

**ASX ANNOUNCEMENT / MEDIA RELEASE**

**ASX: PRX**

17 February 2025

***Exploration Update – Planning for the 2025 Field Season***

**HIGHLIGHTS**

Exploration planned for the 2025 field season includes:

- Drilling at Hyperion to test down-dip extension of mineralisation reported in hole HYRC24004 (10m @ 15.9g/t Au from 177m)
- Surface sampling and costeaning of various targets in close proximity to Hyperion
- Continuation of metallurgical testwork on samples from the 2024 drilling at Hyperion
- Follow-up drilling at Tregony North
- Assess development options for the Old Pirate Deposit, consideration given to potential joint venture and/or profit-sharing opportunities to fast-track development
- Advance the Hyperion Mineral Lease application and approvals with the commencement of environmental studies
- Further assessment of the Tanami West project to assess areas of interest and identify priority targets for future exploration

Prodigy Gold NL (ASX: PRX) ('Prodigy Gold' or the 'Company') is pleased to present an outline of the exploration programs planned for the 2025 field season. Prodigy Gold is utilising the current northern Australian wet season to prepare for these work programs with a view to commencing field work in mid- to late April 2025 once the project areas are likely accessible. Prodigy Gold's key exploration focus remains the Tanami North project in the Northern Territory (Figure 1).

Following the expiration of the Sales Agreement with Stockton Mining Limited<sup>1</sup> the Tanami West project was returned to the Company. Prodigy Gold is currently reviewing the tenement package with a view to prioritising exploration targets that warrant additional work by either the Company or a suitable joint venture partner. Titles where priority targets cannot be identified are likely to be either relinquished or reduced in size to reduce tenement holding costs to the Company.

The Company has an exciting work program planned for the Tanami North and Tanami West projects area over the 2025 field season, which is expected to provide results that could potentially add to the current Mineral Resource estimates at Hyperion and Tregony, as well as advancing several other prospects. Proposed upcoming work programs include:

---

<sup>1</sup> ASX: 26 November 2024

- Additional drilling within the Hyperion and Tregony Deposits, aiming to enhance confidence in, and potentially expand the current Mineral Resources
- Receipt of further metallurgical testwork results for the Hyperion Deposit, which are anticipated to be received in April-May 2025 focused on the Hyperion and Tethys lodes
- Surface sampling, including costeaning in and around the Hyperion Deposit to advance other potential targets in proximity to the new Hyperion Mineral Lease application
- Reverse Circulation (“RC”) or Air Core (“AC”) drilling at Tregony North to add to encouraging results from 2024
- Initiation of on-ground exploration, involving geological mapping at Mark’s Rise subject to approval from Traditional Owners via the Central Land Council (“CLC”)
- Field review of the Tanami West project area to plan for future exploration across this prospective region
- Investigating the potential for a possible joint venture and/or profit-sharing scenario for mining at Old Pirate
- Advancement of the Hyperion Mineral Lease application and approvals

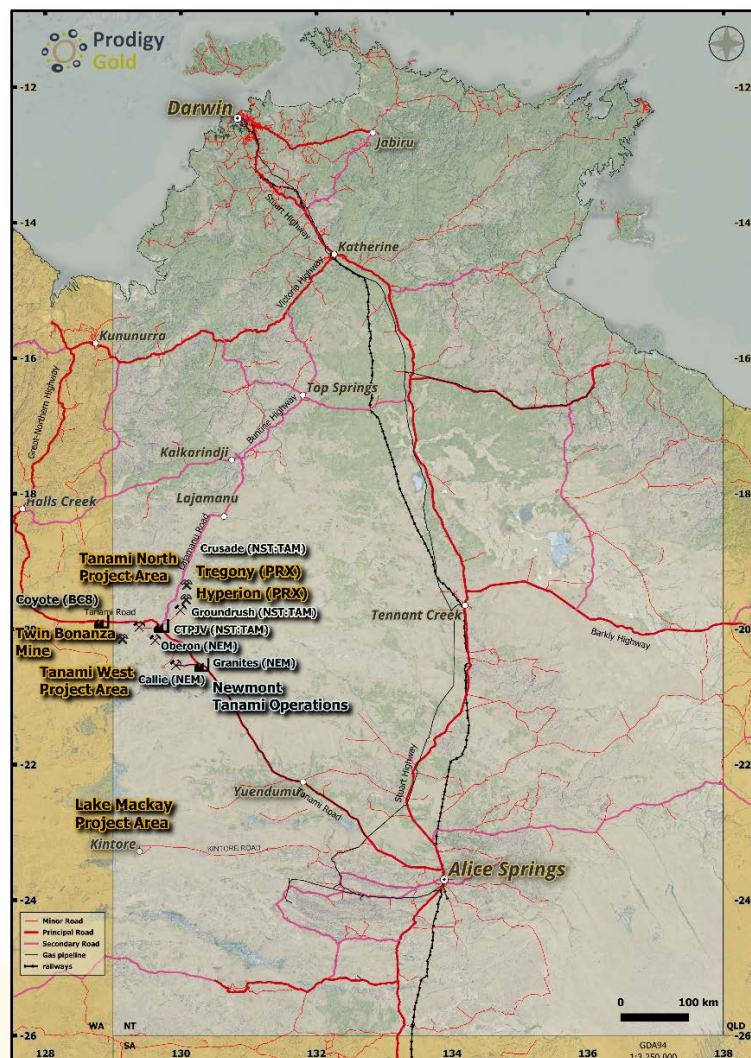

Figure 1 Project location in the Tanami Region

## Management Commentary

Prodigy Gold Managing Director, Mark Edwards commented: *"The Prodigy Gold team is actively finalising plans for the 2025 field season in the Tanami Region of the Northern Territory. The focus will be on follow-up drilling at Hyperion and Tregony, building on the successes of the 2024 campaigns. A*

key target will be to assess the potential of the deeper Tethys lode around hole HYRC24004, which returned an intercept of 10m @ 15.9g/t Au from 177 metres. This hole, with good grade and width, has highlighted the potential for identifying deeper mineralisation that potentially could be amenable to future underground mining. Prodigy Gold is planning two deep diamond drill holes to test the Tethys lode's down-dip and down plunge potential. These holes will form part of Prodigy Gold's application for co-funding under the Geophysics and Drilling Collaborations program Round 18 grants, which open for applications on 25 February this year.

The Prodigy Gold team will also remain busy interpreting metallurgical results for the Hyperion and Tethys lodes. These results are expected in Q2 2025 and will complement the previous findings from the Seuss lode that were released in 2024. This work is designed to strengthen our confidence in pursuing a mining operation at the Hyperion Deposit and will support the recent Mineral Lease application approval process adding critical mining information required to generate a high-quality mining plan.

Elsewhere, the upcoming field season will include a site inspection at some Tanami West prospects to assist with the development of clear exploration strategies for the highly prospective areas. There are currently either no, or limited approvals for works at this project. The team intends to assess these targets in detail and plan future works allowing the submission for relevant approvals to the Department of Mines and Energy ("DME") and the CLC.

Other key development projects for 2025 will include assessing the potential to recommence mining at the Old Pirate project and the continuation of the Hyperion Mineral Lease application process. The evaluation of the potential for mining of the Old Pirate Deposit either via a joint venture and/or a profit-sharing opportunity is underway.

The Prodigy Gold team looks forward to keeping our shareholders updated on all exploration and business development activities throughout the year."

## **2025 Exploration Program – Tanami North Project**

### **Hyperion Deposit**

The Hyperion Deposit is located in the highly prospective, but underexplored area situated between the Groundrush and Crusade Gold Deposits, both of which are part of the neighbouring Central Tanami project<sup>2</sup>. Hyperion is also located around 25kms to the south of Prodigy Gold's wholly owned Tregony Deposit (Figure 2).

In July 2024, Prodigy Gold released an updated total Mineral Resource of 8.6Mt @ 1.5g/t for 407Koz of gold<sup>3</sup> for the Hyperion Deposit based on the drilling completed in 2023. Since then, the Company has concluded drilling of 17 RC holes totalling 1,770m on EL9250 (Figure 3). The primary focus of this drilling was to continue to enhance confidence and potentially expand the metal inventory of the Hyperion Mineral Resource. The drilling was also used to supply samples for on-going metallurgical testwork on the Hyperion and Tethys lodes of the mineralised system, following on from the work completed in 2024 on the Seuss lodes. The Company is currently working on a Mineral Resource update to include the 2024 drilling results.

The 2024 RC drilling returned a number of significant intercepts based on a 0.5g/t gold lower cut-off, including highlights<sup>4</sup>:

- 25 metres @ 2.2g/t Au from 66m in hole HYRC24001 (Estimated True Width – "ETW" 24.1m)
- 15 metres @ 3.1g/t Au from 152m in hole HYRC24003 (ETW 13.2m)

---

<sup>2</sup> 50/50 joint venture between Northern Star Resources Ltd (ASX: NST) and Tanami Gold NL (ASX: TAM)

<sup>3</sup> ASX: 29 July 2024

<sup>4</sup> ASX: 22 October 2024

- 10 metres @ 15.9g/t Au from 177m in hole HYRC24004 (ETW 9.4m)
- 30 metres @ 2.9g/t Au from 31m in hole HYRC24006 (ETW 19.0m)
- 13 metres @ 4.1g/t Au from 26m in hole HYRC24013 (ETW 10.9m)
- 33 metres @ 2.6g/t Au from 49m in hole HYRC24017A (ETW of 29.9m)

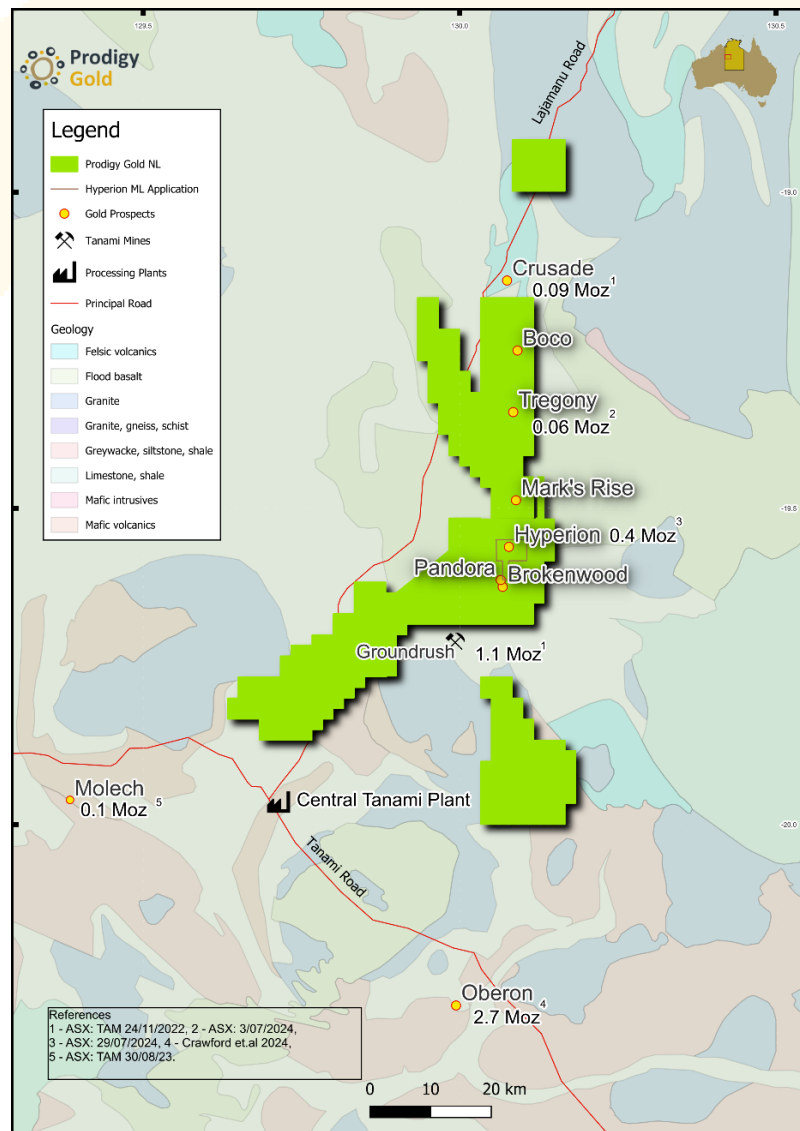

Figure 2 Location of the Tanami North project area

Prodigy Gold is planning to drill two deep diamond holes targeting the down-dip extension of the mineralisation identified in hole HYRC24004. This hole intersected a zone of higher-grade mineralisation at depth in the Tethys lode below the Seuss lode (Figure 4). This drilling will form part of Prodigy Gold's application for co-funding through the Round 18 grants as part of the Geophysics and Drilling Collaborations program within the Resourcing the Territory Initiative. The program is designed to assist Prodigy Gold in understanding the structural controls on this mineralisation and the potential extent, both along strike and down dip.

On review of the small number of historic holes drilled into the Tethys lodes, mineralisation at depth appears to be related to a brecciated fault system, which can be a challenge to fully recognise using RC chips. Historic diamond hole TYRD10003, drilled by Prodigy Gold in 2016, returned a result of 13m @ 5.6g/t Au from 184m<sup>5</sup>. Diamond drilling will provide higher quality sample material within this zone

<sup>5</sup> ASX: 7 December 2016

and will assist with generating a more detailed understanding of the mineralisation itself, enhancing the design of future drilling programs.

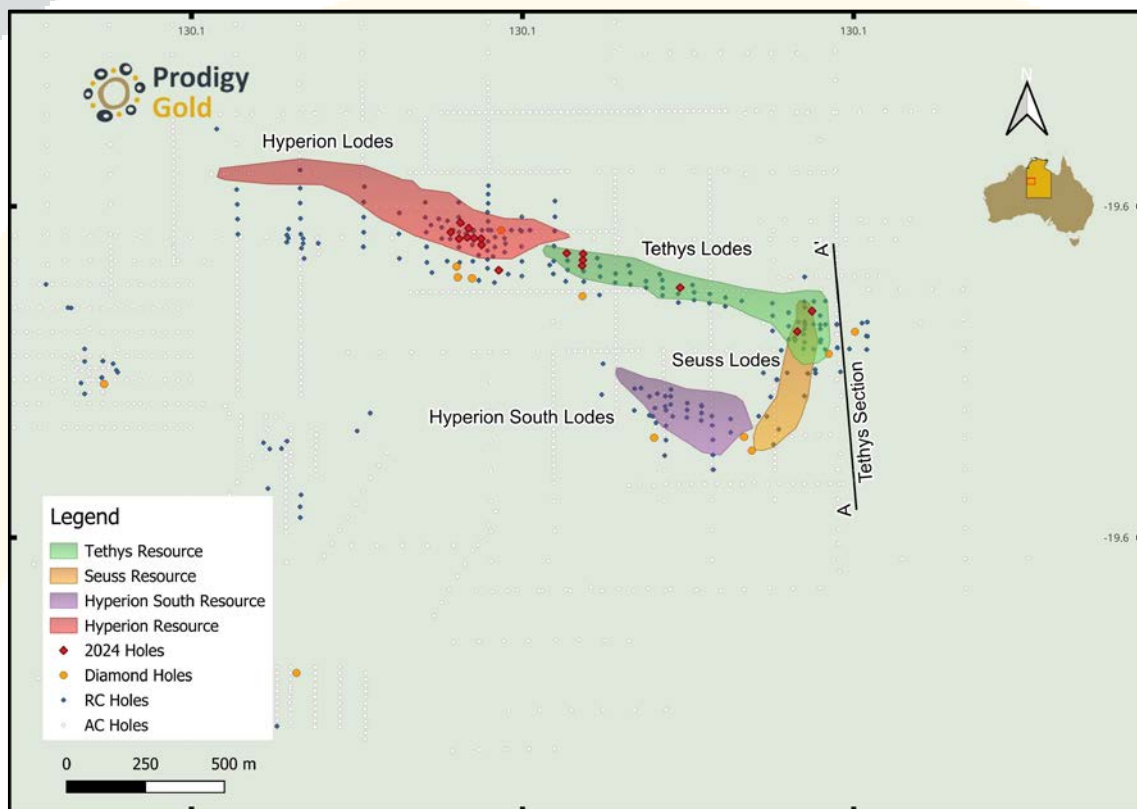

Figure 3. Map of Hyperion Mineral Resource lodes highlighting the 2024 drilling

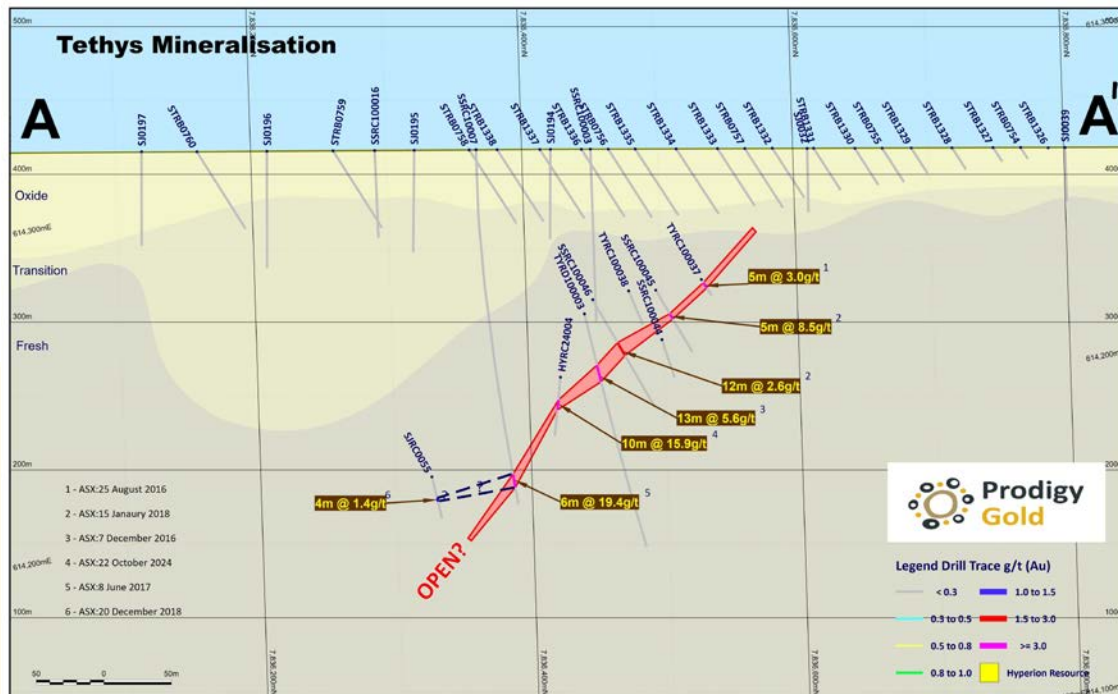

Figure 4 Cross Section view of Tethys lode showing location of hole HYRC24004

Metallurgical testwork on the Hyperion and Tethys lodes will continue over 2025. Composite samples from drill holes HYRC24005 and HYRC24009 were sent to Independent Metallurgical Operations Pty Ltd (“IMO”) in Perth for testwork. The metallurgical testwork aims to evaluate the response of oxide, transition, and fresh (sulphide) samples to gravity gold recovery, carbon-in-leach (“CIL”), and heap

leach processing methods. Prodigy Gold expects to receive the results in Q2 2025, which together with highly encouraging metallurgical results received in 2024 for samples from the Suess lode<sup>6</sup>, will help assess potential development opportunities for the Hyperion Mineral Resource.

On 4 December 2024, Prodigy Gold announced the lodgement of a Mineral Lease application<sup>7</sup> to the DME in the Northern Territory, fully encompassing the Hyperion Gold Deposit and its immediate strike and depth extensions as well as space for future mining and support infrastructure including waste dumps, haul roads, workshops, camp and Run of Mine (“ROM”) stockpile pads (Figure 5). Over the coming year the process will begin to advance the application through the application of a mining permit, which may require an Environmental Impact Assessment, as well as the commencement of negotiations for mining and support agreements with Traditional Owners. It is estimated that the process could take at least 2 years to progress to the grant of the Mineral Lease.

Figure 5 Location of new Mineral Lease Application for Hyperion project

Further work will be necessary to finalise any future mine development for the project, including:

- Additional resource development drilling to enhance confidence in the existing Mineral Resources, particularly upgrading more Inferred material to higher confidence categories
- Completion of metallurgical testwork, which is currently underway
- Geotechnical assessment of various rock types to support future pit design studies
- Completion of a detailed mining study and scheduling, evaluating multiple processing options to determine the optimal mining strategy
- Investigation of modern ore-sorting techniques to assess the feasibility of on-site beneficiation, potentially reducing the volume of material transported for processing
- Initiation of environmental studies required for the final approval of a future Mine Management Plan (“MMP”)

<sup>6</sup> ASX: 12 June 2024

<sup>7</sup> ASX: 4 December 2024

## Tregony Deposit

The Tregony Deposit is located on EL31331, 125km south-west of Lajamanu in the Tanami Region of the Northern Territory (Figure 2) and is hosted within the regional Supplejack Shear Zone (SSZ) over a strike length of around 3km. Mineralisation is represented in a stacked vein style model hosted within the sediments of the Killi Killi Formation. There are over 50 mineralised lodes defined in the current resource, ranging in thickness from 2m to up to 15m wide.

During 2024 Prodigy Gold completed 6 RC drill holes for 486m at Tregony North (Figure 6). Highlight intercepts returned from the drilling include<sup>8</sup>:

- 21m @ 4.4g/t Au from 24m (TGRC24006) including:
  - 1m @ 24.7g/t Au from 42m
- 20m @ 1.3g/t Au from 88m (TGRC24004);
- 13m @ 2.7g/t Au from 45m (TGRC24002) including:
  - 2m @ 9.7g/t Au from 48m

Drilling is planned to target both, the Tregony main zone, which was drilled in 2023, as well as follow up on the 2024 drilling at the Tregony North area. The drilling will add confidence in the current Mineral Resource, which was updated and released in July 2024<sup>9</sup> yielding a total Mineral Resource of 1.6Mt @ 1.3g/t Au for 64Koz of gold. Prodigy Gold is currently looking to update this Mineral Resource to include the results of the 2024 drilling. A campaign in 2025 will be of a similar scale to that completed in 2024 with around 500m of RC drilling planned.

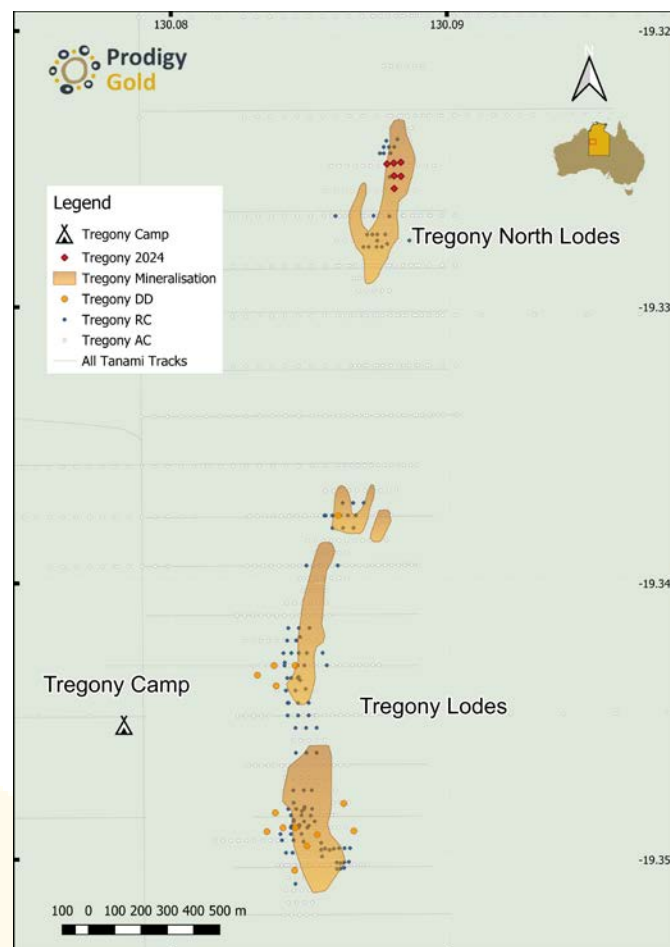

Figure 6 Location of 2024 drilling at Tregony

<sup>8</sup> ASX 6 November 2024

<sup>9</sup> ASX 3 July 2024

## **Mark's Rise and Boco**

The Mark's Rise prospect is located on EL32530 and EL31530, an area which separates EL9250 (Hyperion) to the south from EL31331 (Tregony) to the north (Figure 2). The area has been subject to limited exploration with no drilling targeting the Suplejack Shear Zone ("SSZ"). Prodigy Gold will commence on-ground exploration within this area with a program of detailed geological mapping and sampling subject to the receipt of access approvals. The approval process has been initiated with Prodigy Gold working closely with the CLC on ensuring all approvals are in place.

The Boco prospect is located approximately 4km to the north of the Tregony Mineral Resource on EL31331 and is located within the SSZ (Figure 2). Historical drilling completed by Acacia Resources in 1998 and 1999 has returned results that will require follow up exploration drilling. Much of the drilling in this area is either Rotary Air Blast ("RAB") or AC with around 75% of these holes less than 20m in depth. Prodigy Gold has reviewed the data and plans to drill some exploratory holes to further test this target. This work was initially considered for 2024, but access and priorities shifted focus back to the Hyperion and Tregony areas.

## **2024 Exploration Program – Tanami West Project**

### **Tanami West Exploration Tenements**

On 26 November 2024, Prodigy Gold announced that the Sale Agreement with Stockton Mining Limited ("Stockton") for 23 Exploration Tenements located in the Tanami region of the Northern Territory (now termed the Tanami West project) expired<sup>10</sup>.

A review of the project area includes the detailed prioritising of exploration targets over the Tanami West area (Figure 7). As management of the tenements was only recently returned to Prodigy Gold required approvals are yet to be sought. Prodigy Gold will work with the relevant authorities to gain these approvals to allow for some mapping and surface sampling works to be completed over the coming year, whilst other areas may not be accessible until the following year.

Areas of interest that have been noted by the technical team include:

- Galaxy prospect on EL31290 – located south of the historic Jims Gold Mine held by the CTPJV with historic drilling by Otter Exploration NL in 1995/96 reporting peak intercepts of 2m @ 26.8g/t Au in hole GRC031 and 4m @ 19.2g/t Au in hole JRB742<sup>11</sup>
- Blackcat prospect on EL28325 – Follow up on historically reported visible gold sampled at surface<sup>12</sup>, the prospect is located close to WA border. Historic drilling returned a best result of 3m @ 9.18g/t Au from 15m in hole BLAC100030<sup>12</sup>
- Casa prospect on EL31291 – previous drilling completed, with a peak result of 3m @ 3.52g/t Au from 75m in hole CSAC100050<sup>12</sup>
- Vampire on EL28327 – 14 kilometres north of the Old Pirate mine with previous AC drilling completed with a best result of 3m @ 2.29g/t Au from 51m in hole VMC100009<sup>12</sup>. Further work is required to follow up on previously reported visible gold from surface sampling<sup>13</sup>
- Bandit South on EL31291 – surface rock chip sampling completed at Bandit on the Old Pirate trend with highest grade of 108g/t Au recorded<sup>14</sup>.

### **Old Pirate Deposit**

The Old Pirate Deposit has previously been mined over two phases, the first phase was a small-scale trial mining operation processed using an onsite gravity plant. The second was a larger scale operation with ore mined on site and transported to the Coyote processing plant (now owned by the Blackcat Syndicate) on the WA side of the NT/WA border. The mining statistics are:

- Trial mining using gravity plant in 2013-14 – 8.1Kt @ 15.4g/t Au with 3.5Koz of gold sold
- Larger scale mining using Coyote plant in 2015-16 – 157Kt @ 5.9g/t for 29.3Koz of gold sold
- Total production of over 32Koz of gold

The Old Pirate Deposit retains a Mineral Resource of 0.8Mt @ 4.5g/t Au for 115Koz of gold<sup>15</sup> as well as significant on-site infrastructure such as haul road, 8-person camp with workshop, office, kitchen facilities, fuel storage, gravity plant, water bore & airstrip (Figure 8).

Prodigy Gold is assessing opportunities to joint venture and/or to conduct mining using a profit-sharing model. Entering into a joint venture or profit-share agreement would significantly reduce the risk and cash outlays for the Company while providing exposure to mining profits in times of historically high gold prices.

<sup>15</sup> ASX: 19 August 2016

Note: Totals may vary due to rounding. The above Mineral Resource Estimate was first reported in 2016.

## Summary

During the Northern Territory wet season Prodigy Gold has been focusing on:

- Finalising drill planning, costeaning and other exploration activities in the Tanami North region, specifically around the Hyperion and Tregony Deposit areas
- Applying for co-funding for two diamond holes in the Hyperion Deposit area
- Ensuring all required approvals are in place for these works to be completed at Tanami North project while also determining what work is possible for the Tanami West project
- Assessing all existing Mineral Resource estimations, especially the Hyperion and Tregony Deposits where drilling was completed in 2024
- Reviewing historical exploration data and available geophysical information for the Tanami West project area
- Assessing the possibility of a joint venture and/or profit-sharing arrangement for the Old Pirate Mine
- Progressing the application for the granting of the new Hyperion Mineral Lease.

**About Prodigy Gold NL**

Prodigy Gold has a unique greenfields and brownfields exploration portfolio in the proven multi-million-ounce Tanami Gold Province (Figure 9). Prodigy Gold is currently focused on the Tanami North projects with further work required to understand the potential at the Buccaneer project. The key strategic plan for Prodigy Gold over the coming 2 years includes:

- Advancing priority targets and further development of the Mineral Resources at the Tanami North project
- Reviewing the potential of the Tanami West project to determine which prospects require further works
- A mining options study on the Twin Bonanza project, including the potential for further exploration to develop oxide and transitional resources
- Systematic evaluation of all of Prodigy Gold targets to determine next steps with either further exploration, divestment or tenement relinquishment
- Support joint venture partners to expedite discovery on their projects

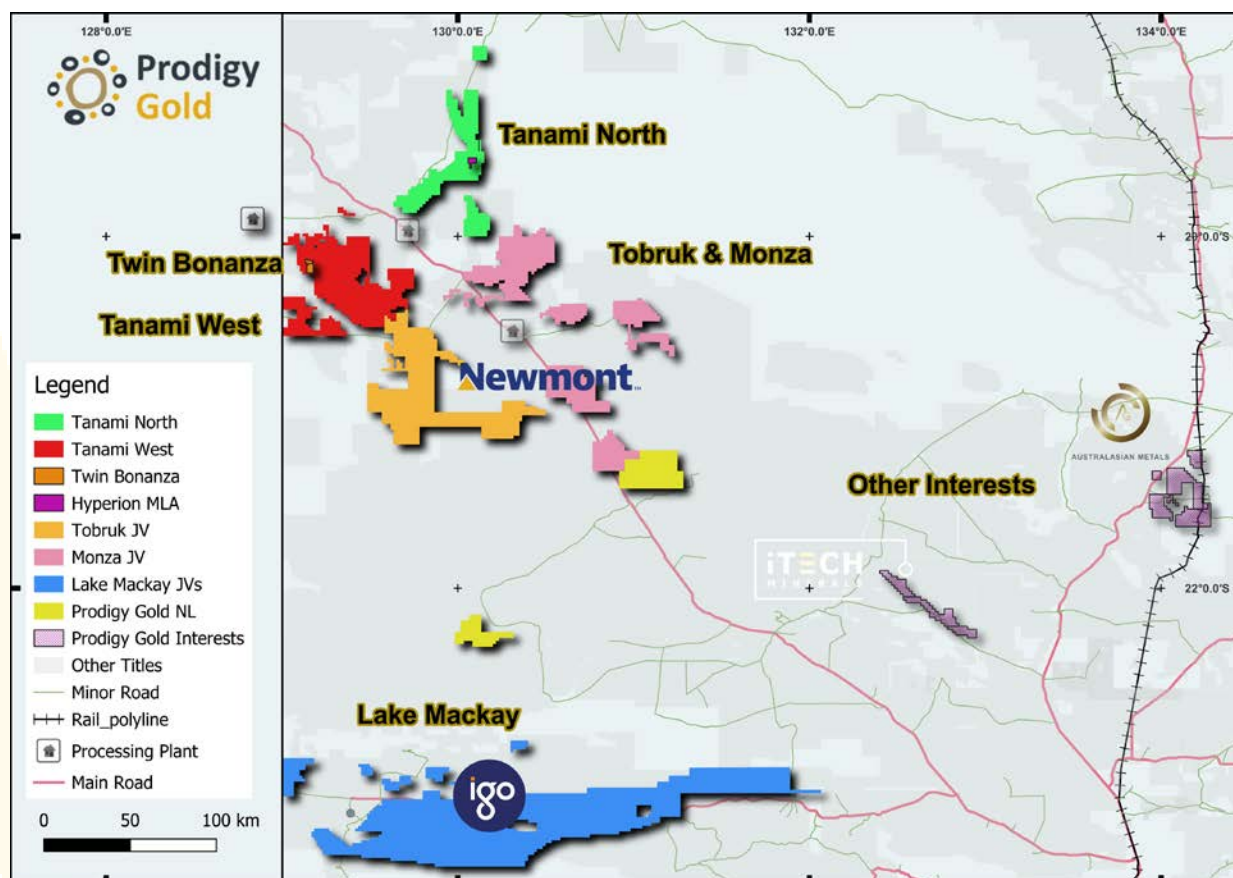

Figure 9 – Prodigy Gold major project areas

## **Competent Person's Statement**

*The information in this announcement relating to exploration works, and exploration results from the Tanami North and Tanami West projects, is based on information reviewed and checked by Mr Mark Edwards, FAusIMM, MAIG. Mr Edwards is a Fellow of the Australian Institute of Mining and Metallurgy (AusIMM) and a Member of The Australasian Institute of Geoscientists ("AIG") and has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (the "JORC Code"). Mr Edwards is a fulltime employee of the Company in the position of Managing Director and consents to the inclusion of the exploration results in the form and context in which they appear.*

*The information in this announcement relating to Mineral Resources from Buccaneer, Tregony, Hyperion and Old Pirate is based on information reviewed and checked by Mr. Mark Edwards. Mr. Edwards is a Fellow of the Australasian Institute of Mining and Metallurgy (FAusIMM – Membership number 220787) and Member of the Australian Institute of Geoscientists (MAIG – Membership number 3655) and has sufficient experience relevant to the style of mineralisation and type of deposits under consideration and to the activity he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (the "2012 JORC Code"). Mr. Edwards is a full-time employee of the Company in the position of Managing Director and consents to the inclusion of the Mineral Resources in the form and context in which they appear. Mr. Edwards also visited each project site during July-2023.*

*The Company confirms that it is not aware of any new information or data that materially affects the Mineral Resources as reported on the 29 July 2024, 3 July 2024, 11 August 2023 and 19 August 2016, and the assumptions and technical parameters underpinning the estimates in the 29 July 2024, 3 July 2024, 11 August 2023 and 19 August 2016 releases continue to apply and have not materially changed.*

*The information in this report that relates to Mineral Resources for Hyperion was previously released to the ASX on the 29 July 2024 – Updated Mineral Resource for Hyperion Gold Deposit. This document can be found at [www.asx.com.au](http://www.asx.com.au) (Stock Code: PRX) and at [www.prodigygold.com.au](http://www.prodigygold.com.au). The 29 July 2024 release fairly represents data, geological modelling, grade estimation and Mineral Resource estimates completed by Mr. Mark Edwards who is a Fellow of the Australasian Institute of Mining and Metallurgy and Member of the Australian Institute of Geoscientists. At the time of the 29 July 2024 release Mr. Edwards was a full-time employee of Prodigy Gold. Mr. Edwards has previously provided written consent for the 29 July 2024 release.*

*The information in this report that relates to Mineral Resources for Tregony was previously released to the ASX on the 3 July 2024 – Updated Mineral Resource for Tregony Gold Deposit. This document can be found at [www.asx.com.au](http://www.asx.com.au) (Stock Code: PRX) and at [www.prodigygold.com.au](http://www.prodigygold.com.au). The 3 July 2024 release fairly represents data, geological modelling, grade estimation and Mineral Resource estimates completed by Mr. Mark Edwards who is a Fellow of the Australasian Institute of Mining and Metallurgy and Member of the Australian Institute of Geoscientists. At the time of the 3 July 2024 release Mr. Edwards was a full-time employee of Prodigy Gold. Mr. Edwards has previously provided written consent for the 3 July 2024 release.*

*The information in this report that relates to Mineral Resources for Old Pirate was previously released to the ASX on the 19 August 2016 – Old Pirate Updated Mineral Resource Estimate. This document can be found at [www.asx.com.au](http://www.asx.com.au) (Stock Code: PRX) and at [www.prodigygold.com.au](http://www.prodigygold.com.au).
