ASX RELEASE

13th June 2017

Yandal West Update

Further to the announcement dated 17 May 2017, Great Western Exploration Limited ("**the Company; Great Western**") is pleased to advise that the planned soil and aeromagnetic surveys at its Yandal West gold project ("**Yandal West**") are now complete and are in the process of being analysed, including multi-element laboratory analysis.

These surveys were designed to assist with the identification of important faults that are interpreted to be the primary controls of the significant gold mineralisation observed throughout the project area. This is the first time the consolidated area has been subject to such a systematic exploration programme using modern techniques.

The Company is also pleased to report that additional areas of prospective geology that includes shearing, quartz veining and gossans were discovered during the field programme. These areas were not previously known and have not been subject to any previous exploration. The recognition of prospective outcropping geology not previously explored provide the company with further encouragement and validate the decision to undertake a systematic exploration programme.

The Company collected 1,236 soils samples on a broad grid (18 lines) that was confined to the central and southern regions of the project area.

The aeromagnetic survey collected approximately 1,500 line kilometres of detailed low-level data that covered the entire Yandal West project area. The final data was received yesterday, and the Company has verified it is of good quality. Processing of the data has commenced, and the Company has engaged Bill Amann at Newexco to carry out an initial independent interpretation of the data.

The Company looks forward to reporting the interpretation of the results from both programmes which, together with planned geological mapping, will facilitate a targeted drilling programme. The recently announced Sandfire JV means that the company has the resources to complete the campaign in a manner which it believes will deliver positive outcomes at Yandal West.
