Review of Operations

Strategy and Developments

During the 2017 Financial Year the Company has actioned a clear strategy of maintaining a low capex model whilst generating opportunities within the technology sector that are usually only made available to major players in the industry. The main reason for this is the Company's technology differential and business strategy that empowers clients to generate revenue from avenues in their business they never thought possible. TV2u's white labelled analytics service offering has provided TV2U with opportunities in a number of jurisdictions.

The Company recognized it is labeled as a "start up" company, however we are and will continue to progress on a number of fronts to move the move the Company forward.

The level of interest in the technology of TV2U from various industries is encouraging and endorses the unique capabilities of the technology. Commercial success is always an absolute focus and a more concerted effort has been made in the last 12 months to educate the market on the unique technology TV2U has access to. This was highlighted in September 2016 when the company was humbled to become a finalist in the Managed Services World Congress Awards. The Innovation Award finalist award is given to a company that best exemplifies innovation in technology, business change or operational transformation. TV2U, which was nominated for its Intelligent Video Accessible Network (IVAN), joins other leading companies like Chinese mobile device company Huawei, NEC subsidiary Netcracker Technology and telecommunications leaders Vodafone and Nokia as shortlisted finalists.

With the above technology, the Company was able to convert business opportunities around the globe into initial contracts for it services in Brazil and Indonesia. To achieve these outcomes, there has been an investment in resources required including the employment of an excellent technical team to further develop and maintain the Company's cutting-edge technology. In the latter half and 2016 early 2017 the Company focused on satisfying all the requirements to provide services in Indonesia, and Brazil from a technical aspect and also concentrated on finalising the commercial arrangements with interested parties within these jurisdictions.

The TV2U development team continues to expand the feature set of its industry leading Cloud Technology OTT platform which has successfully been approved in three recent POC's.

The company reorganized its Board in early 2017, with the objective of focusing more heavily on execution of business opportunities, better overall business management, and generation of income from revenues.

A contract to provide the technology for OTT services was closed with SOL Telecom in Brazil, on 28th February 2017. In June 2017, TV2U commenced the implementation of the services. The service has been in 'soft launch' during August and will continue during September, in parallel TV2U is finalizing outstanding agreements with content owners, operational support services and marketing channels. The service is anticipated to 'hard launch' in October 2017, from which point the services will become fully available to the Brazilian consumer market via ISP Operators.

A contract to provide the technology for OTT services was also closed with PGASCOM in Indonesia, on 23rd June 2017. In June 2017 TV2U commenced initial implementation of these services. The first Operator in Indonesia that intends to launch our services to their consumer base is SmartFren. The launch of services is currently dependent on finalization of the initial contract terms with PGASCOM

(expected within September 2017) and separately finalization of the content negotiations with the Hollywood studios, which is expected to complete in October 2017. Services are then expected to immediately 'hard launch' to consumers.

Several additional developments have been implemented that will enhance the company's attractiveness to its target customer bases, including the design of a world-first set-top-box and the re-engineering of its "ivan-X" middleware product to become a toolset that customers can access via the web, enabling them to get content to their audiences within a matter of days.

The company continues to develop additional opportunities for the sale of OTT services, with particular focus on the LATAM and APAC regions at this time.

In addition to OTT services, TV2U has explored options to extend its services into additional business lines, that it sees as adjacent opportunities primarily serving a substantially similar customer base as for OTT (e.g. Operators and ISPs). On 26th June 2017, the company entered into a non-binding Letter of Intent with Talico Technologies (an associated business owned by Chairman Nick Fitzgerald), that subject to shareholder approval will give TV2U the exclusive rights to exploit intellectual property within the markets of Smart Home, Transport and e-Learning. Talico Technologies has developed a qualified sales pipeline and should shareholders approve the IP License agreements when presented to them, TV2U will immediately take over full management and exploitation of these new areas of business, including any contracted or immediately pending sales opportunities.
