

ASX Announcement

30 JULY 2024

JUNE 2024 QUARTERLY ACTIVITIES REPORT

Proposed merger with PNX Metals progressing and on track for Scheme Meeting on 27 August 2024. Encouraging results from deep drilling at Cardina Gold Project. Shareholders approve change of company name to Patronus Resources Limited.

Highlights:

- **Proposed merger announced with PNX Metals (ASX: PNX) by way of a Scheme of Arrangement, under which KIN will acquire 100% of the PNX shares on issue. The merger is set to create a diversified resource group with high-quality development and exploration assets in WA and the NT spanning gold & silver, base metals and uranium.**
- **Kin shareholders voted on 20 June to approve a change in the Company's name to "Patronus Resources Limited", with the name change becoming effective following the regulatory gazetting period (early August).**
- **The name change reflects the Company's recent transformative transactions, which have crystallised significant value for shareholders from the Company's substantial resource inventory at the Cardinia Gold Project, putting it in an enviable position in the junior resources space with a strong balance sheet and the ability to move forward with a range of exciting strategic opportunities.**
- **Deep intercepts from diamond drilling at Cardinia Hill confirm the potential for new high-grade discoveries and extensions, with assays including:**
 - **0.8m @ 20.5g/t from 129.75m in CH24DD205**
 - **5.5m @ 1.4g/t from 351m and 1m @ 5.4g/t from 359m in CH24DD205**
 - **Intercept located approximately 150m down-dip of known Cardinia Hill mineralisation**
- **Five follow-up diamond holes completed at East Cardinia for 2,500m, with results including a significant new base metal intercept at Albus:**
 - **AB24DD001: 1.8m @ 1.74% Zn, 0.01% Cu, 0.39% Pb, 28.11 g/t Ag, 0.07 g/t Au from 300.2m.**
 - **Albus VMS horizon intersected in two of three new holes, proving the base metal potential.**
- **A program of Reverse Circulation (RC) drilling commenced in June to follow-up the excellent gold results received from air-core drilling between the Rangoon and Collymore prospects in 2023. The program will also follow up the promising results at Cardinia Hill, as the deposit is open in all directions.**
- **Kin Mining is well funded, with \$83M in cash and liquid assets at Quarter-end.**

ASX Code: KIN

OVERVIEW

Kin Mining NL (**Kin or the Company**) (ASX: **KIN**) is pleased to provide an update on activities during the June 2024 Quarter both at its 100%-owned 0.932Moz (post-sale) Cardinia Gold Project (CGP or the Project), located in the heart of the Leonora district in Western Australia (Figure 1), and with other corporate and strategic activities reflecting its continued growth as a diversified resource company.

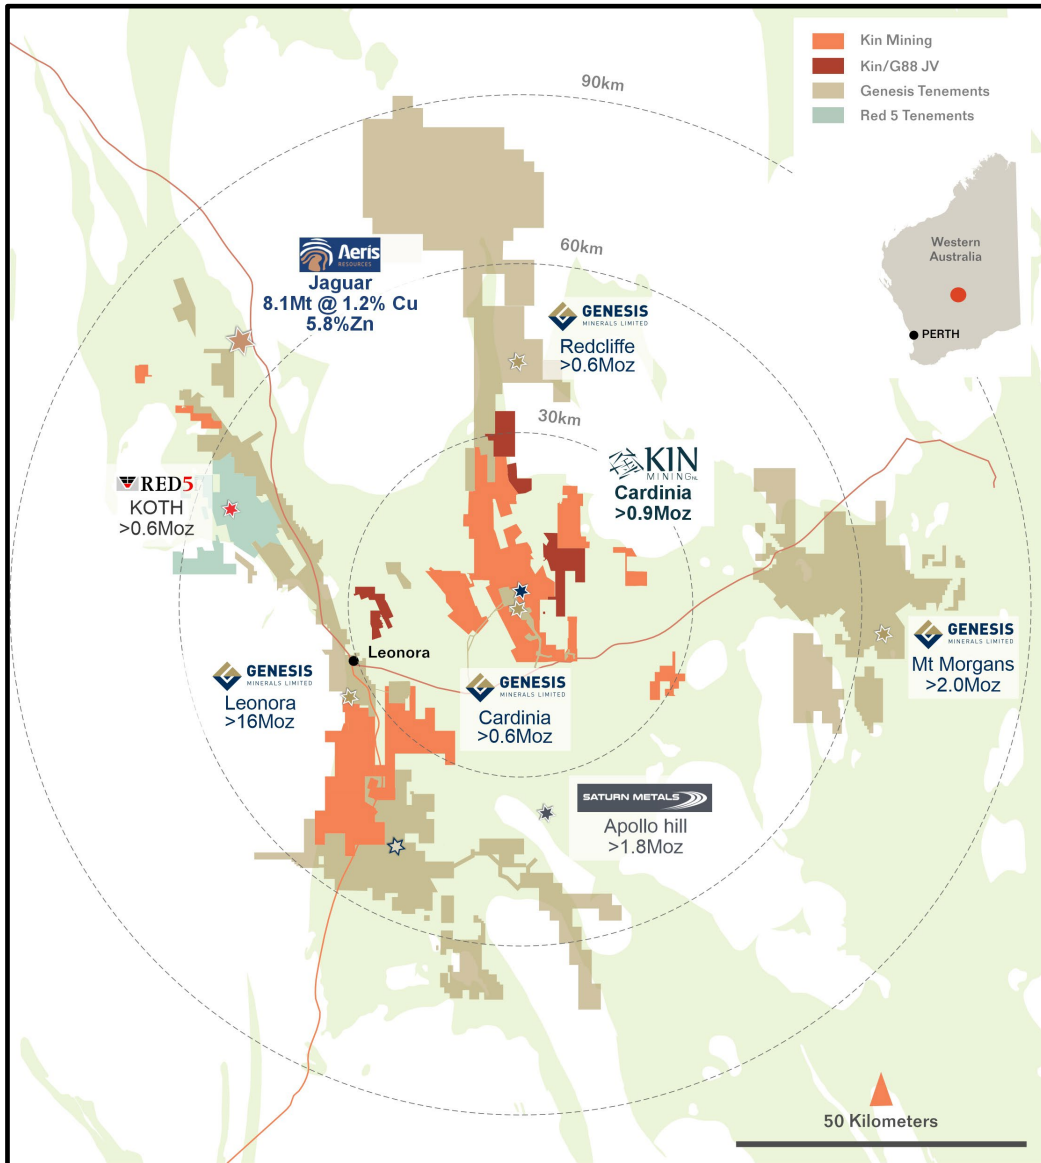

Figure 1: Location of Kin Mining’s 100%-owned tenement package and JV earn-in Projects located in the heart of the Leonora gold district, including major mineral deposits in the region. (Stated size of deposits includes historical production and current Mineral Resources.)

Kin Mining Executive Chairman, Rowan Johnston, said:

“It’s been a busy Quarter for Kin Mining, with the announcement of a proposed merger with ASX-listed PNX Metals providing the opportunity to create a diversified resource group with high-quality development and exploration assets in WA and the NT spanning gold, silver, base metals and uranium.

“PNX has a large, high-quality asset portfolio in the Pine Creek region of the Northern Territory, including development-stage zinc, gold and silver assets and a high-quality uranium deposit. We believe the combination of the two companies will deliver an exceptional platform for long-term growth, with a high-quality asset base, a strong balance sheet and no debt.

“On the exploration front, we reported positive results from deep diamond drilling at the Albus and Cardinia Hill prospects, with assays from both areas indicating compelling discovery opportunities.

“At Albus, assay results included a significant intercept of 1.8m grading 1.74% zinc, 0.39% lead, 28.11g/t silver and 0.07g/t gold providing further drill-supported evidence of a fertile VHMS environment at Cardinia.

“At Cardinia Hill, drilling intersected a new, previously unknown high-grade gold bearing structure which returned 0.8m grading 20.5g/t gold. In addition, the main Cardinia Hill gold mineralisation was confirmed over 150m below previous drilling.

“We have recently recommenced drilling at the CGP, focusing on the area between Rangoon and Collymore – where air-core drilling returned very positive results last year – as well as follow-up drilling over Cardinia Hill. We have a significant budget of over \$3 million for exploration over the remainder of this calendar year to support these extensive programs.

“Given the significant transformation of the Company over recent months – stemming from the recent transactions with Genesis Minerals, which crystallised significant value for our shareholders from the Company’s substantial resource inventory at the Cardinia Gold Project – we sought shareholder approval during the quarter to change the company name to Patronus Resources Limited.

“This change of name, which was approved by shareholders on 20 June, reflects the Company’s enviable position in the junior resources space, with a very strong balance sheet and the ability to move forward with a range of exciting strategic opportunities.”

EXPLORATION AND DEVELOPMENT STRATEGY

Kin is continuing to evaluate exploration opportunities across its tenement package, in conjunction with other consolidation, growth and strategic options within the region. Kin’s activities include exploring for additional new, higher-grade deposits, building its Mineral Resources (post-sale: 0.932Moz) and seeking opportunities to develop those deposits through value-adding processing opportunities.

A well-credentialed consultant completed a review of the extensive geological database that has been built up over many years with the aim of generating new targets. These new targets, together with extensions to known deposits, will help the Company to generate a clear growth plan moving forward.

Kin has a 667km² land-holding which it owns 100% across the under-explored Minerie Greenstone Belt, part of a region which has yielded multiple gold deposits in recent decades (Figure 1).

The CGP area (remaining following the sale of 16 tenements to Genesis completed on 8 February 2024) encompasses a +45km strike length of the Minerie Domain, which contains large alteration systems associated with several significant gold deposits. In addition, the Company has an Earn-in JV covering 145km² with G88, where Kin is earning an initial 60% interest over three years commencing in Q1 2022.

The Company is pursuing a two-pronged approach to demonstrating the value of the CGP, comprising a wide-ranging, multi-disciplinary exploration effort in parallel with near-term mining options.

The ability to monetise resources via external mining and processing options was proven by the recent sale of 610koz of gold resources to Genesis for \$88/resource oz.

The Company continues to monitor the consolidation of the Leonora / Laverton area surrounding the CGP. Kin will continue to engage with strong and successful exploration groups and regional neighbours. Regional consolidation represents a significant opportunity for Kin to grow and also monetise its current and future Mineral Resources.

EXPLORATION

During the quarter, Kin reported results from diamond drilling targeting both base metal and gold mineralisation at the CGP.

The Company completed a 5-hole, 2,498.8m diamond drilling program designed to further evaluate the VMS mineralisation at the Albus prospect (three holes), and two holes to test deep gold targets at Cardinia Hill and Helens.

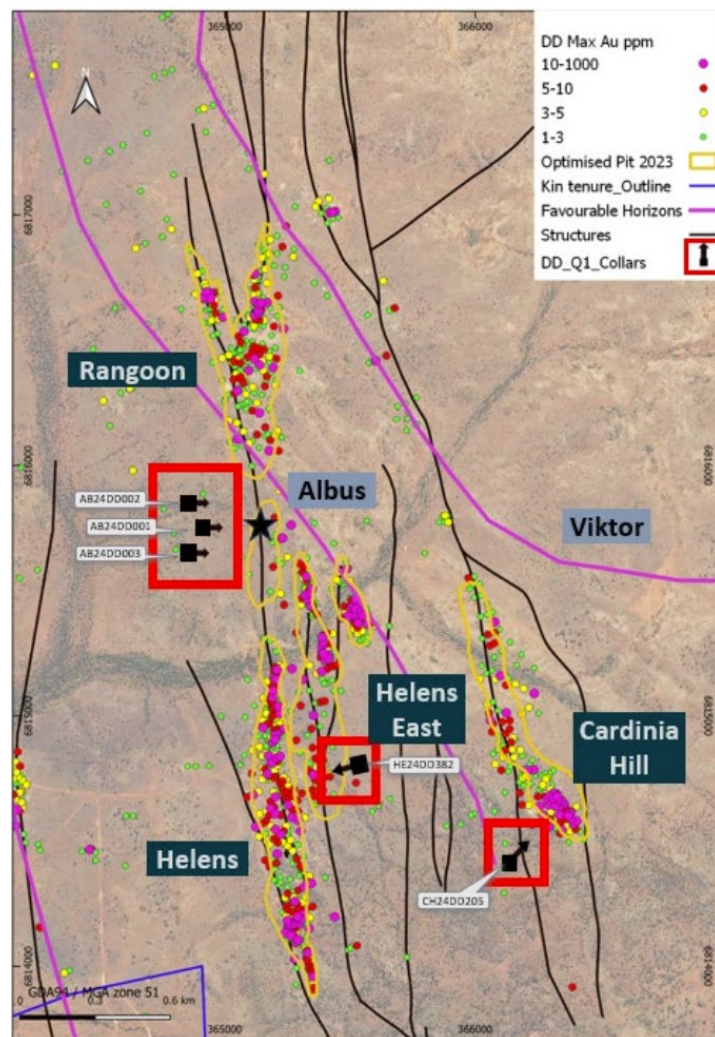

Figure 2: Completed drill holes for the Q1 2024 diamond program, showing Max gold ppm and the VMS Albus target.

Three of the four holes which have now been drilled into the Albus VMS Prospect have intersected significant base metal mineralisation, with AB24DD003 intersecting a fault that is likely to have offset down-dip extensions of the mineralisation.

Results returned for diamond hole AB24DD001, which was collared to test the VMS horizon, include a significant intercept of 1.8m @ 1.74% Zn, 0.39% Pb, 28.11g/t Ag, 0.07g/t Au from 300.2m.

Ongoing exploration of the base metal potential continues to generate targets for economic VMS mineralisation. Geological mapping indicates that the Albus mineralised horizon sub-crops as a gossan to the south near the Fiona prospect. A fence of follow-up drill holes has been planned to intersect this mineralised horizon down-dip.

Four further favourable horizons have also been mapped and sampled, comprising over 200km (parallel lodes) of cumulative strike to test.

At Cardinia Hill, hole CH24DD205 intersected an unexpected orogenic gold structure at 129.75m down-hole, returning a significant high-grade intercept of 0.8m @ 20.5g/t Au.

The new structure sits 200m west of the main Cardinia Hill mineralisation in a similar plane, based on orientated core logging (Figure 3 and 4). The main Cardinia Hill structure was intersected as expected adjacent to the Cardinia Hill porphyry at a down-hole depth of 355.45m and at a step-out of over 150m.

The mineralisation is continuous down-dip and demonstrates the potential to double the footprint of the Cardinia Hill mineralisation.

Recent structural studies carried out by Model Earth have indicated that the high-grade gold plunge control is shallow dipping rather than previously interpreted steeply dipping plunge. This new interpretation will allow Kin's geologists to better define the high-grade inventory of the Cardinia Hill gold mineralisation.

Figure 3: Cross-section through the Cardinia Hill deposit and CH24DD205 showing the gold intercepts down-hole in relation to geological interpretation and the current Resource at \$2600/oz. The felsic porphyry (FP) is closely associated with the gold mineralisation in Cardinia Hill and has been logged in the hanging wall of CH24DD205 mineralisation.

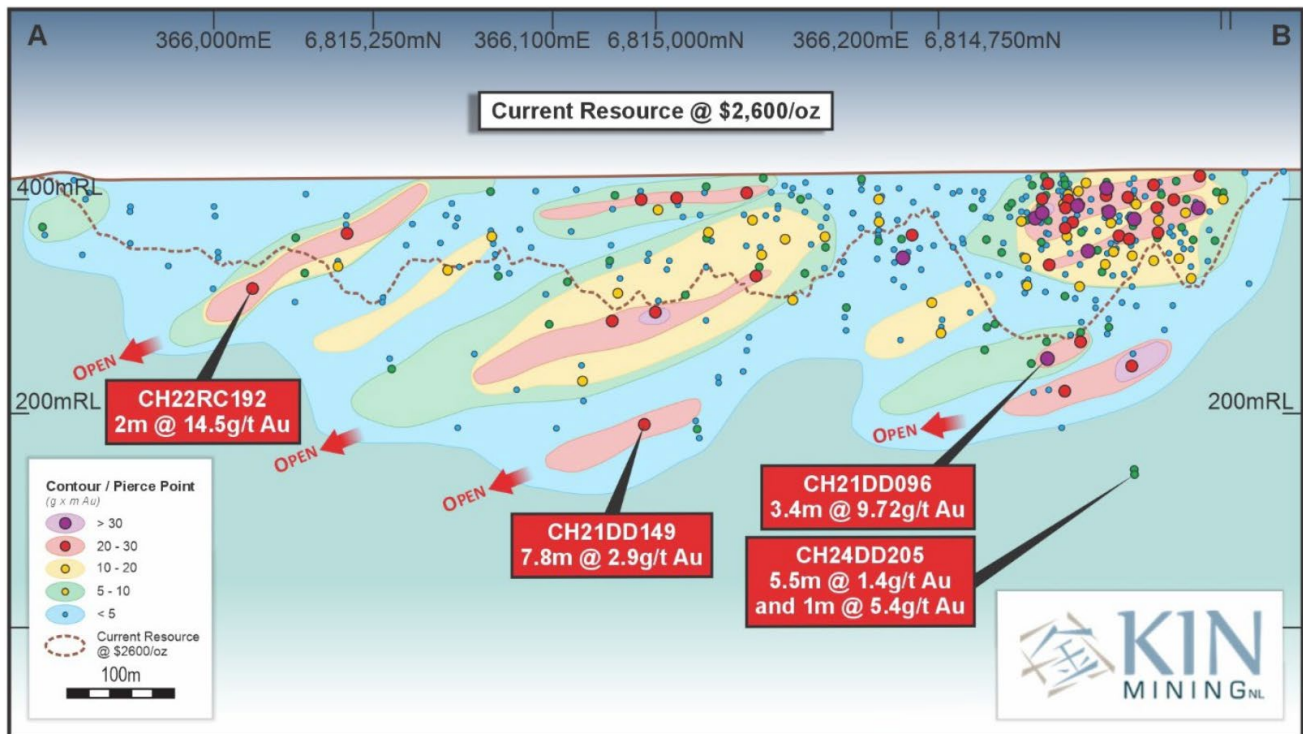

Figure 4: Long section looking East showing gram m grade shells at Cardinia Hill and recent result from CH24DD205. See ASX announcements from 22/5/22, 210721 and 210421 for other significant intercepts.

At Helens East, hole HE24DD382 intersected low-grade mineralisation, but did not encounter the Helens structure at the target depth. It is interpreted that the Helens structure, which is sub-vertical, alternates its orientation from slightly east-dipping to west, which would explain why it was not intersected by this hole.

Ongoing Exploration

A new program of Reverse Circulation (RC) drilling commenced in June to follow up the excellent gold results received from air-core drilling in 2023 (see ASX announcement 1st June 2023), between the Rangoon and Collymore prospects.

The program will also follow up the promising results at Cardinia Hill, as the deposit is open in all directions and contains a previously unknown high-grade hangingwall structure.

Kin still controls the majority of the known gold endowment in the Cardinia area, including 0.9Moz (see Table A1) in Resources. Drilling will aim to continue to further delineate and expand the Company's gold Resources at both Cardinia and Mertondale.

With the Company's strategic focus at Cardinia being to increase both the value and quantity of its gold inventory, the program is designed to increase the confidence and hence value of the known shallow Resources and to discover higher-grade resources beneath current mineralisation.

A significant budget of over \$3 million has been approved for the remainder of the calendar year to support these extensive programs.

A talented team of geologists with specialised consultant support has been assembled to better understand the mineralisation and help unlock the potential of the region.

CORPORATE

Cash Position

At the end of the June Quarter 2024, Kin had \$83 million in cash and liquid investments on hand. This reflects \$66.8M in cash and \$16.6M in shares in Genesis Minerals Limited.

Merger with PNX Resources

During the Quarter, Kin Mining and PNX Metals (ASX: PNX) announced an agreement to merge by way of a Scheme of Arrangement under Part 5.1 of the Corporations Act 2001 (Cth) (“Scheme”), under which KIN will acquire 100% of the PNX shares on issue.

PNX shareholders will receive 1 fully paid ordinary share in KIN for every 13 fully paid ordinary PNX shares held on the Scheme record date. On a like-for-like basis, this represents a 6.2% premium using the 30-day VWAP of KIN shares and PNX shares respectively.

Upon implementation of the Scheme, KIN and PNX shareholders will hold approximately 72% and 28% of the Merged Group respectively¹.

The Independent PNX Directors have unanimously recommended the Scheme and intend to vote all their PNX shares in favour of the Scheme in the absence of a superior proposal, and subject to no change in the Independent Expert’s conclusion in the Independent Expert Report that the Scheme is in the best interests of PNX shareholders.

The Independent KIN Directors have also unanimously recommended the Scheme and intend to vote all their KIN shares in favour of the resolution to be put to KIN shareholders for the purposes of ASX Listing Rule 10.1 in respect of the acquisition of the PNX shares from certain substantial shareholders of PNX pursuant to the Scheme, in the absence of a superior proposal.

Strategic Rationale

Strong balance sheet and exciting portfolio offers an exceptional platform for growth

- The Merged Group is expected to have a pro-forma market capitalisation of approximately A\$123.06², cash and liquid investments of A\$89.6m and no debt³.
- This strong balance sheet position provides optionality, financial flexibility, and a platform for growth on the combined portfolio of quality assets.

Merged Group offers compelling value to shareholders

- Implied pro-forma enterprise value of A\$33.4m offers compelling value, given the diversified and highly prospective portfolio the merged group will form, with Mineral Resources in excess of 1.4 Moz gold, 16.2Moz silver and 177 Kt zinc⁴.

Complementary combination of diversified assets in Tier 1 jurisdictions across Australia.

- Significant gold Mineral Resources in the Leonora region close to existing processing plants with approved mining proposals, and potential for high-grade gold discoveries, also project expansion through promising recent VHMS discoveries⁵.
- Exposure to district-scale gold and base metals potential via an extensive portfolio of 1,500km² of granted Mineral Leases and Exploration Licences, close to Darwin within the prospective Pine Creek region of the Northern Territory.

¹ Assumes 474,590,037 PNX shares are issued with regards the Silver Streaming Agreements and includes the 115,000,000 PNX shares issued on 12 April 2024.

² Pro-forma market capitalisation, on a fully diluted basis (assuming 474,590,037 PNX shares are issued with regards the Silver Streaming Agreements and including the 115,000,000 PNX shares issued on 12 April 2024), is based on the 10-day VWAP of KIN, \$0.0751, as at 11 April 2024, being the last trading day prior to the announcement of the Scheme.

³ Based on the cash position of PNX of A\$0.7m as at 31 March 2024, the market value of KIN’s investment in Genesis Minerals (ASX: GMD) of A\$22.9m as at 12 April 2024, being the last trading day prior to the announcement of the Scheme, and KIN’s cash position of A\$66.1m at 12 April 2024.

⁴ Refer Annexure A and Annexure B in the Company’s announcement dated 15 April 2024 for full details of respective Mineral Resource Estimates.

⁵ Refer to KIN Announcement released to ASX on 29 January 2024

- Near-term opportunities to advance the Pine Creek development projects with key environmental approvals granted for the Fountain Head gold project and technical studies well advanced for the Hayes Creek zinc-gold-silver project.
- The high-grade Thunderball uranium deposit, also located in Pine Creek, offers significant grade and resource upside potential in one of the world's largest and richest uranium provinces⁶.
- Asset diversification, and improved economies of scale significantly de-risks each shareholder group's portfolio and provides opportunities not available on a standalone basis.
- Funding in place to take full advantage of these highly prospective projects.

Highly experienced board and management team with proven track record

- Existing KIN directors, Giuseppe Graziano and Nicholas Anderson, will be joined on the Board of the Merged Group by current PNX director, Graham Ascough. Dual directors Rowan Johnston and Hansjoerg Plaggemars will continue on the merged Board. Rowan Johnston will remain as Executive Chairman while the search for an appropriate CEO takes place to lead the expanded group once the Scheme is approved.
- The Merged Group will have an experienced leadership team who have a demonstrated track record of value-creation and accretive transactions.
- The leadership team of the Merged Group can leverage their complementary skill-sets to drive growth and innovation to deliver value to shareholders.
- Strong funding position of the Merged Group provides the opportunity for:
 - Meaningful base metal exploration and growth through existing defined VHMS deposits and promising exploration targets in WA and the NT.
 - Gold exploration and growth of existing Mineral Resource estimates, in conjunction with highly prospective additional targets in WA and the NT.
 - Accelerated exploration and expansion of the exciting high-grade Thunderball uranium deposit and new regional targets in the Pine Creek region of the NT.
- The combined knowledge of the NT on ground team and WA on ground team will be merged and shared with drilling campaigns managed to suit seasonal restrictions, providing greater opportunities for employees and flexibility of work programs.
- Near-neighbour reviews both in the NT and WA to assess the potential for further M&A activities

⁶ Refer to PNX Announcement released to ASX on 15 March 2024.

Indicative Timetable

The definitive timetable as outlined in the Notice of General Meeting made available to KIN shareholders on 19 July 2024 is as follows.

Event	Date
KIN to dispatch Notice of General Meeting to its shareholders PNX to dispatch Scheme Booklet to its shareholders	19 July 2024
General Meeting of KIN shareholders	22 August 2024
Scheme Meeting of PNX shareholders	27 August 2024
Second Court hearing	30 August 2024
Effective Date	2 September 2024
Implementation Date	11 September 2024

Further details of the proposed transaction were provided in the Company's ASX Announcement dated 15 April 2024.

Change of Company Type, Company Name & Company Constitution

During the Quarter, the Company held a General Meeting of Shareholders to consider three resolutions: a change of company type, change of company name and a new company constitution. All three resolutions were passed on a poll.

As a result of these changes, the Company has changed from a public no liability company to a public company limited by shares. The Company name will change from "Kin Mining NL" to "Patronus Resources Limited". The Company has adopted a New Constitution appropriate for a public company limited by shares. The reasons for the three resolutions were provided in the Notice of Meeting dated 20 May 2024.

Related Party payments

As set out in item 6.1 of the Appendix 5B for the June quarter, payments to related parties consisted of remuneration paid to the Executive Chairman, Executive Director – Business Development and payment of non-executive director and consulting fees totalling \$0.204 million.

About Kin Mining NL

Kin Mining NL (ASX: KIN) is a West Australian based gold development and exploration company. Kin's key focus is its 100%-owned Cardinia Gold Project (CGP) located in the highly prospective North-Eastern Goldfields region of Western Australia. The CGP has a 0.932Moz gold Mineral Resource (post-sale – see Table 1) defined

in both oxide and deeper primary mineralisation with considerable potential to grow this resource with further drilling. Kin's exploration effort is the systematic program of exploration across the Cardinia Mining Centre that seeks to advance a number of targets in parallel while developing a pipeline of exploration targets for ongoing Mineral Resource expansion.

COMPETENT PERSON'S STATEMENT

The information contained in this report relating to exploration results relates to information compiled or reviewed by Leah Moore. Ms Moore is a member of the Australian Institute of Geoscientists and is a full-time employee of the company. Ms Moore has sufficient experience of relevance to the styles of mineralisation and the types of deposit under consideration, and to the activities undertaken to qualify as a Competent Person as defined in the 2012 edition of the JORC "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves".

Ms Moore consents to the inclusion in this report of the matters based on information in the form and context in which it appears.
