UK Frequency Regulator confirms Bringing into Use (BIU) Classification of 3 Diamonds satellites

Sky and Space Global Ltd (ASX: **SAS**, “**Sky and Space Global**” or the “**Company**”) is pleased to announce that it has received formal approval from the United Kingdom communications regulator, Ofcom, confirming the ‘bringing into use’ (BIU) classification of its 3 Diamonds nanosatellites.

BIU is a critical regulatory classification step that confirms the existence of an actual satellite in space by proving the capability of transmitting or receiving signals from a space station, deployed and maintained at a specific orbit for a continuous period of 90 days.

This marks a significant technical milestone for the Company, and is another critical part of the unique intellectual property and value that has been created for all SAS shareholders to date.

This process is part of the Satellite Filing procedures required by the International Telecommunication Union (ITU) and local regulators such as Ofcom, for specific frequency registration.

The SAS ITU filings for the frequencies related to the SSG-CSL and SSG-3D satellite systems used for the launch of the 3 Diamonds have been validated by the regulators. This is a major step for SAS as this provides regulatory confirmation of its ability to deliver services using the 3 Diamonds.

The 3 Diamonds nanosatellites were launched on 23/06/2017 and completed the required continuous operation period of 90 days on 23/09/2017.

--Ends--

About Sky and Space Global Ltd

Sky and Space Global Ltd is an ASX listed (SAS) satellite company with European and Israeli centres of Aerospace, Satellite and Software Industry Experts.

The Company's core business is to operate a communications infrastructure based on nanosatellite technology and develop highly sophisticated software systems that will deploy, maintain orbit control and handle the communication network in space to provide a global coverage. The Company successfully launched its first three nanosatellites, the '3 Diamonds', into space in June 2017 and is preparing for the launch of a constellation of 200 more nanosatellites by 2020.

The Company's vision is to provide affordable communication coverage and services to anyone, anywhere, anytime with relatively low maintenance costs. This will enable Sky and Space Global to deliver cost-effective communications infrastructure and services to those who need it most and to disrupt the telecommunications and international transport industries. Sky and Space Global Ltd owns 100% of Sky and Space Global (UK) Limited.
