

ASX ANNOUNCEMENT

ASX:PRX

19 August 2025

ANNUAL MINERAL RESOURCE STATEMENT

Prodigy Gold NL (“Prodigy Gold” or the “Company”) is pleased to provide this annual review and summary of Prodigy Gold’s Mineral Resource Estimates as at 30 June 2025 for the Tregony, Hyperion, Buccaneer and Old Pirate deposits.

The Company’s Mineral Resource Estimates are reported in accordance with the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (the “2012 JORC Code”) and are based on documentation compiled by a Competent Person as defined by the 2012 JORC Code. All information compiled in this statement has previously been released to the ASX, with the Company’s last Annual Mineral Resource Statement reported to the ASX on 19 August 2024. No updates to the Old Pirate Mineral Resource Estimate have occurred since the last annual Mineral Resource Statement. Exploration undertaken during the financial year 2024/2025 (“FY25”) resulted in the updates of the Hyperion and Tregony Mineral Resource Estimates being completed and reported in April and June 2025 respectively. The Buccaneer Mineral Resource Estimate has also been restated to reflect the higher gold price with the cut-off grade reducing from 0.7g/t Au to 0.6g/t Au, but employing the previously used pit shell.

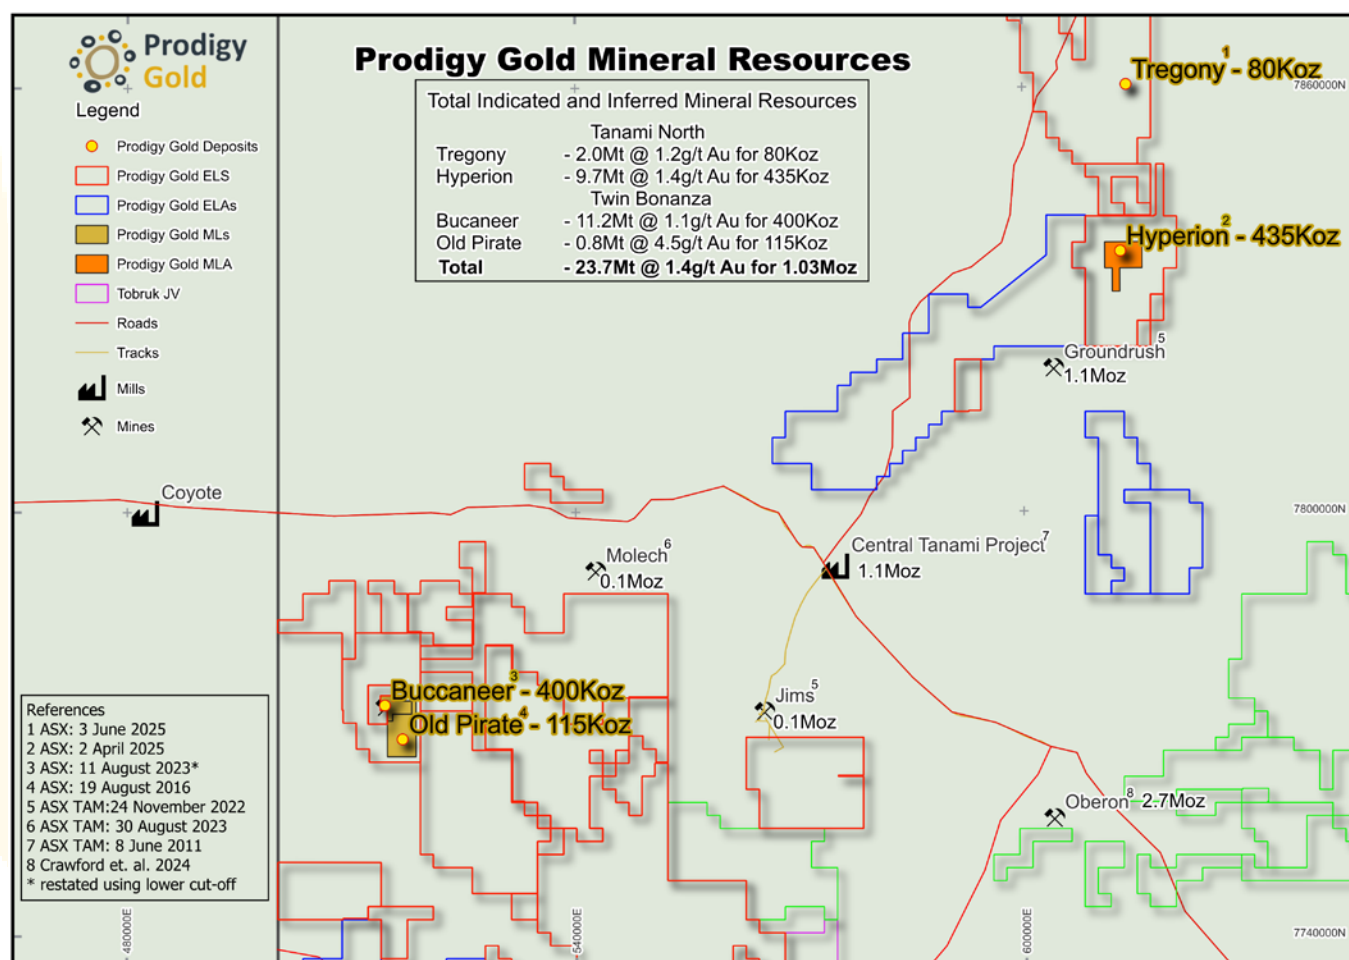

Figure 1 Location of Hyperion Mineral Resource in the Tanami region of the Northern Territory

Consolidated Resource

Prodigy Gold's Mineral Resources are located ~600km to the northwest of Alice Springs in the Tanami Region of the Northern Territory. As at the date of this report Mineral Resources are estimated to total 23.7Mt at 1.4g/t Au for 1.03Moz of gold, with Indicated and Inferred Mineral Resources reported from the Tanami North project (Tregony and Hyperion) and the Twin Bonanza project (Buccaneer and Old Pirate).

The current Mineral Resources reported highlight an increase from those previously reported as at 30 June 2024 due to the re-estimation of the Tregony and Hyperion Mineral Resources, following the completion of drilling at each of these deposits by the Company during FY25. A reduction in the lower cut-off grades used at Tregony, Hyperion and Buccaneer has also added to the overall inventory with the Mineral Resources now calculated using a lower cut-off grade of between 0.5g/t Au and 0.6g/t Au. This reduction in lower cut-off grade has been possible due to the significant increase in gold values over the past 12 months with longer term forecasts now significantly higher than in previous years.

Mineral Resources include consideration of all resource definition drilling up to 30 June 2025. Resource definition drilling was completed during FY25 at the Tregony and Hyperion deposits, and drilling is planned to continue during the FY25 period.

Table 1 Prodigy Gold Mineral Resource Summary as at 19 August 2025.

			Indicated			Inferred			Total		
Project	Date	Cut-off (g/t Au)	Tonnes (Mt)	Grade (g/t Au)	Metal (Koz)	Tonnes (Mt)	Grade (g/t Au)	Metal (Koz)	Tonnes (Mt)	Grade (g/t Au)	Metal (Koz)
Tanami North Project											
Tregony	Jun-25	0.5/0.6	0.5	1.8	30	1.5	1.0	50	2.0	1.2	80
Hyperion	Apr-25	0.5/0.6	2.4	1.6	125	7.3	1.3	310	9.7	1.4	435
Sub-Total			2.9	1.6	155	8.7	1.3	360	11.7	1.4	515
Twin Bonanza Project											
Buccaneer	Aug-23	0.6	4.8	1.1	174	6.4	1.1	225	11.2	1.1	400
Old Pirate	Aug-16	1.0	0.04	4.7	6	0.8	4.5	109	0.8	4.5	115
Sub-Total			4.8	1.2	181	7.2	1.5	334	12.0	1.3	515
Total Resource			7.8	1.3	336	15.9	1.4	694	23.7	1.4	1,029

Notes:

- All Mineral Resources are reported in accordance with the 2012 JORC Code
- Mineral Resource Estimates are not precise calculations, being dependent on the interpretation of limited information on the location, shape and continuity of the occurrence and on the available sampling results. The quantities contained in the above table have been rounded to one significant figure to reflect the relative uncertainty of the estimate for tonnes and grade. Rounding may cause values in the table to appear to have errors.
- Authors are noted as Prodigy Gold (Mark Edwards) for the Tregony, Hyperion and Buccaneer Mineral Resources and CSA Global for the Old Pirate Mineral Resources
- Tonnes are reported as dry metric tonnes
- There are no Ore Reserves reported for any of Prodigy Gold's projects
- All projects are owned 100% by Prodigy Gold
- Buccaneer Mineral Resources were determined using an optimised pit shell created in 2023 with these parameters;
 - Gold price of A\$2,960/oz which represents a 120% factoring of the 3-year forecast of gold price based on data from the Energy & Metals Consensus Forecast at US\$1,832/oz and exchange rate of \$0.74 dated June 2023.
 - Mining, processing and G&A costs of around \$56/ore tonne mined
 - Recoveries used were 95.1% for oxide, 96.7% transitional and 84.6% for fresh based on metallurgical testwork completed by metallurgical consultants IMO Pty Ltd in 2023
 - Pit wall angles of 45° in oxide and 39° in fresh and transitional (from vertical) and are based on geotechnical work completed on the 2021 diamond drilling.
- Buccaneer Mineral Resources have been re-stated using the optimised pit shell as outlined above at a lower cut-off grade of 0.6g/t Au.
- Tregony Mineral Resources are determined to be within 100m of surface using a lower cut-off grade of 0.5g/t Au in oxide material and 0.6g/t Au in transitional and fresh material based on metallurgical recoveries of 95% in oxide and 90% in transitional and fresh material.
- Hyperion Mineral Resources are determined to be within 180m of surface using a lower cut-off grade of 0.5g/t Au in oxide and transitional material and 0.6g/t Au in fresh material based on metallurgical recoveries of 95% in oxide and transitional and 80% in fresh material.
- Lower cut-off grades calculated for Hyperion, Tregony and the restated Buccaneer use a forecast exchange rate of \$0.64, US gold price of \$2,826/oz (\$Aus4,395/oz) determined using the Consensus Economics March 2025 newsletter

The Company confirms that it is not aware of any new information or data that materially affects the reported Mineral Resources for Hyperion, Buccaneer, Tregony and Old Pirate and the assumptions and technical parameters underpinning the estimates in the 3 June 2025 (Tregony)¹, 2 April 2025 (Hyperion)², 11 August 2023 (Buccaneer)³ and 19 August 2016 (Old Pirate)⁴ releases continue to apply and have not materially changed.

The Buccaneer Mineral Resource has been subjected to a high-level economic assessment with the resources being constrained within a Whittle generated optimised pit shell based on a gold price of \$2,960/oz to limit the inventory reported to align with the future prospects of eventual economic open pit extraction. For this report the lower cut-off grade has been adjusted for the Buccaneer Mineral Resource calculations to better reflect higher gold prices, with the cut-off grade reducing from 0.7g/t Au to 0.6g/t Au. For the Tregony and Hyperion Mineral Resources the inventories were limited to a depth below surface of 100m for Tregony and 180m for Hyperion. These depths were based on depths generated from earlier pit optimisation studies that were used to determine Mineral Resources in the FY23 report.

Resource Review

A detailed review of the Old Pirate project has been completed through the year and compared to the 2024 Annual Mineral Resource Statement (ASX: 19 August 2024), with the global Mineral Resource ounce inventory remaining the same. No drilling has been completed on the project over the last few years and an update is required on the deposit reflecting changes in the potential methodology of future mining to include larger scale open pit mining. Previous models have focused on the higher grade nature of the mineralisation, which may have reduced the amount of lower grade material that could be included in the estimation. An update will be undertaken during FY26 with the deposit being re-wireframed to include some of the lower grade material and will be included in future Mineral Resource updates for Prodigy Gold.

Prodigy Gold believes the use cut-off grades of 1.0g/t gold for Old Pirate are appropriate and could potentially be extracted through selective underground mining and processing through a conventional carbon in leach ("CIL") plant. Prodigy Gold also believes the use cut-off grades of 0.6g/t gold for the Buccaneer and 0.5 and 0.6g/t gold for the Tregony and Hyperion deposits as reported are appropriate and could potentially be mined by a selective open pit method and processed through a CIL plant. The cut-off grades reflect the current spot gold price consistent with industry reporting practices.

No detailed open pit mine planning or economic evaluation studies have been undertaken for any of the Mineral Resource Estimates, outside the review of the cut-off grades, to a standard where results can be reported in accordance with ASX Listing Rules and the 2012 JORC Code. The optimised shells and depth limitations used in calculating the Mineral Resources for this statement fulfil reasonable prospects for eventual economic extraction requirements as outlined within the 2012 JORC Code. Prodigy Gold is considering completing a scoping level study of all Mineral Resources over the coming financial year. The level of study may be limited due to the lack of a processing options for the Company as Prodigy Gold currently does not have access to a suitable processing facility, nor are there current plans to build a plant in close proximity to these Mineral Resources.

Governance Controls

All Mineral Resource Estimates are prepared by qualified professionals adhering to the principles of the 2012 JORC Code and follow standard industry methodology for drilling, sampling, assaying, geological interpretation, 3-dimensional modelling and grade interpolation techniques. The Mineral Resource Estimates have been calculated by a suitably qualified consultant and overseen by a suitably qualified Prodigy Gold employee (Buccaneer and Old Pirate) or have been calculated by a suitably qualified employee of Prodigy Gold (Tregony and Hyperion).

¹ ASX: 3 June 2025

² ASX: 2 April 2025

³ ASX: 11 August 2023* restated 19 August 2025

⁴ ASX: 19 August 2016

Tanami North Project Area

The Tanami North project area covers the two deposits located around the Suplejack Shear Zone and lie between the Central Tanami Joint Venture managed Crusade and Groundrush deposits. The Tanami North project area is shown in Figure 1 and includes the Tregony and Hyperion Mineral Resources, which have both been updated during the past year based on the drilling results completed by the Company in FY24 and FY25.

The Tanami North project covers several exploration tenements with the Mineral Resources located on EL31331 (Tregony) and EL9250 (Hyperion). Several other exploration targets are located on this project including the Brokenwood, Boco and Mark's Rise prospects. During 2024⁵ Prodigy Gold placed an application with the NT Government Department of Mines and Energy for a new Mineral Lease (ML34047) around the Hyperion Deposit on EL9250.

Tregony Mineral Resource

The Tregony deposit is located with the Killi Killi Formation ("KKFm") of the regional Granites-Tanami Group. The mineralisation style is described as a stacked vein array, striking roughly north south and dipping gently to steeply to the west. The local geology consists of siltstones and sandstones of the KKFm and higher gold grades are noted within quartz veins through the system. The Tregony system is located in the hanging wall of the regional Suplejack Shear Zone ("SSZ"). There are over 50 mineralised lodes defined in the project area ranging in thickness from 2m to 15m.

During FY25 the Company completed a detailed drilling campaign covering the previously released Tregony Mineral Resource. The Tregony Mineral Resource estimation is reported in the Indicated and Inferred categories, which was previously only in the Inferred category and is based on around 15,953m of RC drilling in 144 holes and 3,770m of diamond (or RC with diamond tails) drilling from 17 holes. This drilling was completed by several companies between 1996 and 2024. Of this total, Prodigy Gold completed 6 RC holes for 486m during the past year, allowing the Company to update the Mineral Resources for the previous year.

The 2025 Mineral Resource Estimation totals 2.01Mt at 1.2g/t Au for 80koz of gold within both the Indicated and Inferred categories. This differs from the previously reported result of 1.56Mt at 1.3g/t Au for 64koz of gold using a 0.6g/t Au cut-off and only reported Inferred material. The differences are the result of the drilling completed by Prodigy Gold over the past year, which has added confidence as well as inventory to the previously released results, and the reduction in lower cut-off grades used due to the higher gold price assumption for this year.

All Mineral Resources for the Tregony deposit are quoted above a 0.5g/t gold for oxide material and 0.6g/t gold cut-off grade for transitional and fresh material and are only reported to a depth of 100m below surface to limit the inventory reported, so as to align with the future prospects of eventual economic open pit extraction. The 100m depth was determined when comparing against the previously generated optimised pit shell, which was around 100 to 110m deep.

The Company plans to continue drilling the Tregony deposit over the coming year to continue the process of improving confidence in the estimation as well as grow the overall gold inventory.

Table 2 Tregony Mineral Resource Estimate

Tregony Gold Deposit - Mineral Resource Estimate June - 2025										
Material Type	Cut-off (g/t Au)	Indicated			Inferred			Total		
		Tonnes (Mt)	Grade (g/t Au)	Metal (Koz)	Tonnes (Mt)	Grade (g/t Au)	Metal (Koz)	Tonnes (Mt)	Grade (g/t Au)	Metal (Koz)
Oxidised	0.5	0.17	1.7	9.4	0.79	0.9	24.1	0.96	1.1	33.5
Transitional	0.6	0.14	1.6	7.0	0.37	1.2	15.0	0.51	1.3	22.0
Fresh	0.6	0.23	1.9	13.7	0.32	1.0	10.7	0.55	1.4	24.5
Total		0.53	1.8	30.1	1.48	1.0	49.8	2.01	1.2	80.0

Note: Reported above 0.5g/t Au and 0.6g/t Au cut-off grades and to a maximum depth of 100m below surface. Totals may vary due to rounding. The above Mineral Resource Estimate was first announced in 2025 (ASX: 3 June 2025).

⁵ ASX: 4 December 2024

Hyperion Mineral Resources

The mineralisation at the Hyperion, Tethys and Hyperion South lodes strikes east-west and is associated with a structural break between regional north-south trending thrust faults. At the Hyperion lodes, this is a shear zone hosted in differentiated dolerite, which is typically intruded by granitic dykes. These granitic intrusions are absent at Tethys. The shear zone generally trends at approximately 286 degrees and dips towards the south at 60-80 degrees. The structure is typically between 4m and 30m thick, with an average of approximately 10m true width. The Seuss structure strikes north-south and demonstrates silica-sericite-pyrite alteration with quartz-carbonate-pyrite veining and sulphide laminations. Some mineralisation occurs within horizontal stacked veins that develop within or proximal to the intersection of the north-northwest striking Seuss structure and a north-south trending mafic sediment. The mineralisation is typically 10m-50m thick with an average of approximately 20m true width.

The 2025 Mineral Resource Estimation totals 9.7Mt at 1.4g/t Au for 435koz of gold. This differs from the previously reported result of 8.6Mt at 1.5g/t Au for 407koz of gold. Resources are quoted above a 0.5g/t gold for oxide and transitional material and 0.6g/t gold cut-off grade for fresh material and to a maximum depth below surface of 180m to limit the inventory reported, so as to align with the future prospects of eventual economic open pit extraction.

The Mineral Resource Estimate was updated in 2025 following drilling completed by the Company in FY25, which totaled 17 RC holes for 1,770m completed into the updated Mineral Resource. Further drilling is planned on the deposit during the current year with the aim to provide another Mineral Resource update.

Table 3 Hyperion Mineral Resource Estimate

Hyperion Gold Deposit - Mineral Resource Estimate April - 2025										
Material Type	Cut-off (g/t Au)	Indicated			Inferred			Total		
		Tonnes (Mt)	Grade (g/t Au)	Metal (Koz)	Tonnes (Mt)	Grade (g/t Au)	Metal (Koz)	Tonnes (Mt)	Grade (g/t Au)	Metal (Koz)
Oxidised	0.5	0.64	1.5	31	1.15	1.2	45	1.79	1.3	76
Transitional	0.5	0.81	1.6	41	1.41	1.3	60	2.23	1.4	101
Fresh	0.6	0.96	1.7	53	4.69	1.4	205	5.65	1.4	258
Total		2.41	1.6	125	7.25	1.3	310	9.66	1.4	435

Reported above 0.5g/t Au/0.6g/t Au cut-off and constrained to a maximum depth of 180m below surface. Resources may not sum to equal totals due to rounding. The above Mineral Resource Estimate was first announced in 2025 (ASX: 2 April 2025).

Twin Bonanza Project Area

The Twin Bonanza project area covers the two deposits situated within the previously mined project area, west of Newmont's Tanami Operation. The Twin Bonanza project area is shown in Figure 1 and includes the Buccaneer and Old Pirate Mineral Resources, which have not seen active exploration work over the past year.

The Twin Bonanza project is located on two Mineral Leases with the Mineral Resources located on ML29882 (Buccaneer) and ML33459 (Old Pirate). Previous mining has occurred at Old Pirate, with no mining occurring since 2016. Prodigy Gold is currently assessing the Old Pirate project for future mining development, with a review of required approvals currently underway.

Buccaneer Mineral Resource

Gold mineralisation at Buccaneer is disseminated within a monzogranite porphyry and typically associated with quartz stockwork veining. Free gold is often observed in the quartz veining. Mineralisation extends from near-surface to a depth of over 500m and has been defined in several zones over an area of 2,200m by 800m. Mineralisation is often up to 150m thick with intervals of 20 to 40m wide at 1 to 5g/t gold. The deposit remains open at depth, and AC and RAB drilling suggest the potential for further strike extensions.

The updated estimate of the Buccaneer Mineral Resource was completed in FY24 using additional drilling conducted by Prodigy Gold since 2020. A total of 25 air core ("AC") holes and nine diamond core ("DD") holes have been drilled in the area. The AC holes were used to inform the mineralisation wireframes but were not used in the estimation process. The updated resource estimation also used a traditional geological and mineralisation informed wireframe domaining process compared to the previous model, which used a categorical indicator geostatistical method to identify regions

of mineralisation. It was viewed that the geological understanding of the deposit warranted a more traditional approach to define the mineralised domains.

The Company completed the update of the Buccaneer Mineral Resource incorporating recent drilling, as well as reviewing the latest metallurgical testwork and geotechnical study results. No drilling was completed on the deposit during the year with the focus continuing on the Tanami North project, however, with the return of the Tanami West project to Prodigy Gold's management focus will return to the Twin Bonanza project, which is centrally located within the larger exploration project area.

Work planned for FY26 includes the review and inclusion of all recent testwork in a mining study to determine the most efficient method to extract the Buccaneer Mineral Resources, this will include the development of an open pit mining plan which will include several processing options while a more detailed understanding of how to process the deposit is determined. At this time no further drilling is planned for the deposit until a suitable development plan is defined for the Twin Bonanza project.

Table 4 Buccaneer Mineral Resource Estimate

Buccaneer Gold Deposit - Mineral Resource Estimate August - 2023 - restated August - 2025									
Material Type	Indicated			Inferred			Total		
	Tonnes (Mt)	Grade (g/t Au)	Metal (Koz)	Tonnes (Mt)	Grade (g/t Au)	Metal (Koz)	Tonnes (Mt)	Grade (g/t Au)	Metal (Koz)
Oxidised	0.34	1.2	14	0.57	1.2	22	0.92	1.2	36
Transitional	2.14	1.1	76	1.70	1.0	54	3.84	1.1	130
Fresh	2.29	1.2	85	4.12	1.1	149	6.41	1.1	234
Total	4.77	1.1	174	6.40	1.1	225	11.17	1.1	400

Note: Reported above 0.6g/t Au cut-off and above Whittle generated shell. Totals may vary due to rounding. The above Mineral Resource Estimate was first announced in 2023 using a 0.7g/t Au cut-off grade (ASX: 11 August 2023).

Old Pirate Mineral Resource

Old Pirate is a coarse gold-bearing quartz-vein system hosted by a sequence of intercalated sandstone and shale horizons (turbidite sequence). Quartz veins, ranging from 20cm to 6m in width, host the gold mineralisation. The mineralised quartz veins preferentially follow key shale horizons within the turbidite package. The key shale horizons are generally thicker shales, with some up to 25m thick.

No drilling was completed at the Old Pirate project in FY25. The Mineral Resource has been reviewed and at this time has not been updated as no new information is available to warrant the process. During a previous review of the originally reported Mineral Resource some minor errors were identified. These have been corrected in the table below. The overall Mineral Resource has been changed from 0.76Mt @ 4.7g/t Au for 115koz of gold to 0.8Mt @ 4.5g/t Au for the same overall gold ounces. This correction is not seen as material and relates to how the tonnes and grades were allocated to each domain when calculated using the Micromine software, compared to what was originally reported in 2016. It has been determined that the Mineral Resource estimation processes followed in 2016 is deemed appropriate for this style of mineralisation and will therefore remain as has previously been reported until such time as the estimation can be updated.

Table 5 Old Pirate Mineral Resource Estimate

Old Pirate Gold Deposit - Mineral Resource Estimate August -2016									
Domain	Indicated			Inferred			Total		
	Tonnes (Kt)	Grade (g/t Au)	Metal (Koz)	Tonnes (Kt)	Grade (g/t Au)	Metal (Koz)	Tonnes (Kt)	Grade (g/t Au)	Metal (Koz)
Western Limb	12	7.6	3	305	5.3	52	317	5.4	55
Central	23	3.0	2	436	3.8	54	459	3.8	56

Total	42	4.7	6	756	4.5	109	798	4.5	115

Note: Totals may vary due to rounding. The above Mineral Resource Estimate was first reported in 2016 (ASX: 19 August 2016).

Competent Person's Statement for the Mineral Resources

The information in this announcement relating to Mineral Resources from Buccaneer, Tregony, Hyperion and Old Pirate is based on information reviewed and checked by Mr. Mark Edwards. Mr. Edwards is a Fellow of the Australasian Institute of Mining and Metallurgy (FAusIMM – Membership number 220787) and Member of the Australian Institute of Geoscientists (MAIG – Membership number 3655) and has sufficient experience relevant to the style of mineralisation and type of deposits under consideration and to the activity he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (the "2012 JORC Code"). Mr. Edwards is a full-time employee of the Company in the position of Managing Director and consents to the inclusion of the Mineral Resources in the form and context in which they appear. Mr. Edwards also visited each project site during September-2024 and April 2025.

The Company confirms that it is not aware of any new information or data that materially affects the Mineral Resources as reported on the 3 June 2025, 2 April 2025, 11 August 2023 and 19 August 2016, and the assumptions and technical parameters underpinning the estimates in the 3 June 2025, 2 April 2025, 11 August 2023 and 19 August 2016 releases continue to apply and have not materially changed.

The information in this report that relates to Mineral Resources for Hyperion was previously released to the ASX on the 2 April 2025 – Updated Mineral Resource for Hyperion Gold Deposit. This document can be found at www.asx.com.au (Stock Code: PRX) and at www.prodigygold.com.au. The 2 April 2025 release fairly represents data, geological modelling, grade estimation and Mineral Resource estimates completed by Mr. Mark Edwards who is a Fellow of the Australasian Institute of Mining and Metallurgy and Member of the Australian Institute of Geoscientists. At the time of the 2 April 2025 release Mr. Edwards was a full-time employee of Prodigy Gold. Mr. Edwards has previously provided written consent for the 2 April 2025 release.

The information in this report that relates to Mineral Resources for Tregony was previously released to the ASX on the 3 June 2025 – Updated Mineral Resource for Tregony Gold Deposit. This document can be found at www.asx.com.au (Stock Code: PRX) and at www.prodigygold.com.au. The 3 June 2025 release fairly represents data, geological modelling, grade estimation and Mineral Resource estimates completed by Mr. Mark Edwards who is a Fellow of the Australasian Institute of Mining and Metallurgy and Member of the Australian Institute of Geoscientists. At the time of the 3 June 2025 release Mr. Edwards was a full-time employee of Prodigy Gold. Mr. Edwards has previously provided written consent for the 3 June 2025 release.

The information in this report that relates to the Mineral Resources for Buccaneer was previously released to the ASX on the 11 August 2023 – Buccaneer Mineral Resource Update. This document can be found at www.asx.com.au (Stock Code: PRX) and at www.prodigygold.com.au. It fairly represents information compiled by Mr. Shaun Searle who is a Member of the Australasian Institute of Geoscientists and reviewed by Mr. Mark Edwards who is a Fellow of the Australasian Institute of Mining and Metallurgy and Member of the Australian Institute of Geoscientists. Mr. Edwards is the Mineral Resource Competent Person for this estimate. At this time of publication Mr. Edwards was a full-time employee of Prodigy Gold and Mr. Searle is a full-time employee of Ashmore Advisory Pty Ltd. Mr. Edwards and Mr. Searle have previously provided written consent for the 11 August 2023 release.

The information in this report that relates to Mineral Resources for Old Pirate was previously released to the ASX on the 19 August 2016 – Old Pirate Updated Mineral Resource Estimate. This document can be found at www.asx.com.au (Stock Code: PRX) and at www.prodigygold.com.au. The 19 August 2016 release fairly represents information reviewed by Mr. David Williams, a Competent Person who is a Member of the Australasian Institute of Mining and Metallurgy. At the time of the 19 August 2016 release Mr. Williams was a full-time employee of CSA Global Pty Ltd. Mr. Williams has previously provided written consent for the 19 August 2016 release.

Competent Person's Statement for Exploration Results

The information in this announcement relating to the Hyperion deposit, and exploration results from the Tanami North project, such as results from the Tregony and Hyperion deposits, is based on information reviewed and checked by Mr. Mark Edwards, FAusIMM, MAIG. Mr. Edwards is a Fellow of the Australasian Institute of Mining and Metallurgy (AusIMM) and a Member of The Australasian Institute of Geoscientists (AIG) and has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (The "JORC Code"). Mr. Edwards is a full-time employee of the Company in the position of Managing Director and consents to the inclusion of the Exploration Results in the form and context in which they appear.

Past Exploration results reported in this announcement have been previously prepared and disclosed by Prodigy Gold in accordance with JORC 2012, these releases can be found and reviewed on the Company website, (www.prodigygold.com.au). The Company confirms that it is not aware of any new information or data that materially affects the information included in these market announcements. The Company confirms that the form and content in which the Competent Person's findings are presented here have not been materially modified from the original market announcements. Refer to www.prodigygold.com.au for details on past exploration results.

The information in this report that relates to prior exploration results and Mineral Resources is extracted from the following ASX announcements:
