### Tisová Co Au Cu Project Update – Czech Republic

Assay results for the first two holes (TIDD002 &TIDD003) at Tisová of the 4-hole drilling program have been received. The Cu Co assay results have not replicated the results obtained from grab samples reported from historic waste dumps on site. Gold results (including 8m@0.97g/t Au) are closer to expectations, however the cobalt and copper results are both: lower grade, and across narrower intervals than expected from the visual logging of the core. Results for target metals from all samples are presented in Table 2.

With the onset of the northern winter, exploration activity has now been suspended in the Czech Republic and can only resume post snow melts in 2018.

Samples from the final two holes (TIDD001 & TIDD004) have been dispatched to the ALS laboratory in Romania and results are expected by the end of December.

**CEO Dr Andrew Tunks said.** "The assay results to date are disappointing and not in line with our expectations. Thick zones logged as disseminated sulphides have returned lower than expected values for the target metals and where grades are reasonable, thicknesses are narrow and below minimum mining widths. We await the results of the second two holes before formulating our future exploration plans.

Clearly the material we have drilled is substantially different from the samples we collected from the Tisová waste dumps. This points to a strong metal zonation within the Tisová orebody. We will review the 3D model of the sulphides and look to investigate geophysical methods to identify further sulphide bodies as a possible source of Co mineralisation in the dumps.

Table 1 Tisová (TIDD002-003) Table of mineralised intercepts.

Mineralised Intercepts Table
TIDD002 - 0.5m @ , 0.01% Co, 0.24g/t Au, <b>2.4% Cu</b> [412.8m]
TIDD003 - <b>8.0m</b> @ 0.05 Co, <b>0.97g/t Au</b> , 0.2% Cu [380.3m]
including
1.0m @ <b>0.14%</b> Co, <b>2.84g</b> /t Au, 0.8% Cu [380.25m]
TIDD003 - 0.5m @ 0.02 Co, <b>0.81g</b> /t Au, 0.1% Cu [394m]
TIDD003 - 2.0m @ 0.06% Co, <b>0.79</b> g/t Au, 0.1% Cu [416m]
TIDD003 - 0.5m @ 0.35% Co, <b>4.07</b> g/t Au, <b>0.7</b> % Cu [421.9m]
TIDD003 - 0.5m @ 0.01% Co, 0.1g/t Au, <b>3.1</b> % Cu [442m]

Auroch has been exploring at Tisová is under the terms of an Option Agreement that expires in March 2018. The Company has fulfilled its obligations under the agreement – which included 4 drill holes for 1200m (actual 1340m drilled) to test the spatial distribution of Co and Cu (also Au & Ag) at Tisová and will await final results of holes 3 and 4 before making an election on the option arrangement.

Should Auroch elect to proceed with the acquisition there is a further Cash payment of A\$75,000 and 4,375,000 fully paid ordinary shares to be issued. There is also a deferred consideration of 5,000,000 additional fully paid ordinary shares should certain conditions/performance targets be met (see ASX release 3/July/17)

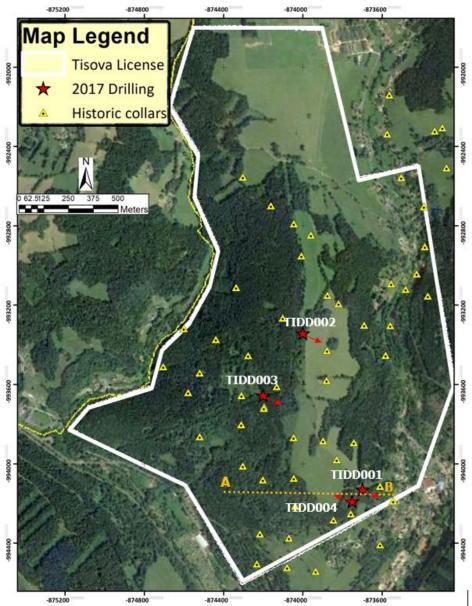

Figure 2 Tisová licence outline with drill hole location plan on Google Earth imagery (collars from current drilling program highlighted). Red stars are Auroch holes arrows show drilling azimuth -Section line A-B indicates approximate position of geological section shown in figure 1

#### **Competent Persons Statement**

The information in this report that relates to Exploration Results is based on information compiled by Dr. Andrew Tunks and represents an accurate representation of the available data. Dr. Tunks (Member Australian Institute Geoscientists) is the Company's Chief Executive Officer and has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Dr Tunks consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

#### Table 2 Assay results for target metals in TIDD002-003.

•	<ul> <li>Half core is retained for assay verification if required</li> <li>All assays for Auroch sampling completed by ALS Minerals -</li> </ul>
	All assays for Auroch sampling completed by ALS Minerals -
•	
Quality of assay data and	
laboratory tests	Romania
•	<ul> <li>Standard methods including XRF for major elements, ICP-AES</li> </ul>
	and ICP – MS and fire assay were used as appropriate
Verification of sampling & •	• For Auroch sampling blanks or field duplicates are submitted -
assaying	ALS runs internal QAQC protocols including, lab duplicates and
	standards were utilised
Location of data points •	<ul> <li>Auroch drill collars are located using DGPS</li> </ul>
•	<ul> <li>Historic Drilling was located by traditional surface and</li> </ul>
	underground survey
•	<ul> <li>Historic work has been completed on local grids however all</li> </ul>
	data will be transformed in UTM WGS 84 Zone 33 North during
	digital capture of historic records
Data spacing and •	<ul> <li>Holes were designed to test thickest portions of sulphide</li> </ul>
distribution	mineralisation defined in historic drilling
Orientation of data in •	<ul> <li>Drilling is generally vertical which is appropriate for shallow</li> </ul>
relation to geological	dipping mineralisation
structure •	······································
Sample security •	<ul> <li>Samples were collected by field geologist, numbered and</li> </ul>
	bagged, collected by DHL, and delivered to assay laboratory
Audits or reviews •	Not completed

## Section 2 Reporting of Exploration Results
