EKJV Exploration

In FY25 Q2, at East Kundana Joint Venture, work completed for the East Kundana Joint Venture includes 4,158 metres of RC drilling into the Hornet deposit, in preparation for Open pit mining in FY25 (table 1). The exploration activity for the December quarter is summarised below.

WORK COMPLETED

Infill Reverse Circulation (RC) drilling was completed at Hornet, in preparation for the open pit mining sequence, due to commence in quarter four FY25. A total of 4,158 metres of RC drilling was completed into the Inferred mineral resource, within the Mary fault mineralisation (figure 1). For the Mary Fault position, a dense drill spacing of 5 metres by 5 metres was required to determine continuity of mineralisation. Drilling results are positive with a high-grade mineralised zone defined (figure 2 and table 1). These drilling results will be included in a Mineral Resource update and form part of an updated mining sequence.

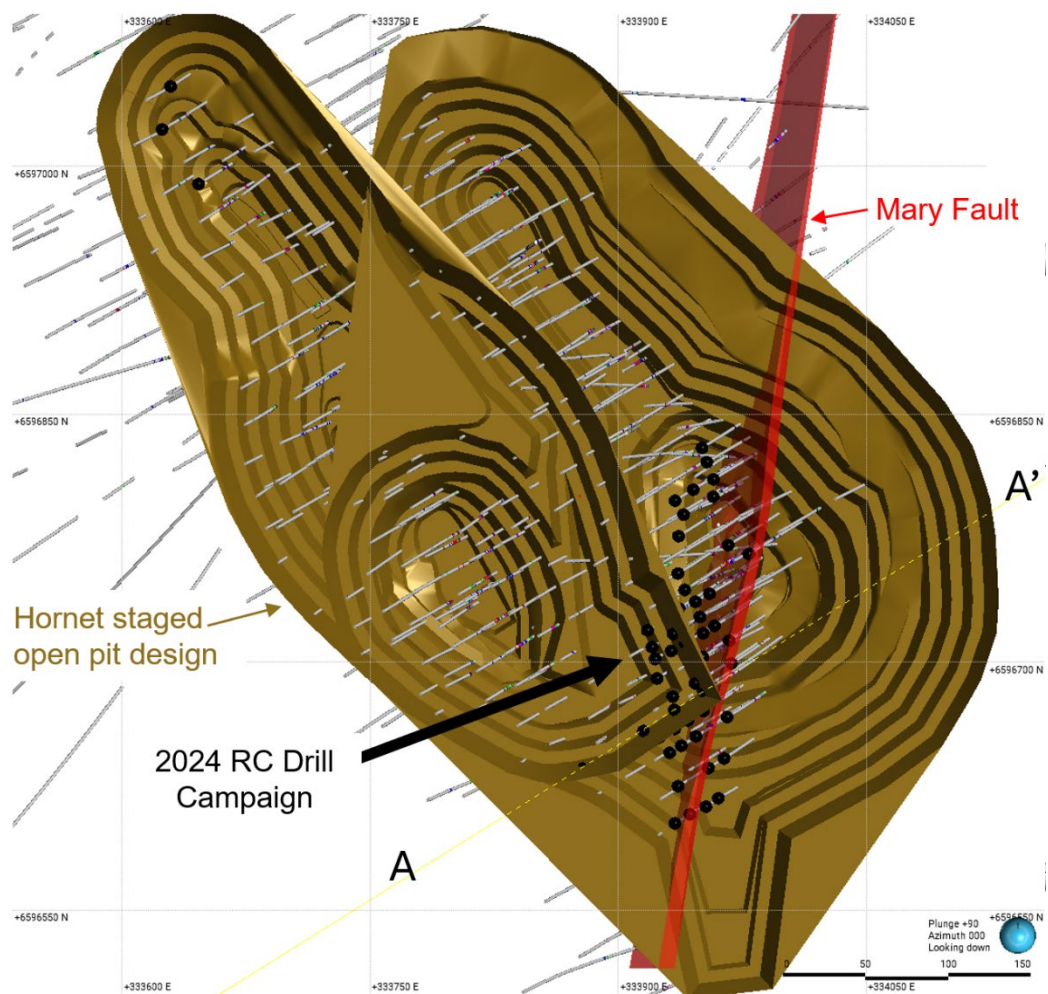

Figure 1 - A plan view of the Hornet RC drilling completed within the quarter, showing historic drilling, the Hornet open pit design and the Mary Fault mineralisation.

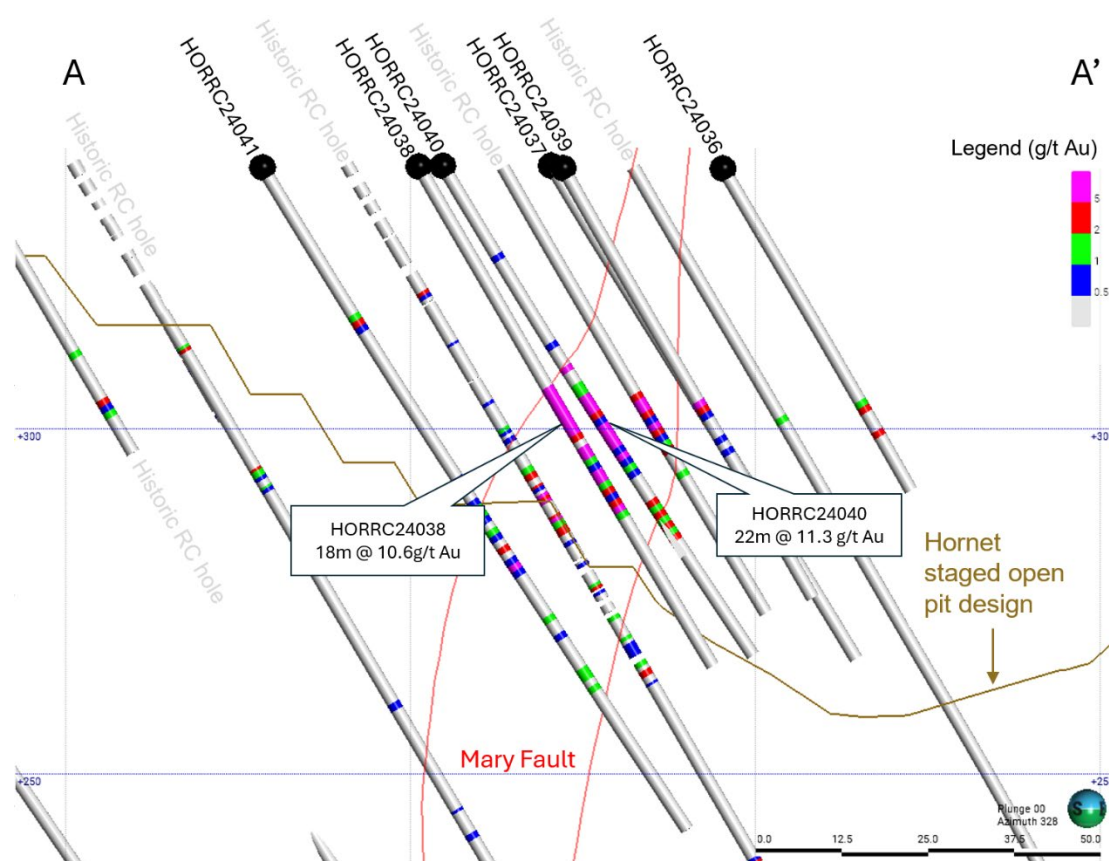

Figure 2 – A cross section of the Hornet infill RC drilling into the Mary Fault mineralisation

For details of the assay results, please refer to the EKJV Exploration Report December 2024 Quarter release to the ASX on 23 January 2025.

Other Exploration Projects

Tribune Resources (Ghana) Limited (Tribune's Interest 100%)

There were no drilling activities, no minerals mined and no mineral processing activities during the fourth quarter. Due to the delay in ratifying the company's mining lease by parliament for mine development, the company plans to commence limited drilling and other exploration work on the northern extension of its mining lease between Adiembra and Japa township. A program of air core holes targeting the laterite horizon up to the transition zones, and RC drillholes total have been planned to test the extent of the porphyritic depth around the Japa stretch of the concession during 2025.

Diwalwal Gold Project

(Philippines) (Tribune's Interest 40% and a further 20% earned Economic Interest)

No significant exploration activities were conducted during the quarter on the Upper Ulip and 729-ha tenement in Diwalwal. All geological data, including drill cores, maps, and assay laboratory results available at the Mabatas Exploration Camp, were collected and consolidated for inventory and safekeeping.

No drilling was conducted during the quarter.

Assay results from previous rock chip samples collected at Upper Ulip are tabled below.

Seven Mile Hill Joint Venture (Tribune's Interest 50%)

During the quarter, Tribune completed two drill holes for 651 metres, comprising:

- Rotary mud drilling in the clay zone for 132 metres
- Diamond drilling for 519 metres

The drilling was conducted on P26/4173 following erratic gold intercepts from shallower RC drilling. The program is to enable a better structural understanding and identify deeper high-grade gold mineralisation.

The core is currently being cut in preparation for gold assays.
