Attention: Ms Barbara Lim (Adviser, Listings Compliance (Perth))

By Email Only: tradinghaltspert@asx.com.au

Dear Ms Lim,

Melbourne, Australia – Tryptamine Therapeutics Limited ('**Tryp**' or the '**Company**') (**ASX: TYP**), a clinical-stage biotechnology company focused on the development of an innovative and scalable intravenous-infused psilocin formulation which can be used in conjunction with psychotherapy to address significant unmet medical needs, hereby requests a trading halt in relation to the Company's ordinary shares quoted on the Australian Securities Exchange (**ASX**) in accordance with ASX Listing Rule 17.1.

The trading halt is requested in relation to an update relating to the Company's TRP-8802 (oral psilocybin) study as noted in the ASX Release dated 10 July 2024 (**Purpose**).

In accordance with ASX Listing Rule 17.1, the Company provides the following information in relation to the request:

- The trading halt is necessary to assist Tryp in managing its continuous disclosure obligations as the Company expects to make an announcement to the market in relation to the stated Purpose above.
- Tryp requests that the trading halt remain in place until the earlier of commencement of normal trading on Monday, 12 August 2024, or when the announcement regarding the stated Purpose is released to the market.
- Tryp is not aware of any reason why the trading halt should not be granted or of any further information necessary to inform the market about the trading halt.

For and on behalf of the Board of Tryptamine Therapeutics Limited.

Yours faithfully,

David Franks

Company Secretary

About Tryptamine Therapeutics Limited

Tryptamine Therapeutics Limited is a clinical-stage biotechnology company focused on developing proprietary, novel formulations for the administration of psilocin in combination with psychotherapy to treat diseases with unmet medical needs. Tryp's lead program, TRP-8803, is a proprietary formulation of IV-infused psilocin (the active metabolite of psilocybin) that alleviates numerous shortcomings of oral psilocybin including: significantly reducing the time to onset of the psychedelic state, controlling the depth and duration of the psychedelic experience, and reducing the overall duration of the intervention to a commercially feasible timeframe.

The Company has completed a Phase 2a clinical trial for the treatment of binge eating disorder at the University of Florida, which demonstrated an average reduction in binge eating episodes of greater than 80%. The Company is also preparing to initiate a Phase 2a clinical trial in collaboration with Massachusetts General Hospital for the treatment of abdominal pain and visceral tenderness in patients suffering from irritable bowel syndrome. Each of the studies is utilizing TRP-8802 (synthetic, oral psilocybin) to demonstrate clinical benefit in these indications. Where a positive clinical response is demonstrated, subsequent studies are expected to utilize TRP-8803 (IV-infused psilocin), which has the potential to further improve efficacy, safety, and patient experience.
