

MANHATTAN

MANHATTAN CORPORATION LIMITED

MARCH QUARTER 2017 HIGHLIGHTS

- *Manhattan's 100% owned ISR Ponton uranium project in WA reported inferred resources of 24Mlb uranium oxide in four deposits*
- *Double 8 Inferred Resource of 17.2Mlb is located within QVSNR with Inferred Resources totalling 7Mlb uranium oxide reported for the Stallion, Highway and Shelf uranium deposits to the north, and outside, the QVSNR*
- *In addition Exploration Results reported, for the palaeochannels within QVSNR at Ponton, have identified four wide spaced drilled uranium oxide Exploration Targets*
- *Manhattan's proposal to excise E28/1898 from the reserve by a Reserves Amendment Bill is now being reviewed in light of the recently elected WA Labor government's stated policy of not to approve new uranium mines*
- *International outlook for industry remains positive with EU Report "Clean Energy for All Europeans" stating Europe's clean energy transition to 80% decarbonise the economy by 2050 cannot be achieved without nuclear power*
- *Beijing eyes nuclear power markets as nuclear power investments in 41 Silk Road countries could amount to US\$580b according to the Chairman of China National Nuclear Corp (CNNC)*
- *Australian Prime Minister, Malcolm Turnbull, announces Australia is ready to export uranium to India and is working closely with India to meet our respective requirements for the provision of fuel for India's civil nuclear program*
- *One in ten of Turnbull government MP's say nuclear power should be in Australia's energy mix*
- *UAE poll has shown that 83% of residents "highly favour" the country's planned use of nuclear energy as part of its electricity generation mix*
- **SPOT MARKET URANIUM OXIDE REMAINS DOWN AT US\$22.85 POUND**

REVIEW OF OPERATIONS

INTRODUCTION

Manhattan Corporation Limited's ("Manhattan") flagship Ponton uranium project is located approximately 200km northeast of Kalgoorlie on the edge of the Great Victoria Desert in WA. The Company has 100% control of around 1,100km² of exploration tenements underlain by Tertiary palaeochannels within the Gunbarrel Basin. These palaeochannels are known to host a number of uranium deposits and drilled uranium prospects (Figures 1 & 2).

The Company is drill testing and developing palaeochannel sand hosted uranium mineralisation amenable to in-situ metal recovery ("ISR").

FIGURE 1: MANHATTAN'S PONTON URANIUM PROJECT

On 23 January 2017 Manhattan reported an upgraded JORC Code 2012 Inferred Resource for the Double 8 uranium deposit at Ponton in WA of 17.2 million pounds ("Mlb") of uranium oxide (" U_3O_8 ") at a 200ppm cutoff. As well, maiden JORC Code 2012 combined Inferred Resources estimates for three uranium deposits at Ponton of 21.5 million tonnes ("Mt"), grading from 137 to 151ppm U_3O_8 totalling 6.97Mlb U_3O_8 at a 100ppm cutoff were reported.

The four Inferred Resource estimates reported for Ponton project are:

- Double uranium deposit of 17.2Mlb U_3O_8 at 200ppm cut off;
- Stallion uranium deposit of 3.3Mlb U_3O_8 at 100ppm cutoff;
- Highway uranium deposit of 1.9Mlb U_3O_8 at 100ppm cutoff; and
- Shelf uranium deposit of 1.8Mlb U_3O_8 at 100ppm cutoff

Exploration Results at Ponton, reported on 7 February 2014, have also identified four wide spaced drilled Exploration Targets with tonnage ranges of 4 to 45Mt, grade ranges of 250 to 450ppm U_3O_8 totalling 33 to 67Mlb U_3O_8 at the 200ppm U_3O_8 cutoff. In accordance with clause 17 of the JORC Code 2012, the potential quantity and grade reported as Exploration Targets in this report must be considered conceptual in nature as there has been insufficient exploration and drilling to define a Mineral Resource and it is uncertain if further exploration and drilling will result in the determination of a Mineral Resource.

- Double 8 of between 2.5 and 5.5Mlb U_3O_8 ;
- Stallion South of between 8 and 16Mlb U_3O_8 ;
- Highway South of between 8 and 16Mlb U_3O_8 ; and
- Ponton of between 15 and 30Mlb U_3O_8

The Double 8 uranium deposit and the four Exploration Targets at Double 8, Stallion South, Highway South and Ponton are all located on granted exploration licence, E28/1898, located mostly within the Queen Victoria Spring Nature Reserve (“**QVSNR**”) (Figures 2 & 3).

PONTON PROJECT
MANHATTAN TENEMENTS

- Exploration Licence Granted
- Exploration Licence Application
- Uranium Deposit (Inferred Resource)
- Uranium Project (Exploration Target)
- Uranium Resources
- Palaeochannel
- REE Targets-Cundeelee Carbonatites

The map shows the Manhattan Tenements area, which covers approximately 1,100 km². Key features include:

- Mulga Rock Uranium Deposits (VMY) Resource: 76Mlb U₃O₈**: Located near the top right, including Emperor, Shogun, and Ambassador deposits.
- Queen Victoria Spring Nature Reserve**: Located to the south of the tenements.
- Palaeochannels**: Labeled as "PONTON PALAEOCHANNEL" and "URANIUM TARGETS CUNDLEE CARBONATITES".
- Tenement Labels**: STALLION, SHIELD, HIGHWAY, EAST ARM, STALLION SOUTH, HIGHWAY SOUTH, DOUBLE 8, and PONTON.
- Scale and Orientation**: A scale bar indicates 0 to 20 km, and a north arrow points upwards.

Manhattan is now seeking exploration access approval to exploration licence E28/1898 located mostly within the QVSNR. The licence was granted in August 2011. On gaining exploration access to E28/1898 Manhattan will recommence drill testing and evaluation of the Double 8 uranium deposit and the four Exploration Targets identified at Double 8, Stallion South, Highway South and Ponton prospects where resource definition drilling will underpin the future development of the project.

REVIEW OF PROJECTS

1. PONTON PROJECT (WA)

Interest: Manhattan 100%

Operator: Manhattan Corporation Limited

The Ponton project area is underlain by Tertiary palaeochannels within the Gunbarrel Basin. Carbonaceous sand hosted uranium mineralisation, below 40 to 70 metres of cover, has now been defined by drilling along 55 kilometres of the palaeochannels at Stallion, Stallion South, Double 8, Ponton, Highway and Highway South prospects (Figure 3). At a depth of 40 to 70 metres the uranium mineralisation is in shallow reduced sand hosted tabular uranium deposits in a confined palaeochannel that is potentially amenable to ISR metal recovery, the lowest cost method of producing yellowcake with the least environmental impact.

Within E28/1898 approximately 6,900 metres of drilling, in 114 drill holes, was drilled and down hole gamma logged by PNC and Uranerz in 1983 to 1986. This drilling discovered the palaeochannel sand hosted uranium mineralisation at Double 8, Stallion South, Highway South and Ponton (Figure 3). Manhattan has obtained and compiled all the PNC and Uranerz exploration results including the geological drill logs, assay results, down hole gamma logs, logging tool calibrations and estimated disequilibrium factors. These drill logs and gamma logs have been digitised and verified by Manhattan's independent consultants.

In 2009 Uranio drilled 1,683 metres of aircore in 20 holes and from December 2009 to September 2016 Manhattan drilled over 52,400 metres of aircore and sonic drilling in 735 holes along the palaeochannels at Ponton to the north of the QVSNR. Manhattan and Uranio's exploration and drilling results and the historic PNC and Uranerz data have been reviewed and the Inferred Resource estimated for Double 8, Stallion, Highway and Shelf deposits and Exploration Targets reported for Double 8, Stallion South, Highway South and Ponton prospects.

**FIGURE 3: DOUBLE 8, STALLION, HIGHWAY AND SHELF INFERRED RESOURCES (IR)
DOUBLE 8, STALLION SOUTH, HIGHWAY SOUTH & PONTON EXPLORATION TARGETS (ET)**

2. DOUBLE 8 URANIUM DEPOSIT (WA)

Interest: Manhattan 100%

Operator: Manhattan Corporation Limited

The Double 8 uranium deposit is located in granted tenement E28/1898 in the southwest of the project area within the QVSNR (Figures 2 & 3).

DOUBLE 8 INFERRED RESOURCE ESTIMATES

An Inferred Resource of 7,800 tonnes (17.2Mlb) of uranium oxide at a 200ppm U_3O_8 cutoff for the Double 8 uranium deposit was reported on 23 January 2017. The reported resources are based on RC drilling by PNC in the mid 1980's. This information was prepared and first disclosed under the JORC Code 2004. This updated JORC Code 2012 resource estimate was prepared by H&SC.

Double 8 Inferred Resources

DOUBLE 8 INFERRED RESOURCE ESTIMATES				
CUTOFF GRADE eU_3O_8 (ppm)	TONNES (MILLION)	GRADE eU_3O_8 (ppm)	TONNES U_3O_8 (t)	POUNDS (MILLION) U_3O_8 (Mlb)
100	110	170	18,700	42.0
150	51	240	12,240	26.0
200	26	300	7,800	17.2
250	14	360	5,040	11.0

H&SC's resource estimate for the Double 8 uranium deposit is based on approximately 2,706m of drilling from 44 aircore holes drilled by PNC in the early 1980's along 10 kilometres of the palaeochannel at Double 8 (Figure 3). The drilling has covered an area of approximately 9 x 1.2 km of the Ponton palaeochannel. 40 holes were successfully logged for uranium decay products using a down hole gamma radiometric probe. The original analog gamma logging data has been digitized and recalibrated by the Company's consultants as digitized logs converted to eU_3O_8 .

The uranium mineralisation at Double 8 remains open and is yet to be closed off by drilling. Manhattan considers that further drilling, on 100m x 400m centres, of the Double 8 deposit and Exploration Target will expand on the reported resources and targets and the confidence levels of reported resources will improve.

DOUBLE 8 EXPLORATION TARGET

The Double 8 Exploration Target, reported in January 2014, is based on 44 drill holes totalling approximately 2,700 metres of drilling and down hole gamma logs in areas of the deposit where drill spacing is considered too wide to define a Mineral Resource to an inferred resource status.

Exploration Results have identified a drilled Exploration Target with uranium mineralisation potential, at a 200ppm U_3O_8 cutoff, at Double 8 of 4 to 8Mt grading 250 to 450ppm U_3O_8 containing 1,100 to 2,500 tonnes or 2.5 to 5.5Mlb of contained U_3O_8 .

Double 8 Exploration Target

DOUBLE 8 EXPLORATION TARGET				
CUTOFF GRADE U_3O_8 (ppm)	TONNAGE RANGE (MILLION)	GRADE RANGE U_3O_8 (ppm)	TONNAGE RANGE U_3O_8 (t)	POUNDS RANGE (MILLION) U_3O_8 (Mlb)
200	4 - 8	250 - 450	1,100 - 2,500	2.5 - 5.5

In accordance with clause 17 of the JORC Code 2012, the potential quantity and grade reported as Exploration Targets in this report must be considered conceptual in nature as there has been insufficient exploration and drilling to define a Mineral Resource and it is uncertain if further exploration and drilling will result in the determination of a Mineral Resource.

The uranium mineralisation at Double 8 remains open and is yet to be closed off by drilling. Manhattan considers that further drilling, on 100m x 400m centres, of the Double 8 deposit and Exploration Target will expand on the reported resources and targets and the confidence levels of reported resources will improve.

On gaining exploration access to E28/1898, and approval of Manhattan's Program of Work ("POW") by the Department of Mines and Petroleum ("DMP"), the Company plans to complete approximately 200 aircore drill holes for 16,000 metres of infill resource definition drilling on 400 x 100m centres along the defined palaeochannel within the reported Inferred Resource and Exploration Target areas at Double 8. This drilling program, including the resource definition drilling planned for the Stallion South, Highway South and Ponton prospects, will be completed within approximately one year of POW approval (Figure 3).

3. STALLION (WA)

Interest: Manhattan 100%

Operator: Manhattan Corporation Limited

The Stallion uranium prospect is located in E28/1523 and centred 14 kilometres northwest of the Double 8 uranium deposit at Ponton (Figures 2 & 3).

STALLION INFERRED RESOURCE ESTIMATES

An Inferred Resource of 1,490 tonnes (3.3Mlb) of uranium oxide at a 100ppm U_3O_8 cutoff for the Stallion uranium deposit was reported on 23 January 2017. The reported resources are based primarily on Manhattan's aircore and sonic drilling in 2010 and 2016. This JORC Code 2012 resource estimate was prepared by H&SC.

Stallion Inferred Resources

STALLION INFERRED RESOURCE ESTIMATES				
CUTOFF GRADE eU_3O_8 (ppm)	TONNES (MILLION)	GRADE eU_3O_8 (ppm)	TONNES U_3O_8 (t)	POUNDS (MILLION) U_3O_8 (Mlb)
100	9.9	151	1,490	3.3
150	3.6	200	720	1.6
200	1.3	253	330	0.7

H&SC's resource estimate for the Stallion uranium deposit is based on a total of 252 drill holes totalling 18,746m of drilling including 7 aircore holes for approximately 401 metres of drilling by PNC in the early 1980s and Manhattan's 226 vertical aircore drill holes totalling 16,914m and 16 duplicate sonic drill holes totalling 1,179m of drilling along 8 kilometres of the palaeochannel at Stallion in 2009 and 2010 and 3 aircore holes for 252m, utilising improved high resolution gamma probe technology, drilled into the Stallion deposit twinning previously drilled Manhattan aircore and sonic drill holes in 2016 (Figure 3). Drilling has been completed on 200m and 400m spaced lines with holes drilled at 100m centres along each grid line across the palaeochannel within mineralised zones. All drill holes were gamma logged. The original PNC analog gamma logging data has been digitized and recalibrated by the Company's consultants as digitized logs converted to eU_3O_8 .

The geological controls and style of the palaeochannel sand hosted uranium mineralisation at Stallion are similar to the mineralisation encountered at Double 8.

4. HIGHWAY (WA)

Interest: Manhattan 100%

Operator: Manhattan Corporation Limited

The Highway uranium prospect is located in E28/1523 and E39/1143 centred 15 kilometres northwest of the Double 8 uranium deposit at Ponton (Figures 2 & 3).

HIGHWAY INFERRED RESOURCE ESTIMATES

An Inferred Resource of 860 tonnes (1.9Mlb) of uranium oxide at a 100ppm U_3O_8 cutoff for the Highway uranium deposit was reported on 23 January 2017. The reported resources are based primarily on Manhattan and Uranio's aircore and sonic drilling in 2009, 2010 and 2016. This JORC Code 2012 resource estimate was prepared by H&SC.

Highway Inferred Resources

HIGHWAY INFERRED RESOURCE ESTIMATES				
CUTOFF GRADE eU_3O_8 (ppm)	TONNES (MILLION)	GRADE eU_3O_8 (ppm)	TONNES U_3O_8 (t)	POUNDS (MILLION) U_3O_8 (Mlb)
100	5.7	150	860	1.9
150	2.4	196	470	1.0
200	1.0	234	220	0.5

H&SC's resource estimate for the Highway uranium deposit is based on a total of 304 drill holes totalling 18,236m of drilling including 6 aircore holes for approximately 279 metres of drilling by PNC and 27 RC hole for approximately 1,378m of aircore and reverse circulation ("RC") drilling by Uranerz in the early 1980s, Uranio's 5 aircore holes totalling 381m in 2009, Manhattan's 260 vertical aircore drill holes totalling 15,832m and 3 duplicate sonic drill holes totalling 183m of drilling along 10 kilometres of the palaeochannel at Stallion in 2009 and 2010 and 3 aircore holes for 183m, utilising improved high resolution gamma probe technology, drilled into Highway twinning previously drilled Manhattan aircore and sonic drill holes in 2016 (Figure 3). Drilling has been completed on 200m and 400m spaced lines with holes drilled at 100m centres along each grid line across the palaeochannel within mineralised zones. All drill holes were gamma logged. The original PNC and Uranerz analog gamma logging data has been digitized and recalibrated by the Company's consultants as digitized logs converted to eU_3O_8 .

Apart from some shallow lignite hosted uranium mineralisation encountered along the northern part of the palaeochannel at Highway, the geological controls and style of the channel sand hosted uranium mineralisation at Highway are similar to the mineralisation encountered at Double 8 and Stallion.

5. SHELF (WA)

Interest: Manhattan 100%

Operator: Manhattan Corporation Limited

The Shelf uranium deposit is located along the palaeochannel approximately 10km northeast of Highway in E39/1143.

SHELF INFERRED RESOURCE ESTIMATES

An Inferred Resource of 810 tonnes (1.8Mlb) of uranium oxide at a 100ppm U_3O_8 cutoff for the Shelf uranium deposit was reported on 23 January 2017. The reported resources are based on RC and aircore drilling by Uranerz in the mid 1980's and Manhattan and Uranio's aircore drilling in 2009 and 2010. This JORC Code 2012 resource estimate was prepared by H&SC.

Shelf Inferred Resources

SHELF INFERRED RESOURCE ESTIMATES				
CUTOFF GRADE eU_3O_8 (ppm)	TONNES (MILLION)	GRADE eU_3O_8 (ppm)	TONNES U_3O_8 (t)	POUNDS (MILLION) U_3O_8 (Mlb)
100	5.9	137	810	1.8
150	1.4	187	270	0.6
200	0.3	270	80	0.2

H&SC's resource estimate for the Shelf uranium deposit is based on a total of 352 drill holes totalling 21,550m of drilling including 110 holes for approximately 5,871m of aircore and RC drilling by Uranerz in the early 1980's,

Uranio's 15 aircore holes totalling 1,302m in 2009 and Manhattan's 227 vertical aircore drill holes totalling 14,377m in 2010 (Figure 3). Drilling has been completed on 200m and 400m spaced lines with holes drilled at 100m centres along each grid line across the palaeochannel within mineralised zones along 14 kilometres of the palaeochannel at Shelf in 2010. The original Uranerz analog gamma logging data has been digitized and recalibrated by the Company's consultants as digitized logs converted to eU_3O_8 and all the Uranio and Manhattan drill holes were gamma logged.

Apart from some shallow lignite hosted uranium mineralisation encountered at the central Shelf uranium deposit the geological controls and style of the channel sand hosted uranium mineralisation at Highway are similar to the mineralisation encountered at Double 8 and Stallion.

6. STALLION SOUTH (WA)

Interest: Manhattan 100%

Operator: Manhattan Corporation Limited

Stallion South is located immediately to the south of Stallion and northwest of Double 8 along the Ponton palaeochannel. This prospect is within granted licence E28/1898 within the QVSNR (Figures 2 & 3).

The drilled uranium mineralisation at Stallion South is also hosted in palaeochannels within reduced carbonaceous sands and weathered granitic sands in a confined aquifer overlying crystalline granite basement.

STALLION SOUTH EXPLORATION TARGET

The Stallion South Exploration Target, reported in January 2014, is based on 13 drill holes totalling approximately 780 metres of drilling and down hole gamma logs. This drilling, on approximately 400m x 3km centres along the palaeochannel, is considered too wide to define a Mineral Resource to an inferred resource status.

Exploration Results have identified a drilled Exploration Target with uranium mineralisation potential at a 200ppm U_3O_8 cutoff, for Stallion South of 12 to 24Mt grading 250 to 350ppm U_3O_8 containing 3,600 to 7,300 tonnes or 8 to 16Mlb of contained U_3O_8 .

Stallion South Exploration Target

STALLION SOUTH EXPLORATION TARGET				
CUTOFF GRADE U_3O_8 (ppm)	TONNAGE RANGE (MILLION)	GRADE RANGE U_3O_8 (ppm)	TONNAGE RANGE U_3O_8 (t)	POUNDS RANGE (MILLION) U_3O_8 (Mlb)
200	12 - 24	250 - 350	3,600 - 7,300	8 - 16

In accordance with clause 17 of the JORC Code 2012, the potential quantity and grade reported as Exploration Targets in this report must be considered conceptual in nature as there has been insufficient exploration and drilling to define a Mineral Resource and it is uncertain if further exploration and drilling will result in the determination of a Mineral Resource.

On gaining exploration access to E28/1898, and approval of Manhattan's POW by DMP, the Company plans to complete approximately 250 aircore drill holes for 20,000 metres of infill resource definition drilling on 400 x 100m centres along the defined palaeochannel at Stallion South. This drilling program, including the resource definition drilling planned for Double 8 and the Highway South and Ponton prospects, will be completed within approximately one year of POW approval (Figure 3).

7. HIGHWAY SOUTH (WA)

Interest: Manhattan 100%

Operator: Manhattan Corporation Limited

Highway South is centred 5km along the palaeochannel to the northeast of Double 8. This prospect is within granted licence E28/1898 within the QVSNR (Figures 2 & 3).

The drilled uranium mineralisation at Highway South is also hosted in palaeochannels within reduced carbonaceous sands and weathered granitic sands in a confined aquifer overlying crystalline granite basement.

HIGHWAY SOUTH EXPLORATION TARGET

The Highway South Exploration Target, reported in January 2014, is based on 33 drill holes totalling approximately 1,980 metres of drilling and down hole gamma logs. This drilling, on approximately 400m x 2km centres along the palaeochannel, is considered too wide to define a Mineral Resource to an inferred resource status.

Exploration Results have identified drilled Exploration Targets with uranium mineralisation potential at a 200ppm U_3O_8 cutoff, for Highway South of 12 to 24Mt grading 250 to 350ppm U_3O_8 containing 3,600 to 7,300 tonnes or 8 to 16Mlb of contained U_3O_8 .

Highway South Exploration Target

HIGHWAY SOUTH EXPLORATION TARGET				
CUTOFF GRADE U_3O_8 (ppm)	TONNAGE RANGE (MILLION)	GRADE RANGE U_3O_8 (ppm)	TONNAGE RANGE U_3O_8 (t)	POUNDS RANGE (MILLION) U_3O_8 (Mlb)
200	12 - 24	250 - 350	3,600 - 7,300	8 - 16

In accordance with clause 17 of the JORC Code 2012, the potential quantity and grade reported as Exploration Targets in this report must be considered conceptual in nature as there has been insufficient exploration and drilling to define a Mineral Resource and it is uncertain if further exploration and drilling will result in the determination of a Mineral Resource.

On gaining exploration access to E28/1898, and approval of Manhattan's POW by DMP, the Company plans to complete approximately 250 aircore drill holes for 20,000 metres of infill resource definition drilling on 400 x 100m centres along the defined palaeochannel at Highway South. This drilling program, including the resource definition drilling planned for Double 8 and the Stallion South and Ponton prospects, will be completed within approximately one year of POW approval (Figure 3).

8. PONTON (WA)

Interest: Manhattan 100%

Operator: Manhattan Corporation Limited

Ponton is located along the palaeochannel to the southeast of Double 8. This prospect is within granted licence E28/1898 within the QVSNR (Figures 2 & 3).

The drilled uranium mineralisation at Ponton is also hosted in palaeochannels within reduced carbonaceous sands and weathered granitic sands in a confined aquifer overlying crystalline granite and Patterson Group shale basement.

PONTON EXPLORATION TARGET

The Ponton Exploration Target, reported in January 2014, is based on 24 drill holes totalling approximately 1,440 metres of drilling and down hole gamma logs. This drilling, on approximately 1km x 1km centres along the palaeochannel, is considered too wide to define a Mineral Resource to an inferred resource status.

Exploration Results have identified drilled Exploration Targets with uranium mineralisation potential, at a 200ppm U_3O_8 cutoff, for the Ponton prospect of 23 to 45Mt grading 250 to 350ppm U_3O_8 containing 6,800 to 13,600 tonnes or 15 to 30Mlb of contained U_3O_8 .

Ponton Exploration Target

PONTON EXPLORATION TARGET				
CUTOFF GRADE U ₃ O ₈ (ppm)	TONNAGE RANGE (MILLION)	GRADE RANGE U ₃ O ₈ (ppm)	TONNAGE RANGE U ₃ O ₈ (t)	POUNDS RANGE (MILLION) U ₃ O ₈ (Mlb)
200	23 - 45	250 - 350	6,800 - 13,600	15 - 30

In accordance with clause 17 of the JORC Code 2012, the potential quantity and grade reported as Exploration Targets in this report must be considered conceptual in nature as there has been insufficient exploration and drilling to define a Mineral Resource and it is uncertain if further exploration and drilling will result in the determination of a Mineral Resource.

On gaining exploration access to E28/1898, and approval of Manhattan's POW by DMP, the Company plans to complete approximately 300 aircore drill holes for 24,000 metres of infill resource definition drilling on 400 x 100m centres along the defined palaeochannel at the Ponton prospect. This drilling program, including the resource definition drilling planned for Double 8 and the Stallion South and Highway South prospects, will be completed within approximately one year of POW approval (Figure 3).

SUMMARY

Manhattan completed a drilling program at Ponton in September 2016 that delivered the required information to complete and report, on 23 January 2017, an upgraded JORC Code 2012 Inferred Resource for the Double 8 uranium deposit at Ponton in WA of 17.2 million pounds of uranium oxide.

As well, maiden JORC Code 2012 combined Inferred Resource estimates at Ponton were reported in January 2017 totalling 6.97Mlb uranium oxide for the Stallion, Highway and Shelf uranium deposits to the north of the QVSNR.

The four Inferred Mineral Resources reported in January 2017 of over 24Mlb uranium oxide at Ponton, along with the Exploration Targets previously reported in 2014 of 33 to 67Mlb uranium oxide.

These updated and Resource Estimates and Exploration Targets are now being utilised to revise Manhattan's scoping study for the Ponton ISR uranium project that will include resource estimates, in-situ leach, ion exchange and solvent extraction metal recovery analysis, operating costs, infrastructure requirements and capital expenditure estimates.

The previous scoping study, undertaken by Tetra Tech Consultants in 2011, indicated the geology and mineralogy of the relatively shallow sand hosted deposits are amenable to ISR solution mining at relatively low cost, with minimal capital requirements making the project comparatively fast and economic to build, and relatively simple to operate.

Manhattan's key licence at Ponton, E28/1898, is located mostly within the remote QVSNR, 200km east northeast of Kalgoorlie.

Whilst a proposal has been developed to excise granted E28/1898 (that equates to 6% or 160km² of the 2,700km² QVSNR) from the reserve by a Reserves Amendment Bill in the WA parliament this proposal is being reviewed in light of the recently elected WA Labor government's stated policy of not to approve any new uranium mines. The policy is at odds with the four new uranium development projects at Yeelirrie, Kintyre, Wiluna and Mulga Rock in WA that have WA state and federal environmental approvals to be developed when world prices improve.

The Ponton project has reported JORC Inferred Resources and Exploration Targets of 57Mlbs to 91Mlbs making it the third largest uranium resource project in WA that positions Ponton as a project of key regional, state and national significance.

Positive developments continue in the uranium and nuclear industry with global energy consumption from nuclear power projected to increase by 78% from 2014 to 2040. Most of this growth is expected to come from new nuclear power plants in China (21 plants under construction) and India with 5 plants being constructed (IEA's World Energy Outlook 2016).

International outlook for industry remains positive with EU Report by Foratom (the European nuclear trade body) "Clean Energy for All Europeans" stating Europe's clean energy transition to 80% decarbonise the economy by 2050 cannot be achieved without nuclear power (WNN 18 April 2017).

As Beijing's interest in renewable and non-traditional sources of energy grows Chinese companies eye nuclear power markets as nuclear power investments in 41 Silk Road countries could amount to US\$580b according to the Chairman of China National Nuclear Corp (CCNC) (Oilprice.com 17 April 2017).

Australian Prime Minister, Malcolm Turnbull announces, in a joint news conference with his Indian counterpart Narendra Modi in New Delhi, Australia is ready to export uranium to India and is working closely with India to meet our respective requirements for the provision of fuel for India's civil nuclear program (Pakistan Observer 13 April 2017).

One in ten of Turnbull government MP's say nuclear power should be in Australia's energy mix (Southern Cross News 16 March 2017).

A national poll has shown that 83% of residents of UAE "highly favour" the country's planned use of nuclear energy as part of its electricity generation mix (WNN 5 April 2017).

Spot prices of uranium dipped to a 13 year low late last year, rebounded modestly to around US\$28lb in mid-March and now back to around US\$23lb. Uranium prices have remained weak since the 2011 tsunami in Japan that led to the shutdown of the country's 55 nuclear reactors.

However, we believe uranium prices are set to head higher with 447 reactors supplying 2.5TWh of electricity to over 30 countries around the world and 59 new plants under construction. These new reactors, along with the established operating units, will put pressure on the demand for primary fuel supply in an environment of contracting supply. China National Nuclear Corp (CCNC) (Oilprice.com 17 April 2017).

As reported in our 31 March 2017 Appendix 5B Cash Flow Report Manhattan has limited cash resources. Material to this in April 2017 the Company received an R&D refund of \$101,000 and currently retains cash reserves of \$135,000. The Company will require a capital injection in the coming months and the Board is pursuing various options and avenues to complete the capital raising required in May 2017.

ALAN J EGGERS

Executive Chairman
27 April 2017

COMPETENT PERSON'S STATEMENT

The information in this Report that relates to reported Exploration Results or Mineral Resources is based on information compiled by Mr Alan J Eggers, who is a Corporate Member of the Australasian Institute of Mining and Metallurgy ("AusIMM"). Alan Eggers is a professional geologist and an executive director of Manhattan Corporation Limited. Mr Eggers has sufficient experience that is relevant to the style of mineralisation and type of mineral deposits being reported on in this Report and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves "JORC Code 2012". Mr Eggers consents to the inclusion in this Report of the information on the Exploration Results or Mineral Resources based on his information in the form and context in which it appears.
