## ASX ANNOUNCEMENT

### BLUE TECH BUYS FIRST NETLINKZ LICENSES IN THE UNITED STATES

After extensive internal testing of the technology, Blue Tech Incorporated ('Blue Tech') has purchased 25 Netlinkz Limited (ASX:NET) ('Netlinkz' or 'the company') software licenses to enhance its own internal network infrastructure and continues to work with Netlinkz on growing its presence in the United States (US).

Blue Tech of San Diego, California, is a network-system integrator and provider of products and services for mission critical systems and everyday operations to the US Government, Fortune 1000 companies and Universities. The business provides such solutions to some of the largest organisations in the Federal Government of the United States and was judged by *Washington Technology* to be one of the top one hundred providers (by prime contract dollars) of IT, systems integrations, telecommunications, engineering and professional services to government.

The President and Co-Founder of Blue Tech, Guy Stone commented: "Blue Tech undertook extensive internal testing of the Netlinkz technology and found it to be an extremely unique, secure and efficient network technology.

In light of this, we have deployed the technology to enhance our internal network and to help our sales teams further familiarise themselves with the technology."

"Blue Tech remains committed to working closely with Netlinkz to provide its unique networking solution to strategic cloud providers and others in our customer base. To this end, we have included the technology solution as part of number of outstanding tenders," said Guy Stone.

Netlinkz's offering has been included in a number of Blue Tech tenders that cannot be detailed for security and confidentiality purposes. The company expects to find out whether these tenders have been successful in the coming months and is working to identify new opportunities with Blue Tech.

Information on Blue Tech's cyber initiative can be found at [www.cyf4.com](http://www.cyf4.com).

Netlinkz's Executive Chairman, James Tsiolis welcomed the new development: "While this development is not significant in a short-term revenue sense, it very important for our aspirations in the US market as it provides further validation of the technology from one of the most successful and respected providers of IT products and services to US Government.

It also represents a critical next step in our trusted relationship with Blue Tech that has been built and invested into over many years."

"Netlinkz's remains appreciative of the support provided by Blue Tech and is committed to continue to proactively market the technology in partnership with Blue Tech," said James Tsiolis.
