Omnia Metals Group Ltd (“Omnia” or the “Company”) is pleased to provide this report on activities during the quarter ending 30 June 2024.

## EXPLORATION UPDATE

### Lac des Montagnes Project – James Bay, Canada

Omnia has continued planning for the next stage of exploration at its Lac des Montagnes Lithium Project in the highly prospective James Bay region of Quebec.

The Company received multi-element assay results from samples from an extensive exploration program completed at the site during the second half of the 2023 calendar year.

The assays from more than 1,174 rock chip samples and 90 soil samples returned anomalous results and indicate fertile granite and pegmatite rock units with the potential to host lithium mineralisation.

The exploration work focused on 10 high priority targets within three permit areas across the 600km<sup>2</sup> project area.

The target areas were identified based on geology, geophysics and geochemical indicators (see Figure 1), with exploration focused on identifying mineralisation under moss and glacial till cover.

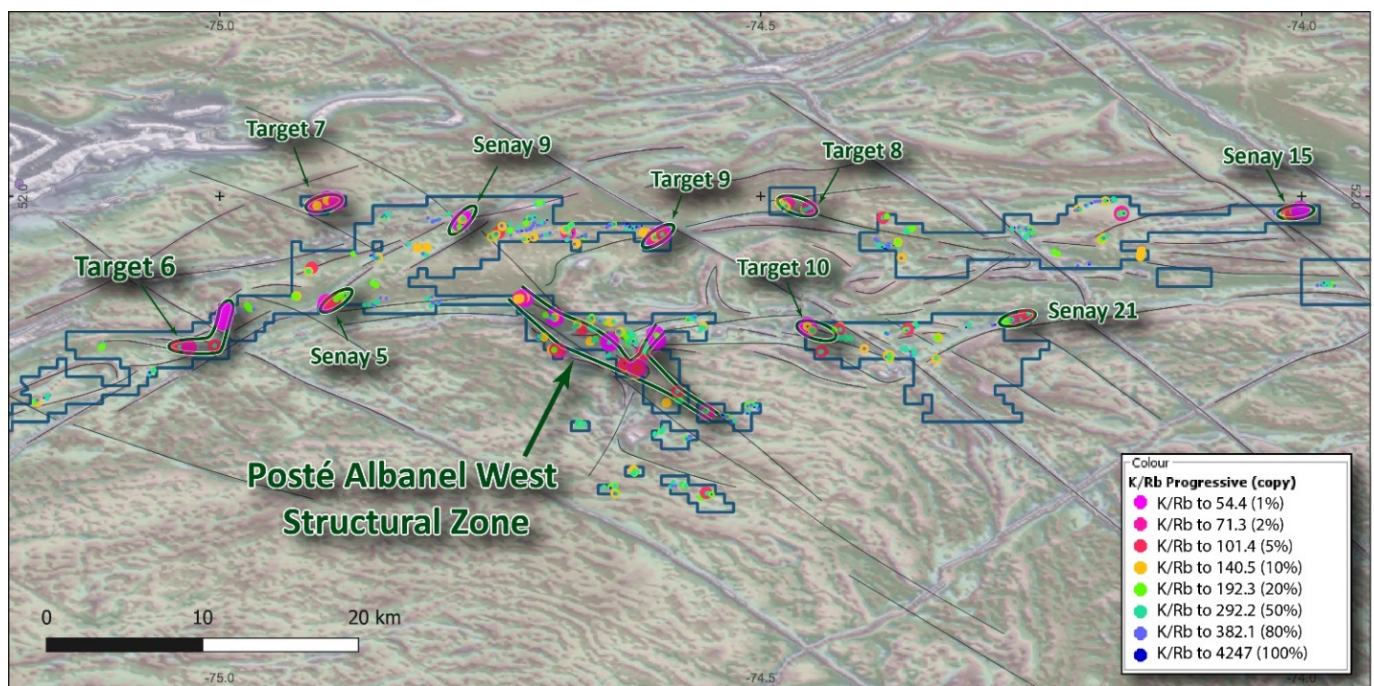

Figure 1: p-XRF K/Rb map of priority target areas within the Lac des Montagnes Project in Quebec.

Further sampling exploration activity has already been planned to test the undercover areas and determine the most prospective parts of the Lac des Montagnes greenstone belt.

### CSIRO research project

During the quarter, the Company participated in a CSIRO-led research project to test a new soil analytical method, with the results to complete effective exploration in areas lacking outcrop during future geochemical sampling programs.

The project involved analysing exploration results from locations outside of Australia that are prospective for lithium, using UltraFine+®, ionic leach (MMI) and 'conventional' analysis.

The Company's Lac des Montagnes took part in the research, with LabWest providing results for samples taken, using HF-based Microwave Assisted Total Digestion (MMA04), UltraFine+® and partial leaching techniques.

The results determined MMA04 recovered higher concentrations than UltraFine+® for the target element (lithium) from these samples.

### **Ord Basin Project – East Kimberley, Western Australia**

Omnia is pleased to report the Company has received approvals from the Purnululu Aboriginal Corporation to complete on-ground work at the Ord Basin Project, 140km south of Kununurra in Western Australia's Kimberley.

Spanning more than 1,300km<sup>2</sup>, the project is considered highly prospective for copper, with previous field work returning encouraging results.

The on-ground work program will be conducted over two key areas identified during past geophysical work, and will also include aerial VTEM surveying over the Junction Prospect, targeting copper-nickel style mineral systems.

The recent approvals were provided following an on-country meeting between Omnia and the Traditional Owners after the introduction and repeal of changes to the Native Title process.

### **Salt Creek Project – Goldfields, Western Australia**

Omnia has commenced the approvals process for further exploration across its Salt Creek Project, north-east of Kalgoorlie, following the identification of new gold and copper targets.

These targets were discovered following a review of gravity and magnetics datasets by Southern Geoscience Consultants, who recently completed modelling and interpretation work on data from the site.

The Company will work through relevant approvals with the intent of drill testing these targets during the second half of the 2024 calendar year.

## **HEALTH AND SAFETY**

Omnia is pleased to report there were no safety incidents during operations at the Company's sites.

The Company continues to maintain high safety and performance standards across all exploration activities to ensure the health and wellbeing of the Company's employees and associated individuals and businesses.

## **ENVIRONMENTAL, SOCIAL AND GOVERNANCE (ESG)**

Omnia is dedicated to ensuring exploration activities have minimal disruption to the local environment. The Company is committed to incorporating sustainable practices throughout its operations, both on site and in the office.

As an operator in Canada and Australia, Omnia continues to prioritise engagement with local First Nations communities and strengthen relationships with local stakeholders.

## CORPORATE ACTIVITIES

### Reinstatement of trading

Omnia announced on 30 October 2023 that it had been suspended from the ASX pending the release of an announcement regarding the proposed acquisition of Dixie Gold Inc. (TSXV: DG).

As at the date of release of the June quarterly activities report, the Company remains suspended from trading.

The Company is fully cooperating with the ASX and will provide a further update regarding expected timing for reinstatement as soon as possible.
