The 5,000m RC drill program is focused on key infill drilling within the existing resource and immediate extensions to the resource, as well as drilling of newly defined targets along strike.

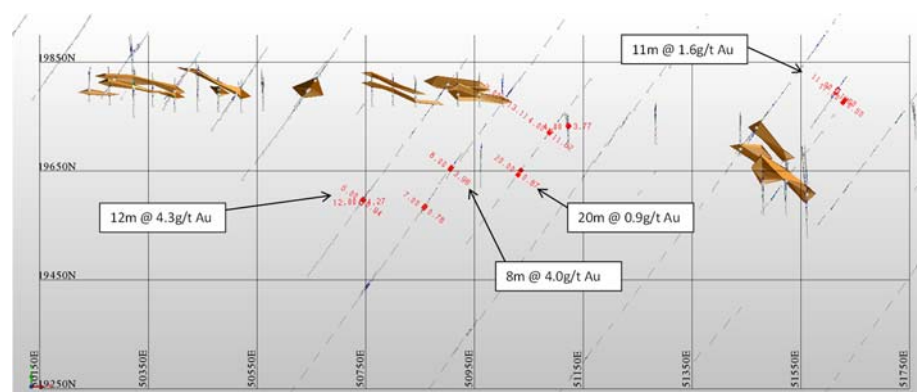

Diagram showing areas of infill and extensional drilling.

The program is expected to complete during December. On receipt of assay results the Company will update the Mt. Berghaus gold resource block model.

Following the recently announced upgrade of the Wingina Well resource, the Mt. Berghaus drilling continues the Company's strategy of achieving a 500,000 ounce plus combined resource at its Turner River Project in the next 6 months.
