JUNE QUARTERLY ACTIVITY REPORT

Lindian Resources Limited (the Company) provides the following update to shareholders in respect to the Company's activities for the June 2017 quarter.

Uyowa Project

During the quarter, a reassessment of the diamond drill core drilled by Lake Victoria Goldfield was completed. This reassessment includes core re-arrangement, core re-logging and developing a database. An ongoing mapping program aims to understand the geology, structural and mineralization trends for the area. Some soil samples will be taken upon the completion of the mapping program to identify more drilling targets. A total of 11 holes have been re-logged. The purpose of re-logging the core is to understand the geology, structure and recovery of the project area. Consequently, some samples will be taken from the core and then will be submitted to geochemical laboratory for assaying. The core has been re-logged for parameters including geology, structure and recovery. After re-logging the core, it will be sampled and then the samples will be submitted to geochemical laboratory for assaying. The database for storing all data gathered from field has been established. The photos below illustrate the ongoing process of core logging.

Proposed Exploration

Lindian plans to continue re-logging the holes drilled by Lake Victoria Gold as well as assay the mineralized zones. These results will be combined with the diamond drilling planned for later in 2017 to produce a JORC resource.

Additional targets will be advanced through geological mapping, soil sampling and ground magnetic surveys within the two new applications. This will commence as soon as the tenements are granted which is expected to occur later this year.

Competent Person Statement

The information on the page that relates to Exploration Results is based on information compiled or reviewed by Mr Matt Bull, who is a director of Lindian Resources Limited. Mr Bull is a member of the Australian Institute of Geoscientists and has sufficient experience of relevance to the styles of mineralisation and the types of deposits under consideration, and to the activities undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Bull consents to the inclusion in this report of the matters based on information in the form and context in which it appears.

About the Uyowa Project

The Uyowa Gold Project is located within the renowned Lake Victoria Gold Fields in Western Tanzania. Previous exploration has highlighted a 13 kilometre long soil and auger drilling anomaly that has been partially tested by RC and diamond drilling. Previous exploration of 2,486 metre reverse circulation drilling identified two narrow, but continuous, gold rich zones extending approximately 1.3 kilometres in strike length.

Notes

1. The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity that wishes to disclose additional information is encouraged to do so, in a note or notes included in or attached to this report.
2. If this quarterly report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, AASB 6: Exploration for and Evaluation of Mineral Resources and AASB 107: Statement of Cash Flows apply to this report. If this quarterly report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
