

Exploration Update

Gladiator Resources Ltd (**ASX: GLA**) (**Gladiator** or the **Company**) is pleased to provide an update on recently completed exploration activities across its Tanzanian Uranium portfolio, with a focus on advancing the highly prospective Mkuju Uranium project.

During the recent field work campaign at the Mkuju Uranium project, Gladiator's geological team completed mapping, sampling and ground based surveys over several priority areas. This work included an assessment at the Likuyu South prospect.

Further information will be provided as soon as results are received.

The data from the recent fieldwork will directly inform the design of the next drilling campaign at Mkuju. Drilling will be focused on roll front targets in areas that haven't been drill tested to date.

In parallel with our on ground work over the last two quarters the Company has been evaluating potential additional resource and project opportunities that will both complement and advance our current portfolio.

The Company will keep shareholders updated with any material developments.

Approved for release by the Board.
