

1 July 2025

ASX ANNOUNCEMENT

BURBANKS EAST HISTORICAL SHALLOW DRILL RESULTS OF UP TO 8M AT 3.37G/T GOLD

Highlights

- Extensive review of all historical exploration drilling and surface sampling data completed for Burbanks East.
- Six (6) broad surface gold anomalies identified (with limited historical drill testing), including a 2.7km anomaly (no historical drill testing).
- Historical Air Core (AC) and Rotary Air Blast (RAB) drilling returned numerous shallow significant intercepts in regolith, including:
 - 8m @ 3.37 g/t Au from 32m (KSC3339)
 - 6m @ 1.84 g/t Au from 44m (KSC3336)
 - 10m @ 0.9 g/t Au from 36m including 2m @ 3.1 g/t Au (LEB122)
 - 3m @ 4.57 g/t Au from 28m (KSC3314)
- Litho-structural review utilising all geophysical magnetic data over the Burbanks East tenure in progress targeting prospective bedrock structures or intrusions; completion in July 2025.
- Initial Reverse Circulation (RC) drill program at Miriam, focused on the Forrest and Canyon targets, remains on track to commence in July 2025.
- FBM remains well-funded to undertake all planned exploration activities through 2025 and beyond with a strong cash balance of A\$7.4 million and zero debt (as at 31 March 2025).

Future Battery Minerals Ltd (**ASX: FBM**) (**FBM** or the **Company**) is pleased to provide the results of its review of all available historical exploration data for its 100%-owned Burbanks East Project (**Burbanks East** or the **Project**), located in the W.A. Goldfields region of Western Australia.

FBM Managing Director and CEO, Nick Rathjen, commented:

"Burbanks East represents a compelling gold exploration opportunity that is complementary to our existing gold focused exploration strategy at Miriam. Within the span of a month, we have grown the Burbanks East Project footprint five-fold and confirmed its robust gold potential through the identification of six broad surficial gold anomalies, showing limited to no evidence of historical drilling. We see Burbanks East adding further gold upside to the Coolgardie Project and are currently undertaking a litho-structural review targeting prospective bedrock structures and intrusions to generate drill-ready targets at the Project."

"We're excited to commence gold-focussed drilling at Miriam this month. The Forrest and Canyon targets offer strong prospectivity, with Forrest bringing both extension and a potential near term gold resource, and Canyon offering potential discovery upside. With the Coolgardie Project being 15km from operating gold mills, it holds multiple commercial pathways to be evaluated by the Company as the targets advance through exploration."

Broad surface gold anomalies identified at Burbanks East

In June 2025, FBM staked an additional seven tenements to extend the Burbanks East tenure area near Coolgardie, bringing the total Burbanks East landholding to over 10km² and total Coolgardie Project landholding to over 75km². The new Burbanks East tenements cover a 5km strike of greenstone lithologies prospective for gold and LCT pegmatites within a proven fertile gold belt. Following these applications, FBM commenced an extensive review of all available historical data covering the new tenements to better evaluate the expanded Project's underlying gold potential.

Figure 1: Coolgardie Project area view¹

¹ Three Mile Hill refer to Focus Minerals ASX Announcement dated 1st December 2023, MacPhersons and Geko refer to Beacon Minerals' Resource and Reserves. Burbanks refer to Horizon Minerals Reserves & Resources and Bullabulling refer to Minerals 260 ASX Announcement dated 14th January 2025

Burbanks East is situated directly east (~1.5km) of the Burbanks Gold Mine (current resource 466koz @ 2.4g/t Au) owned by Horizon Minerals Ltd (ASX: HRZ) and Burbanks Mill being acquired by Auric Mining Ltd (ASX: AWJ)², and MacPhersons Reward Gold Mine (132koz @ 1.2 g/t Au) owned by Beacon Minerals Ltd (ASX: BCN). Given the Project's proximity to these established gold operations, it was anticipated that a degree of exploration had been conducted by previous owners. The Project tenure lies south along the same ultramafic package of bedrock which hosts MacPhersons Reward (refer to Figure 2 below).

Figure 2: Burbanks East – Historical Drill Hole Location Map

Much of the area had been tested by surface geochemistry. Review of these historical geochemical results pleasingly uncovered **six (6) broad (>20ppb) gold anomalies, showing limited follow-up drill testing.**

² Refer to Auric Mining ASX Announcement dated 13 March 2025

Investigation into shallow RAB and AC drilling conducted by exploration companies, Croesus Mining NL, Monarch Resource Limited, Mt Kersey Mining and Cazaly Resources during the late 1990's and early 2000's and RC drilling completed by Beacon Minerals in 2024 highlighted **numerous significant gold intercepts within regolith**, including:

- 8m @ 3.37 g/t Au from 32m (KSC3339)
- 6m @ 1.84 g/t Au from 44m (KSC3336)
- 10m @ 0.9 g/t Au from 36m including 2m @ 3.1 g/t Au (LEB122)
- 3m @ 4.57 g/t Au from 28m (KSC3314)

Figure 3: Burbanks East – X-Section Northing 6564828

While most of the drilling is shallow in nature and wide-spaced, many of the anomalous intercepts are poorly understood or not closed out and remain open to future testing. Additionally, **most of the anomalous surficial gold targets have no basement fresh rock drill testing**, including a 2.7km striking target which has no reported exploration drilling.

Figure 4: Burbanks East – Historical Near-Surface Sampling

The results of this review strongly validate the Company's low-cost, systematic approach to exploration, contributing meaningfully to FBM's understanding of the surrounding region and enabling the Company to leverage future resource potential through further derisking of the Company's exploration techniques.

Upcoming work programmes

In collaboration with Southern Geoscience, FBM is currently compiling the geophysical magnetic data of the Burbanks East area. Once this data has been compiled, a detailed structural review of the bedrock will be conducted in order to identify structures or intrusions which may be significant for gold mineralisation. The Company expects completion of this exercise and results to be released later in July 2025.

The Company aims to further evaluate and rank targets at Burbanks East with the intention of advancing the more prospective targets to drill ready status, while grant of the tenure applications continue to progress.

Complementing all ongoing exploration activities at Burbanks East, FBM remains on track to commence an initial RC drill programme at the nearby Miriam Project in July 2025. The programme is set to focus on initial targets within the Forrest prospect, which boasts historical gold intercepts, and the Canyon Target that has a 1.75km geochemical anomaly³. All key permits are in place, including an approved Conservation Management Plan and granted drilling Program of Work.

This announcement has been authorised for release by the Board of Directors of the Company.

Competent Persons Statement

The information in this announcement that relates to exploration results is based on and fairly represents information compiled by Mr Robin Cox BSc (E.Geol), a Competent Person, who is a Member of the Australian Institute of Mining and Metallurgy. Mr Cox is the Company's Chief Geologist and has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Cox consents to the inclusion in this announcement of the matters based on his information in the form and context in which it appears.

Forward-Looking Statements

This document may include forward-looking statements. Forward-looking statements include, but are not limited to, statements concerning Future Battery Minerals Limited's planned exploration programme and other statements that are not historical facts. When used in this document, the words such as "could," "plan," "estimate," "expect," "intend," "may", "potential", "should," and similar expressions are forward-looking statements. Although Future Battery Minerals Limited believes that its expectations reflected in these forward-looking statements are reasonable, such statements involve risks and uncertainties, and no assurance can be given that actual results will be consistent with these forward-looking statements.

Previously Reported Results

The information in this announcement that relates to Exploration Results is extracted from the ASX announcements (Original Announcements), as referenced, which are available at www.futurebatteryminerals.com.au. FBM confirms that it is not aware of any new information or data that materially affects the information included in the Original Announcements and, that all material assumptions and technical parameters underpinning the estimates in the Original Announcements continue to apply and have not materially changed. FBM confirms that the form and context in which the Competent Persons' findings are presented have not been materially modified from the original announcement.

About Future Battery Minerals (ASX: FBM)

THE BUSINESS: Gold and lithium exploration and development

Future Battery Minerals (ASX: FBM) is an exploration and development company focused on rapidly advancing its world-class gold and lithium projects in the Eastern Goldfields of Western Australia.

THE LOCATION: Infrastructure-rich project setting

The Eastern W.A. Goldfields is an outstanding location in which to explore for, build, and operate gold and lithium mines. It is a long-established mining province with all the accompanying benefits, including all-year land access, skilled labour, mining services and infrastructure.

We are positioned just 15km south of the mining hub of Coolgardie (via sealed road), approximately 370km to the port of Esperance and approximately 550km to Perth via road and rail. We are proximal to multiple gold and lithium mining and processing operations and development projects of substantial scale.

This available range of potential commercialisation options, including standalone development, positions us well to monetise current and future success.

THE TEAM: Proven value generators

Our carefully assembled team has an extensive track record of exploration success, project stewardship, development expertise and operating excellence that has repeatedly resulted in the delivery of substantial shareholder value: Nick Rathjen (MD), Robin Cox (Technical Director), Nev Power (Chairman), Rob Waugh (NED).

THE CAPACITY: Balance sheet strength and runway

We are a business and team that is resolutely focussed on the stewardship of our shareholders' capital and the astute application of this capital for maximal return. With a cash balance of A\$7.4 million and zero debt (as at 31 March 2025), we are well-funded to undertake our planned exploration, evaluation work programs and business development activities.

JORC Code, 2012 Edition, Table 1

Section 1: Sampling Techniques and Data

CRITERIA	EXPLANATION	COMMENTARY
Sampling techniques	- Nature and quality of sampling (e.g. cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling. - Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used. - Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done this would be relatively simple (e.g. 'reverse circulation drilling was used to obtain 1m samples from which 3kg was pulverised to produce a 30g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g. submarine nodules) may warrant disclosure of detailed information.	Historic Drilling - RC Drilling was conducted by Beacon Minerals in 2024 and released publicly on DEMIRS domain WAMEX A Number 148608 - RC was drilled to planned depths - Samples were collected as 1m samples throughout the hole. - Air Core was conducted by Monarch Resources in 2004 and released publicly on DEMIRS domain WAMEX A Number 14539 - Air Core was conducted by Cazaly Resources in 2010 and released publicly DEMIRS domain WAMEX A Number 148610 - Air Core was conducted by Mt Kersey Mining NL in 1996 and released publicly DEMIRS domain WAMEX A Number 148610 - Air core was drilled to blade refusal - Samples were collected as 2m composites throughout the hole and 1m end of holes samples. - RAB was conducted by Croesus Mining NL in 2004 and release publicly on DEMIRS domain WAMEX A Number 93409 - RAB was drilled to blade refusal - Samples were collected as 2m composites throughout the hole and 1m end of holes samples. Historic Soil Sampling - Auger soil sampling was conducted by McPhersons Reward Ltd 2024 and released publicly on DEMIRS domain WAMEX A Number 109872 & 145439 Mechanised Auger tools were used to reach depths on average of 1m to collect a soil sample
Drilling techniques	Drill type (e.g. core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (e.g. core diameter, triple or standard tube, depth of diamond tails, face- sampling bit or other type, whether core is oriented and if so, by what method, etc).	- RC collects both regolith and fresh rock sample with a open face hammer bit (5.5 inch hammer) and compressed air is utilised to push the sample up the drill rods to a where it is collected from a cyclone. - Air core collects regolith samples with a open face bit (3.5 inch blade) and compressed air is utilised to push the sample up the drill rods to a where it is collected from a cyclone - RAB collects regolith samples with a open face bit (4.25 inch blade) and compressed air is utilised to push the sample through the annulus outside of the rods to a where it is collected from a cyclone

CRITERIA	EXPLANATION	COMMENTARY
Drill sample recovery	- Method of recording and assessing core and chip sample recoveries and results assessed. - Measures taken to maximise sample recovery and ensure representative nature of the samples. - Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.	- Air core and RAB sample recovery is not recorded in the collated historic data - No relationship between recovery and sample grades has been identified
Logging	- Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies. - Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography. - The total length and percentage of the relevant intersections logged.	- Drill Chips are lithologically logged by Geologists in the field - Logging is qualitative, recording rock type and mineral species.
Sub-sampling techniques and sample preparation	- If core, whether cut or sawn and whether quarter, half or all core taken. - If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry. - For all sample types, the nature, quality and appropriateness of the sample preparation technique. - Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples. - Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half sampling. - Whether sample sizes are appropriate to the grain size of the material being sampled.	- Air core and RAB chips are collected via spears as a 2 metre or 4 metre composite - This sampling method is appropriate for the first pass nature of Air core drilling
Quality of assay data and laboratory tests	- The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total. - For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc. - Nature of quality control procedures adopted (e.g. standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (i.e. lack of bias) and precision have been established.	Historic Drilling Samples were submitted to various laboratories in Perth and Kalgoorlie laboratories in Perth where industry standard assay techniques including Aqua regia acid digest and ICP-MS/OS and FA/AAS methodologies were utilised to obtain Au grades with a lower detection limit of 0.001ppm Auger Sampling - Assays include Au at PPB level - Assays are reported to have been carried out by Kalgoorlie Assay Laboratories by method of aqua regia digest and ICPMS with a lower detection limit of 1ppb Au

CRITERIA	EXPLANATION	COMMENTARY
Verification of sampling and assaying	- The verification of significant intersections by either independent or alternative company personnel. - The use of twinned holes. - Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols. - Discuss any adjustment to assay data.	- All sampling and assay data has been retrieved from public domain WAMEX and collated within FBM cloud based system. - No adjustments to assays have occurred.
Location of data points	- Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation. - Specification of the grid system used. - Quality and adequacy of topographic control.	- All drill holes, Auger and soil samples represented in UTM MGA94 Zone 51 - Handheld GPS is the recorded location method for both Historic drill holes and surface samples
Data spacing and distribution	- Data spacing for reporting of Exploration Results. - Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied. - Whether sample compositing has been applied.	- Historic drilling has been conducted on average of 50m hole spacing and 100m line spacing - Auger sampling on average of 50m sample spacing and 100m line spacing with some area's conducted at 50mx50m
Orientation of data in relation to geological structure	- Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type. - If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.	Drilling traverse lines appear oblique to interpreted bed rock foliation. All holes are drilled vertical
Sample security	The measures taken to ensure sample security.	Any sample security measures taken have not been reported in historic reports.
Audits or reviews	The results of any audits or reviews of sampling techniques and data.	No independent audit or review has been undertaken.

Section 2: Reporting of Exploration Results

CRITERIA	EXPLANATION	COMMENTARY
Mineral tenement and land tenure status	- Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings. - The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.	Burbanks East - Consists of eight (8) prospecting lease applications P15/6924, P15/6925, P15/6975-6981 - All leases are held by Eastern Coolgardie Goldfields Pty Ltd (ECG), a 100% owned subsidiary of Future Battery Minerals Ltd - No known royalties exist on the Burbanks East lease's. - There are no material issues with regard to access. - Tenements are expected to be granted following the completion of a Heritage

CRITERIA	EXPLANATION	COMMENTARY
		Protection Agreement with the respective Native Title Party
Exploration done by other parties	Acknowledgment and appraisal of exploration by other parties.	Burbanks East Auger Sampling - Sampling conducted by Barra Resources Ltd, was released publicly on DEMIRS domain WAMEX - The report details a Auger sampling programme on tenure now covered by FBM's Burbanks East application area. - Assays include Au at PPB level - Assays are reported to have been carried out by Kalgoorlie Assay Laboratories by method of aqua regia digest and ICPMS with a lower detection limit of 1ppb Au Burbanks East Air Core - Drilling Conducted by Mt Kersey Mining NL was released publicly on DEMIRS domain WAMEX A Number 148610 - The report details Air Core drilling programme on tenure now covered by FBM's applications at Burbanks East - Air Core drilling was conducted to blade refusal depths - Assays include Au at 0.02ppm detection limit - Assays are reported to have been carried out by Analabs Kalgoorlie by method of aqua regia acid digest - Drilling Conducted by Monarch Resources Ltd was released publicly on DEMIRS domain WAMEX A Number 14539 - Assay analysis by aqua regia/AAS and FA/AAS - Air Core was conducted by Cazaly Resources in 2010 and released publicly DEMIRS domain WAMEX A Number 148610 - Assay analysis by aqua regia/AAS and FA/AAS Burbanks East RC - RC Drilling was conducted by Beacon Minerals in 2024 and released publicly on DEMIRS domain WAMEX A Number 148608 - Samples were submitted to BV Labs Kkalgoorlie and assayed FA/AAS with detection limit >0.01ppm Burbanks East RAB - RAB was conducted by Croesus Mining NL in 2004 and release publicly on DEMIRS domain WAMEX A Number 93409 - RAB was drilled to blade refusal - Samples were collected as 2m composites throughout the hole and

CRITERIA	EXPLANATION	COMMENTARY
		1m end of holes samples. Assays are reported to have been carried out by FA/ICP-OS
Geology	Deposit type, geological setting and style of mineralisation.	The tenements are prospective for lode and structurally hosted gold mineralisation hosted within Archean aged greenstone lithologies.
Drill hole Information	- A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes: - easting and northing of the drill hole collar - elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar - dip and azimuth of the hole - down hole length and interception depth - hole length. - If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.	Table 1-2 details the locations and results of historic drilling by previous operators.
Data aggregation methods	- In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (e.g. cutting of high grades) and cut-off grades are usually Material and should be stated. - Where aggregate intercepts incorporate short lengths of high-grade results and longer lengths of low-grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail. - The assumptions used for any reporting of metal equivalent values should be clearly stated.	- Gold results from Historic surface sampling and Auger soil sampling have been aggregated into numerous parameters. - FBM considers values >20ppb Au in this historic surface data to be significant for early-stage gold exploration - Gold results from historic Air Core drilling highlight values >0.1g/t. This is considered anomalous for regolith occurrences of gold.
Relationship between mineralisation widths and intercept lengths	- These relationships are particularly important in the reporting of Exploration Results. - If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported. - If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (e.g. 'down hole length, true width not known').	N/A
Diagrams	Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view	Relevant diagrams have been included within the announcement.

CRITERIA	EXPLANATION	COMMENTARY
	of drill hole collar locations and appropriate sectional views.	
Balanced reporting	Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.	N/A
Other substantive exploration data	Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.	Surface geochemistry results have been detailed in table 3.
Further work	- The nature and scale of planned further work (e.g. tests for lateral extensions or depth extensions or large-scale step-out drilling). - Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.	Future Battery is currently reviewing the new tenements with the aim of advancing potential gold targets. A geophysical litho-structural review is currently underway. If it is determined that drilling is required, the Company will announce such plans in due course.

Appendix 1 – Results
