

Intensified field exploration recommences at Elizabeth Hill following inaugural drilling success

Highlights

- Phase 2 Exploration ramping up at Elizabeth Hill.
- Mapping of high priority near mine exploration targets has commenced
- Exploration planning well advanced for next phase of drilling
- Phase 2 Drilling anticipated to commence in ~6 weeks
- Quantification of near surface mineralisation ongoing
- Discussions commenced regarding the condition assessment and works required at Radio Hill processing plant owned by Artemis Resources (ASX:ARV) to process Elizabeth Hill material

West Coast Silver Limited (ASX: WCE) ('West Coast Silver' or the 'Company') is pleased to advise that it has recommenced a high intensity exploration campaign at the **high-grade Elizabeth Hill Silver Project** in the Pilbara following the completion of its inaugural drilling campaign.

Exploration Ramp Up

The Company's last few month's activities, which included completion of its inaugural drilling campaign (containing high grade shallow silver intercepts of **1,615 g/t over 13m in 25WCDD011¹ including 2m at 10,049 g/t**) and its **oversubscribed \$6M placement** West Coast have fast-tracked the start of an intensive exploration campaign at Elizabeth Hill and the surrounding near mine and regional targets.

The Company is being supported in its exploration efforts by geologists from **ERM Technical Mining Services Consultants**, with Max Nind appointed as the interim WCE Chief Geologist, and structural geologist, Dr Peter Neumayr, guiding the exploration.

Exploration at the Elizabeth Hill Silver Project has already commenced with Dr Neumayr mobilised to site to commence field mapping around Elizabeth Hill as well as at the previously reported 12 high priority near mine exploration targets².

Upcoming exploration activities in parallel to the detailed mapping will involve a drone magnetics survey aimed at acquiring high resolution magnetic data along the Munni Munni Fault. This survey aims to identify magnetic signatures that are comparable to those associated with the silver mineralisation at the Elizabeth Hill mine.

2nd September 2025

Drill targeting is also well advanced in order to further quantify the near surface silver mineralisation at the mine site. The upcoming drilling campaign will also include testing of deeper targets in and around Elizabeth Hill to confirm down dip potential. Drilling tenders have been received, and a drilling contract will be signed in the near term.

ERM is concurrently progressing works required to quantify the near surface potentially open-pittable mineralisation at the Elizabeth Hill mine site.

Discussions are also being progressed with **Artemis Resources (ASX:ARV)** with regards to the Radio Hill processing plant to assess the existing infrastructure as a potential option for the future processing of Elizabeth Hill material. Radio Hill has previously been upgraded including the installation of a “Gekko Plant” which has not been utilised. Further upgrade works and modifications may be required, and this will be determined as part of the assessment works.

Commenting on the exploration, Executive Chairman Bruce Garlick said:

“The West Coast Silver team are focused on implementing a systematic technical approach to identify and prove up the near surface mineralisation identified in our initial drilling as well as numerous high priority targets identified by ERM. The work will feed into planning the next drill program at the Elizabeth Hill project area

We are delighted to welcome Max Nind as our Chief Geologist, and our current structural geologist Dr Peter Neumayr”.

“We are in a great position as a company with a healthy cash balance and highly experienced team to unlock the value at Elizabeth Hill.”

ELIZABETH HILL SILVER PROJECT

Elizabeth Hill is one of Australia's high-grade silver projects and has a proven production history outlined below:

- **High grades enabled low processing tonnes:** 1.2Moz of silver was produced from just 16,830t of ore at a head grade of 2,194g/t (70.5 oz/t Ag)⁴.
- **Previous mining operation ceased in 2000:** because of low silver prices (US\$5)⁵.
- **Simplistic historical processing technique:** native silver was recovered via **low-cost** gravity separation techniques.
- **Untapped potential remains** in ground with deposit open at depth and recent consolidation of land package offers potential to discover more Elizabeth Hill style deposits.
- **Tier 1 Mining Jurisdiction located on a mining lease** with potential processing option at the nearby Radio Hill site.

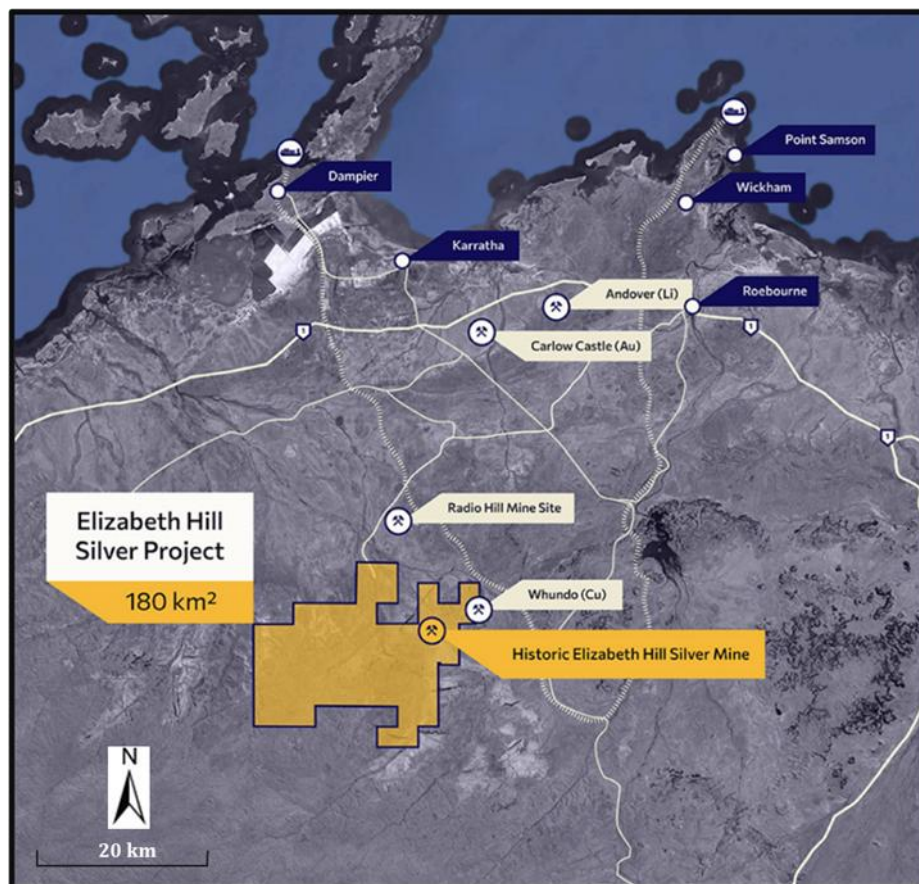

Figure 2 - Tenement Location

Through the consolidation of the surrounding land packages into a single contiguous 180km² package significant exploration and growth potential exists both near mine and regionally. The land package holds a significant portion of the Munni Munni fault system, and other fault systems subparallel to the Munni Munni fault system, which are considered prospective for Elizabeth Hill look-a-like silver deposits.
