> <li>• Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</li> </ul>	<ul style="list-style-type: none"> <li>• No drilling results are referred to in this announcement</li> </ul>
<b>Drill sample recovery</b>	<ul style="list-style-type: none"> <li>• Method of recording and assessing core and chip sample recoveries and results assessed.</li> <li>• Measures taken to maximise sample recovery and ensure representative nature of the samples.</li> <li>• Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.</li> </ul>	<ul style="list-style-type: none"> <li>• No drilling results are referred to in this announcement</li> </ul>
<b>Logging</b>	<ul style="list-style-type: none"> <li>• Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.</li> </ul>	<ul style="list-style-type: none"> <li>• Rock chips were collected as part of a detailed surface geological mapping program. Qualitative field logging of</li> </ul>

<b>Criteria</b>	<b>JORC Code explanation</b>	<b>Commentary</b>
	<ul style="list-style-type: none"> <li>• Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.</li> <li>• The total length and percentage of the relevant intersections logged.</li> </ul>	<p>the rocks have been completed in the field by qualified Geologists.</p>
<b>Sub-sampling techniques and sample preparation</b>	<ul style="list-style-type: none"> <li>• If core, whether cut or sawn and whether quarter, half or all core taken.</li> <li>• If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.</li> <li>• For all sample types, the nature, quality and appropriateness of the sample preparation technique.</li> <li>• Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.</li> <li>• Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling.</li> <li>• Whether sample sizes are appropriate to the grain size of the material being sampled.</li> </ul>	<ul style="list-style-type: none"> <li>• No field sub-sampling techniques were employed.</li> <li>• The intent was to collect representative samples from the outcrops, however rock chip samples, by nature cannot be considered as “representative” and must be noted that by nature, pegmatites have variable grain size and mineralogy.</li> <li>• Samples collected were between 0.5kg and 3kg in weight.</li> <li>• Sample preparation was completed by AGAT Laboratories</li> </ul>
<b>Quality of assay data and laboratory tests</b>	<ul style="list-style-type: none"> <li>• The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.</li> <li>• For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.</li> <li>• Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.</li> </ul>	<ul style="list-style-type: none"> <li>• Samples have been submitted to AGAT laboratories.</li> <li>• AGAT is an internationally certified independent service provider. Industry standard assay quality control techniques will be used for lithium related elements.</li> <li>• Samples are submitted for multi-element ICP analysis.</li> <li>• Sodium Peroxide Fusion is used followed by combined ICP-OES and ICP-MS analyses (58 elements).</li> </ul>
<b>Verification of sampling and assaying</b>	<ul style="list-style-type: none"> <li>• The verification of significant intersections by either independent or alternative company personnel.</li> <li>• The use of twinned holes.</li> <li>• Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</li> <li>• Discuss any adjustment to assay data.</li> </ul>	<ul style="list-style-type: none"> <li>• No verification of sampling and assaying have been completed by BM8 to date.</li> <li>• Selected sample results which are considered to be significant will be subjected to resampling by the company in the future.</li> </ul>
<b>Location of data points</b>	<ul style="list-style-type: none"> <li>• Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</li> <li>• Specification of the grid system used.</li> </ul>	<ul style="list-style-type: none"> <li>• Sample coordinate positions in Tables 1&amp; 2 have been located by handheld GPS.</li> <li>• The grid datum is NAD83 Zone 16N.</li> </ul>

Criteria	JORC Code explanation	Commentary
	<ul style="list-style-type: none"> <li>• <i>Quality and adequacy of topographic control.</i></li> </ul>	
<b>Data spacing and distribution</b>	<ul style="list-style-type: none"> <li>• <i>Data spacing for reporting of Exploration Results.</i></li> <li>• <i>Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</i></li> <li>• <i>Whether sample compositing has been applied.</i></li> </ul>	<ul style="list-style-type: none"> <li>• <i>Sample spacing has been determined solely by geological mapping and no grade continuity is implied.</i></li> <li>• <i>No sample compositing has been applied.</i></li> </ul>
<b>Orientation of data in relation to geological structure</b>	<ul style="list-style-type: none"> <li>• <i>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</i></li> <li>• <i>If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.</i></li> </ul>	<ul style="list-style-type: none"> <li>• <i>No known sampling bias has been introduced.</i></li> </ul>
<b>Sample security</b>	<ul style="list-style-type: none"> <li>• <i>The measures taken to ensure sample security.</i></li> </ul>	<ul style="list-style-type: none"> <li>• <i>At all times samples were in the custody and control of the Company's representatives until delivery to the laboratory where samples are held in a secure enclosure pending processing.</i></li> </ul>
<b>Audits or reviews</b>	<ul style="list-style-type: none"> <li>• <i>The results of any audits or reviews of sampling techniques and data.</i></li> </ul>	<ul style="list-style-type: none"> <li>• <i>No external audit has been undertaken at this stage.</i></li> </ul>

## Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
<b>Mineral tenement and land tenure status</b>	<ul style="list-style-type: none"> <li>• <i>Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</i></li> <li>• <i>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</i></li> </ul>	<ul style="list-style-type: none"> <li>• <i>All claims relating to the Falcon Lake Lithium Project minerals claims are in good standing</i></li> <li>• <i>Please refer to the company prospectus (dated 2nd Feb 2023) Annexure A, Table 3:1 for full table of Falcon Lake mineral claims. The company currently holds a 90% interest in the lower Falcon Central claims with the option to increase to 100%. The company holds a 100% interest in the upper Falcon Central, Falcon East and Falcon West claims.</i></li> <li>• <i>Please refer to the company announcement dated 10</i></li> </ul>

Criteria	JORC Code explanation	Commentary
		<p><i>October 2023, Appendix B for full table of Falcon Extension minerals claims and acquisition option terms. The company currently holds a 40% interest in the Falcon Extension mineral claims with an option to acquire up to 100% interest in the mineral claims over a 3 staged option.</i></p> <ul style="list-style-type: none"> <li>• <i>No known impediments.</i></li> </ul>
<b>Exploration done by other parties</b>	<ul style="list-style-type: none"> <li>• <i>Acknowledgment and appraisal of exploration by other parties.</i></li> </ul>	<ul style="list-style-type: none"> <li>• <i>British Canadian Lithium Mines Ltd (“BCLM”) completed diamond drill (DD) holes in 1956. No core or collars have been located.</i></li> <li>• <i>Canadian Ore Bodies completed 3 DD holes in 2010.</i></li> <li>• <i>Argonaut Resources NL drilled six holes in 2016. Core and collars have been located.</i></li> <li>• <i>A summary of historical exploration activities is included in the Independent Geologists Report within the Company’s Prospectus (dated 2<sup>nd</sup> Feb 2023) Annexure A.</i></li> </ul>
<b>Geology</b>	<ul style="list-style-type: none"> <li>• <i>Deposit type, geological setting and style of mineralisation.</i></li> </ul>	<ul style="list-style-type: none"> <li>• <i>The Falcon Lake Project is underlain by Archean supracrustal and plutonic rocks of the Eastern Wabigoon Sub-province of the Superior Province along the northern edge of Lake Nipigon</i></li> <li>• <i>The Falcon Lake Pegmatite Group consists of several pegmatite dykes that intrude amphibolitised mafic meta-volcanic rocks.</i></li> <li>• <i>These pegmatites are spodumene-subtype and are tantalum-rich.</i></li> </ul>
<b>Drill hole Information</b>	<ul style="list-style-type: none"> <li>• <i>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</i> <ul style="list-style-type: none"> <li>○ <i>easting and northing of the drill hole collar</i></li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• <i>All drill hole collar locations and mineralised intercepts have been previously reported for all holes completed to date.</i></li> <li>• <i>No relevant data has been</i></li> </ul>

<b>Criteria</b>	<b>JORC Code explanation</b>	<b>Commentary</b>
	<ul style="list-style-type: none"> <li>○ elevation or RL (<i>Reduced Level – elevation above sea level in metres</i>) of the drill hole collar</li> <li>○ dip and azimuth of the hole</li> <li>○ down hole length and interception depth</li> <li>○ hole length.</li> <li>● <i>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</i></li> </ul>	<ul style="list-style-type: none"> <li>● <i>excluded from this report.</i></li> </ul>
<b>Data aggregation methods</b>	<ul style="list-style-type: none"> <li>● <i>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</i></li> <li>● <i>Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</i></li> <li>● <i>The assumptions used for any reporting of metal equivalent values should be clearly stated.</i></li> </ul>	<ul style="list-style-type: none"> <li>● <i>All results listed in Table 1.</i></li> <li>● <i>No metal equivalent values are reported.</i></li> </ul>
<b>Relationship between mineralisation widths and intercept lengths</b>	<ul style="list-style-type: none"> <li>● <i>These relationships are particularly important in the reporting of Exploration Results.</i></li> <li>● <i>If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</i></li> <li>● <i>If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg ‘down hole length, true width not known’).</i></li> </ul>	<ul style="list-style-type: none"> <li>● <i>No drilling results or intercepts are referred to in this announcement</i></li> </ul>
<b>Diagrams</b>	<ul style="list-style-type: none"> <li>● <i>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</i></li> </ul>	<ul style="list-style-type: none"> <li>● <i>Appropriate plan views are included.</i></li> </ul>
<b>Balanced reporting</b>	<ul style="list-style-type: none"> <li>● <i>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.</i></li> </ul>	<ul style="list-style-type: none"> <li>● <i>All results are reported.</i></li> </ul>
<b>Other substantive exploration data</b>	<ul style="list-style-type: none"> <li>● <i>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test</i></li> </ul>	<ul style="list-style-type: none"> <li>● <i>All previous exploration data completed to date have been reported by BM8 and within the Independent Geologists Report within the Company’s Prospectus</i></li> </ul>

<b>Criteria</b>	<b>JORC Code explanation</b>	<b>Commentary</b>
	<i>results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</i>	<p><i>(dated 2<sup>nd</sup> Feb 2023).</i></p> <ul style="list-style-type: none"> <li><i>No other substantive exploration data is available at this time.</i></li> </ul>
<b>Further work</b>	<ul style="list-style-type: none"> <li><i>The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).</i></li> <li><i>Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</i></li> </ul>	<ul style="list-style-type: none"> <li><i>Further work planned at Falcon Lake Lithium Project includes exploration drilling, field mapping, geochemistry, geophysics and prospecting works.</i></li> </ul>
