Forward Looking Statements and Disclosures

Forward Looking Statement and Disclosures.

This presentation is not making any offer, inducement, solicitation or invitation of any kind by communication of this presentation to the recipient and under no circumstances is it to be construed as, a prospectus or an advertisement. Without limiting the generality of the foregoing, this presentation is intended to be communicated only to such persons as NSM is legally able to send it and who are legally able to receive it in their jurisdiction of residence. If you are not such a person, please return it to NSM immediately.

Information in this presentation is believed by NSM to be fair and accurate but neither NSM nor any other person accepts responsibility for such fairness or accuracy. This presentation has not been formally verified. No reliance may, nor should be placed upon the contents of this presentation by any person for any purposes whatsoever. Except where otherwise indicated herein, the information provided in this presentation is based on matters as they exist as of the date of preparation and not as of any future date and will not be updated or otherwise revised to reflect information that subsequently becomes available, or circumstances existing or changes occurring after the date hereof. Recipients should not construe the contents of this presentation (or any discussions relating to it) as legal, tax, regulatory, financial, investment, accounting or other advice or as a recommendation by NSM or any other person in respect of any matter whatsoever.

While NSM believes that any projected returns, or other forward-looking statements, included in this presentation relating to pipeline or illustrative investments are based on assumptions and valuation methodologies that are reasonable under the circumstances, the actual realised returns on any such investments will depend on, among other factors, future operating results, the value of the assets and market conditions at the time of disposition, any related transaction costs and the timing and manner of sale, all of which may differ from the assumptions on which the valuations used in this presentation are based. Accordingly, the actual realised return of any such investments mentioned herein may differ materially from the projected returns indicated herein. Historic experience of any persons associated with NSM, and past, targeted or projected performance, is not necessarily indicative of future results and there can be no assurance that any targeted or projected returns will be achieved. The information contained herein, unless otherwise indicated, is subject to change and NSM assumes no obligation to update the information herein.

No representation or warranty, express or implied, is or will be given by NSM or any of its directors, members, shareholders, partners, officers, employees, consultants, advisers or agents (together, its "Related Persons"), and, without prejudice to any liability for, or remedy in respect of, fraudulent misrepresentation, no responsibility or liability or duty of care is, or will be, accepted by NSM or any of its Related Persons as to the fairness, accuracy, completeness, currency, reliability or reasonableness of the information or opinions contained in this presentation, or of any other written or oral information made available to any recipient or its advisers in connection with this presentation. Accordingly, none of NSM or its Related Persons shall be liable (save in the case of fraud) for any loss (whether direct, indirect or consequential) or damage suffered by any person as a result of relying on any statement in, or omission from, this presentation.

This presentation and the rights and obligations of the recipients arising out of or in connection with it are governed by the laws of Australia, and the courts of Australia shall have exclusive jurisdiction to hear and decide any proceedings relating to any claim or dispute arising from or in connection with this presentation.

Competent Persons Statement

The information that relates to North Stawell Minerals' Exploration Targets, Exploration Results and Mineral Resources is based on information compiled by Mr. Bill Reid, a Competent Person who is a Member of The Australian Institute of Geoscientists (AIG) and Head of Exploration of North Stawell Minerals. Mr. Reid has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves' (2012 JORC Code). Mr. Reid consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

New Information and Previous Results

For previously reported results, North Stawell Mineral is not aware of any new data or information that materially affects the information as originally disclosed. All results in the presentation are previously reported.

Corporate Overview

A highly experienced leadership team with strong exploration and mining experience – NSM is solely focussed on gold in western Victoria

BOARD AND MANAGEMENT

Jerry Ellis Non-Executive Chairman

30 years at BHP (2 years as Chairman), ANZ Bank director for 10 years. Prior board positions at Newcrest Mining, Aurora Gold, and the American Mining Congress.

Campbell Olsen Executive Director

20 years in private equity and operational management in resources. CEO and Director of Arete Capital Partners and CEO Stawell Gold Mine. Executive Director and Interim CEO of North Stawell Minerals.

Alistair Waddell Non-Executive Director

25 years in diverse mineral exploration, development and capital markets. Founder and ex-CEO of GoldQuest Mining Corp.

Single-commodity and single-jurisdiction project with experienced board and management with substantial Victorian exploration and mining experience.

CAPITAL STRUCTURE

NORTH STAWELL PROJECT

Exploring for large, shallow gold deposits similar to Stawell preserved under a thin blanket of Murray Basin sediments.

1. NSM Tenement Package

Source: Geoscience Australia

TMI-TILT

From early 2000's

Source: Geoscience Australia

NSM Tenements

NSM has consolidated 504km² (60km strike) in the "Stawell Corridor" bordering the Stawell Gold Mine heading North-West along strike¹.

Stawell Gold Mine "Magdala Dome"

¹Ref 1 (see references at the end of the presentation for details)

North Stawell Minerals – tenement package

Cover = Mud, rocks, dirt, farms, forests

You can see that most of the tenements are covered over and do not see daylight. That has been a problem as long as gold has been mined. Simply couldn't see under the ground "cover".

2. Stawell Gold Mine

(owned and operated by Stawell Gold Mines (pvt).)

ASX:NSM

What's the big deal with the Stawell Gold Mine?

Stawell Gold Mine has been around since the 1980's.

Originally a WMC project has had 10 owners over the years, now privately owned.

Yielded nearly 5 million Oz Au, with an additional 1 Million Oz Au in the resource table¹.

Most (nearly all) has come from the Magdala Basalt dome ("Magdala"). Significant data on Magdala has been shared with NSM.

The owners of Stawell Gold Mines hold a significant minority ownership of NSM.

Stawell Gold Mines (Magdala + Wonga)

The Stawell Gold Mine - looking south. Mineralisation (yellow) wraps around the margins of the large basalt slab (the Magdala Dome - grey)

**Magdala dome plus
newly developing
Browns dome.**

Browns Target

Browns has been known about for some time with historic surface drilling over the years discovering gold. The historic information has been collated and loaded into modern mining analysis platforms together with other information from recent years. NSM analytics (Gravity and Magnetics) indicate the Browns dome may extend North into the Stawell Corridor up to 15 km.

Sitting invisibly under cover (FOR THE LAST 400 MILLION YEARS).

The challenge is now to determine if they really are the same as Magdala using an extensive exploration program and an array of sophisticated analytics.

Firstly, we're looking for evidence of gold ("smoke" smouldering away at surface and at shallow depths).

If we can find the smoke then we're getting more convinced there's gold below, just like Magdala.

Drilling results through cover

(5)

(6)

We see gold grades up and down the corridor above and around identified basalt domes.

These encouraging results indicate multiple other basalts have potential to host gold, based on the “Stawell-type” gold model. ⁽⁷⁾

All results are previously reported: (1) historic results – see ASX:NSM 31 Jan 2022 (Table 1). (2) see ASX:NSM 27 Apr 2022. (3) see ASX:NSM 13 Oct 2022. (4) see ASX:NSM 23 June 2023, 11 May 2021, 13 Apr 2021, 17 Mar 2021, 22 Feb 2021. (5) see ASX:NSM 13 Sept 2022. (6) see ASX:NSM 16 Feb 2023. (7) See page 16, this document, see ASX:NSM

The gold has to come from somewhere, right?

Faults and shears channel gold-bearing fluids around the edges of the basalt domes.

Magdala Comparison

We've ranked the new domes in terms of size compared to Magdala. Remember, since the 1980's Magdala has provided 40 years of mining and nearly 3 million Oz¹ and is still producing.

We simply want another Magdala.

¹Ref: Winterbottom and Holland 2017 ²SGM = Stawell Gold Mines

Wildwood includes a shallow Mineral Resource ⁽¹⁾ :
1.15Mt at 2.4 g/t Au for 87koz Au.
Open at depth on basalt flanks

- Reported in accordance with 2012 JORC.
- 1g/t Au cut-off.

SGM's Stawell Mine (on the **Magdala** basalt) has provided 40 years of mining and nearly 5 million Oz Au production⁽²⁾ since discovery.

Lubeck Tip was discovered with geophysics-only exploration. Gold mineralisation is open and on the margins of a basalt⁶

Forsaken includes two 400m mineralised trends ⁴

Two priority targets north of Magdala under cover. Data acquisition and processing has advanced significantly over the past 30 years.

Wildwood - 25km north

Darlington-Caledonia - 6km north

Background: TMI magnetics - tilt filtered

AGG Gravity Data ⁽¹⁾

Wildwood & Darlington in relation to Magdala and Browns.

Orthographic image of Stawell trend – looking down to the north.
n.b. scale varies

Source: Stawell Gold Mines and NSM

Here's some early results from drilling at Wildwood. To us it's starting to look a lot like Magdala back in 1985.

Stawell Mine vs. Wildwood Resource and targets – size.

The geology is the same. Structure and dimensions are similar. Stawell has 50x historic gold. Wildwood is open and shallow-tested.

Wildwood and Stawell at same scale

Based on our Magdala "model" we think this is what's happening at Wildwood.

High-tonnes flanking mineralisation

A low tonnes "Waterloo" embayment

Plan

Section

Wildwood (2024)

Stawell (1994)⁽¹⁾

Basalt

Drillhole gold intercept

One of the characteristics of the Stawell Gold Mine is depth persistent mineralisation.

At Wildwood, despite a shallow focus for drilling, isolated deeper gold results indicate potential for a depth-persistent mineralisation system.

In 1994, the depth extent of the Stawell Mine East Limb was yet to be realised. However, exploration holes had identified anomalous grades at depth.

30 years later - the Stawell result has proven to be part of semi-continuous mineralisation to depth to at least 1,600m.

The deepest Wildwood drilling result (WWD075) occurs at a vertical depth of ~500m has not been followed up with additional drilling.

(1) historic results - see ASX:NSM 31 Jan 2022 (Table 1).

(2) Source and permission - Stawell Gold Mines (private)

Based on our Magdala "prototype" we think this is what's happening at Darlington.

Again, at Darlington and based on our Magdala model we think our exploration has hit a splay above the dome¹. This happened at Magdala and resulted in the old "Davis" open pit (now finished and backfilled).

¹Refs 56, 57

Vertical shaft and mine at Darlington

It helps that there is an old vertical shaft and mine at Darlington¹. We think it sits atop a splay which we would now like to chase down deeper and find the Basalt dome underneath.

This is the top of our estimated Darlington dome.

This is the splay formerly mined by the old timers.

mineralisation

basalt

Basalt untested at depth

Nb. Animation is orthographic – scale varies

Darlington is now interpreted as part of a much bigger system – the 8km Browns – Caledonia trend.

Best results on the NSM tenements include:

- 4.00m @ 10.77 g/t Au from 60.00m (NSAC0527) ⁽²⁾
- 6.00m @ 3.45 g/t Au from 42.00m (NSAC0532) ⁽²⁾
- 1.00m @ 12.70 g/t Au from 33.00m (SEXC294) ⁽¹⁾
- 1.00m @ 12.50 g/t Au from 24.00m (SEXC296) ⁽¹⁾
- 1.00m @ 12.15 g/t Au from 36.00m (NSR0077) ⁽³⁾
- 3.00m @ 3.04 g/t Au from 45.00m (NSAC0530) ⁽²⁾
- 3.00m @ 2.83 g/t Au from 42.00m (SEXR1314) ⁽¹⁾
- 6.00m @ 1.40 g/t Au from 63.00m (NSAC0451) ⁽²⁾

ABOUT NORTH STAWELL MINERALS LIMITED:

North Stawell Minerals Limited (ASX: NSM) is an Australian-based gold exploration company focused on discovering large scale gold deposits in the highly prospective Stawell Mineralised Corridor in Victoria.

The Company is exploring prospective tenements located along strike of, and to the immediate north of the Stawell Gold Field which has produced more than five million ounces of gold. NSM's granted tenure has a total land area of approximately 500 km². NSM believes there is potential for the discovery of large gold mineralised systems under cover, using Stawell Gold Mine's Magdala orebody as an exploration model to test 51km of northerly strike extension of the under-explored Stawell Mineralised Corridor.

This Announcement is authorised for release by the Board of North Stawell Minerals Ltd.
