

Update on MESMER™ sales to Latin American Federal Prison Operator

Further to its announcement on 10 October 2017, Department 13 International Limited (ASX:D13) provides this further update on its initial announcement.

The sale of two MESMER v1.5 units have been made to Phoenix Group, a world-class security company with more than 20 years' experience in maritime security, airport security, security training, intelligence and investigations, security consulting and supply chain security. D13 has been advised by the Phoenix Group that the end customers are 2 separate prisons in Latin America. Due to client confidentiality D13 is not able to advise the actual prisons or location.

As outlined in the announcement on 10 October 2017, the sales of these units into a new geographical location and industry parallel represents significant opportunity for the Company. Again because of commercial and client confidentiality the actual sales price of the units cannot be disclosed but is not inconsistent to previous statements made by the company that it will sell MESMER v1.5 units at upto US\$400,000 per unit subject to final configuration and ancillaries. The receipt of the deposit will assist the Company to offset the costs of goods to manufacture the units for delivery to the client.

About Department 13

Based in Maryland, Department 13 (D13) was founded in 2010 by a team of former military operators, scientists and engineers who apply proprietary innovative advanced technology to emerging requirements. D13 is developing cutting-edge software and communication systems that have the potential to transform the networking and communication fields as well as current applications in drone defense, mobile phone IT security and secure enhanced Android phone systems. D13 is engaged with multiple counter UAS projects to provide strategic solutions for civil, military and commercial security requirements. D13 has 17 patents and 28 patent applications in the development of wireless protocol manipulation and communication networking software with applications in drone defense, local area and wide area cellular communications and networking, enhanced data bandwidth for all digital communications, cyber security for mobile devices and sophisticated RF technology applications (radiometrics).
